| General description | The management of the radioelectric spectrum, understood this like a natural resource, limited and scarce, pursues the most efficient use of the spectrum by means of the application of effective processes, to facilitate the implementation of communication systems and to guarantee minimum interference. To accomplish this objectives, engineering tools, planning, management and technical survey and certification are needed. Besides in this matter study of the SMATV systems and Structured Wiring are included. | | | |

Competencies

| | |
|------|--|
| Code | |
| A5 | CG5: The knowledge to perform measurements, calculations, assessments, appraisals, technical evaluations, studies, reports, task scheduling and similar work to each specific telecommunication area. |
| A6 | CG6: The aptitude to manage mandatory specifications, procedures and laws. |
| A7 | CG7: The ability to analyze and assess the social and environmental impact of technical solutions. |
| A8 | CG8: To know and apply basic elements of economics and human resources management, project organization and planning, as well as the legislation, regulation and standardization in Telecommunications. |
| A9 | CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics. |
| A30 | CE21/ST1 The ability to construct, exploit and manage telecommunication networks, services, process and applications, considered as systems of receiving, transporting, representation, processing, storage, management and presentation of multimedia information from the point of view of transmission systems. |
| A34 | CE25/ST5 The ability to select transmission antennas, equipment and systems, propagation of guided and non-guided waves, with electromagnetic, radiofrequency and optical media, and their corresponding radio electric spectrum management and frequency designation. |

Learning aims

| Expected results from this subject | Training and Learning Results |
|--|-------------------------------|
| Know and comprise the mechanisms of exploitation and management of the radioelectric spectrum. | A30 A34 |
| Capacity for the management of the radioelectric spectrum and allocation of frequencies. | |
| Capacity for the design of radioelectric stations. | |
| Knowledges for the realisation of measures of surveillance of the radioelectric spectrum. | A5 |
| Capacity for the certification of radioelectric stations according to the national rules. | A6 |
| Capacity for checking of the exposition limits to the electromagnetic fields. | A7 |
| Knowledge of the laws, regulations and relative norms to the management of the radioelectric spectrum. | A8 |
| Capacity of realisation of a work in group and its oral and written presentation. | A9 |

| Contents | |
|------------------------|--|
| Topic | |
| Introduction | Introduction to the matter. General concepts. |
| Spectrum management | National and international regulatory bodies International management and coordination National management The Telecommunications Law National telecommunication Plans CNAF |
| Spectrum engineering | Specifications of telecommunication equipmnet. Radio wave propagation. Coverage. Interferences. Re-use distance. Techniques to share the spectrum. |
| Frequency planning | Trellis method List method Other methods Examples |
| Technical surveillance | The specrrum analyzer The wideband sounder measurement procedures for radioelectric base station certification |
| SMATV | Introduction Rules Design Examples |
| Structured wiring. | Introduction Rules Design Examples |

| Planning | | | |
|---------------------------------|-------------|-----------------------------|-------------|
| | Class hours | Hours outside the classroom | Total hours |
| Laboratory practises | 1 | 2 | 3 |
| Tutored works | 3 | 45 | 48 |
| Practice in computer rooms | 6 | 6 | 12 |
| Outdoor study / field practices | 11 | 11 | 22 |
| Others | 2 | 25 | 27 |
| Master Session | 19 | 19 | 38 |

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies | |
|---------------------------------|--|
| | Description |
| Laboratory practises | Activities of application of the acquired knowledge to particular situations. Acquisition of basic skills related with the matter. Specific measurement equipment as Spectrum Analysers , Field level sounders, etc, will be used. |
| Tutored works | The student, alone or in a small group with other students, elaborates a report on a given subject. This includes the search of the information, reading, writting, etc |
| Practice in computer rooms | Activities of application of the acquired knowledge to particular situations. Acquisition of basic skills related with the matter using computer programs. |
| Outdoor study / field practices | Field activities. Activities of application of the acquired knowledge to particular situations. Acquisition of basic skills related with the matter. Specific measurement equipment as Spectrum Analysers , Field level sounders, etc, will be used. |
| Others | Written exam on the contents of the matter. |
| Master Session | Master lecture given by the teacher. |

| Personalized attention | |
|-------------------------------|--|
| Methodologies | Description |
| Master Session | The students will be able to resolve the doubts and questions of these types of teaching during the realisation of the activities, attending to scheduled meetings with the , or by means of email |

| | |
|---------------------------------|--|
| Laboratory practises | The students will be able to resolve the doubts and questions of these types of teaching during the realisation of the activities, attending to scheduled meetings with the , or by means of email |
| Tutored works | The students will be able to resolve the doubts and questions of these types of teaching during the realisation of the activities, attending to scheduled meetings with the , or by means of email |
| Practice in computer rooms | The students will be able to resolve the doubts and questions of these types of teaching during the realisation of the activities, attending to scheduled meetings with the , or by means of email |
| Outdoor study / field practices | The students will be able to resolve the doubts and questions of these types of teaching during the realisation of the activities, attending to scheduled meetings with the , or by means of email |

Assessment

| | Description | Qualification |
|---------------------------------|--|---------------|
| Laboratory practises | Realisation of the practice | 5 |
| Tutored works | Realisation of reports and presentations on CTI, Structured Cabling, , etc, that will be presented in class to evaluate the compentencie CG9.3 "Capacity to communicate, so much by writing as of oral form, knowledges, procedures, results and ideas related with the telecommunications and the electronics." | 20 |
| Practice in computer rooms | Memory of the practice | 5 |
| Outdoor study / field practices | Test at the end of the practice | 30 |
| Others | Written exam of the contents of the matter | 40 |

Other comments on the Evaluation

Following the own guidelines of the titulation, two systems of evaluation are offered: continuous evaluation and evaluation at the end of the semester.

- Continuous evaluation. The continuous evaluation will be done on the report of the computer practice and the test of the other prectices. The guided work will also be taken into account, by means of the presentation in class. The last task of the continuous evaluation is a written exam. These tasks are not recoverable and only are valid for the current course.
- Evaluation at the end of the semester. The students that do not opt by continuous evaluation will go through a written exam that will cover the theoretical part (50%) and another written exam of the practical part (50%) in the official date of examination agreed by the School.

The students will have to opt by an of the two options of evaluation before the deadline fo the memory of the first practice. Students should have completed the exercises proposed during the master classes on time if they want to opt by continuous assesment.

- Recovery in July. The students that have opted previously by continuous evaluation will be able to opt between repeating the last proof of the continuous evaluation (written examination) or to be examined again of all the matter by means of written exam that will cover the theoretical part (50%) and another written exam of the practical part (50%). They must communicate the option that they choose before the official date of the examination. The rest of the students will be examined of all the matter by means of a written exam that will cover the theoretical part (50%) and another written exam of the practical part (50%).
