General	This subject presents the main	specific technologica	al solutions for the	distribution of a	udiovisual contents over
description	telecommunication networks.	, 3			

Competencies

Code

- A3 CG3: The knowledge of basic subjects and technologies that capacitates the student to learn new methods and technologies, as well as to give him great versatility to confront and update to new situations
- A6 CG6: The aptitude to manage mandatory specifications, procedures and laws.
- A39 CE30/TEL4 The ability to describe, program, assess and optimize communication protocols and interfaces at different network architecture layers .
- A42 CE33/TEL7 The ability to program network and distributed applications and services.

Learning aims	
Expected results from this subject	Training and Learning Results
The comprehension of basic concepts in digital encoding of audio and video.	A3
The knowledge of the main standards in the field of digital encoding of audio and video.	A6
The knowledge and comprehension of the main problems raised in the transmission of audiovisual contents.	A3
The knowledge of the main protocols used for the transmission of audiovisual contents.	A6 A39
The knowledge and comprehension of the main mechanisms used to provide quality of service in Internet.	A3
The ability to analyze and develop VoIP networks.	A39 A42
The knowledge of the basic characteristics of cellular networks.	A3

Contents		
Topic		
Digital encoding of audio and video	a) Digital audio (PCM). Audio compression	
	b) Digital video. Intraframe and interframes compression	
Multimedia applications	a) Classes. Quality of service (QoS) requirements	
• •	b) Impact of delay and packet losses	
	c) Content distribution: multicast, CDNs	
	d) IP Telephony: architecture, softphones, softswitches	

Multimedia protocols	a) RTP/RTCP		
·	b) SIP		
	c) H.323		
	d) RTSP		
Providing quality of service in Internet	a) Monitoring and policing mechanisms		
	b) Scheduling and resource allocation		
	c) Differentiated Services (DiffServ)		
	d) Integrated Services (IntServ). RSVP		
Cellular networks	a) Architecture		
	b) Signalling		
	c) Mobility management		

Planning			
	Class hours	Hours outside the classroom	Total hours
Master Session	20	40	60
Practice in computer rooms	12	18	30
Tutored works	6	24	30
Troubleshooting and / or exercises	1	5	6
Jobs and projects	1	5	6
Troubleshooting and / or exercises	2	16	18

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	Exhibition of the ideas, concepts and techniques of each topic of the course. In these sessions, students must acquire competences A3, A6 and A39.
Practice in computer	Practical learning of basic tools for the distribution of multimedia contents on computer networks. In
rooms	these sessions, students must acquire competences A39 and A42.
Tutored works	Configuration, under the supervision of professors, of a basic IP PBX. This work should help to acquire competence A42.

Personalized attention

Methodologies Description

Master Session It will be dispensed individually attention during the hours of tutoring. No appointment is necessary.

Assessment		
	Description	Qualification
Troubleshooting and / or	Partial exam covering some of the contents of the subject. Questions and problems	20
exercises	of conceptual, logical, analytical or applied character. One hour long written exercise Competences A3, A6 and A39 are evaluated.	2.
Jobs and projects	Evaluation of the features and performance of the IP PBX configured by the student during the course. Competence A42 is evaluated.	20
Troubleshooting and / or exercises	Final exam covering all the contents of the subject. Questions and problems of conceptual, logical, analytical or applied character. Two hour long written exercise. Competences A3, A6 and A39 are evaluated.	60

Other comments on the Evaluation

Two different systems of evaluation will be offered to the students: continuous evaluation and evaluation at the end of the course.

Students opting for continuous evaluation must take two intermediate tasks: a short exam around week 5 of the course (20% of the final mark) and a project consisting of the configuration of a basic IP PBX around week 13 of the course (20% of the final mark), together with a final written exam at the end of the course (60% of the final mark). Both intermediate tasks are not recoverable and will be only valid for the current course.

Students can also opt for being evaluated by means of just a final written exam at the end of the course. The final mark of the subject will be, in this case, just the mark obtained in this exam.

It will be considered that a student opts for continuous evaluation if he takes the short exam or the project proposed. The final exam can contain some additional questions for those students that have opted by the evaluation at the end of the course.

If plagiarism is detected in any of the tasks proposed (exams or project), the involved students will be failed with a final mark of 0.

Those students that have not passed the subject in first call will have to take an extra written exam in July. Those students that opted for continuous evaluation will be able to choose between evaluation by means of just the final exam or keep continuous evaluation, in which case they would keep the marks obtained in the intermediate tasks (short exam and project) and only would have to take the final exam as the last task. Students will be able to indicate which of these two options choose at the final exam.
