Contents	
Торіс	
1. Introduction to optical communications	1.1. Reasons for the optical transmission1.2. Digital transmission in multimode fibres
2. Electromagnetism in dielectrics	2.1. Maxwell equations in dielectrics
5	2.1. Wave equations in dielectrics
	2.3. Refraction index and losses
	2.4. Dispersion
3. Monochromatic propagation in flat guides	3.1. Solution to the wave equation in flat guides
	3.2. Guided modes: TE and TM
	3.3. Modal power
	3.4. Normalised parameters
4. Monochromatic propagation in step index	4.1. Solution to the wave equation in step index fibres
ïbres	4.2. Guided modes
	4.3. Modal power
	4.4. Weakly guiding fibres
	4.5. Losses; transmission windows
5. Propagation of pulses in single-mode fibres	5.1. Pulse distortion in optical fibres
-	5.2. Propagation of gaussian pulses in single-mode fibres
	5.3. Propagation of analog signals in single-mode fibres
	5.4. Dispersion minimisation in single-mode fibres
6. Detection of the luminous radiation	6.1. Light detection in semiconductors
	6.2. p-i-n photodiodes and APDs
	6.3. Photonic noise
	6.4. Quantum efficiency and equivalent noise power
7. Sources and optical amplifiers	7.1. Photonic emission: basic concepts
	7.2. Light emitting diodes (LEDs)
	7.3. Semiconductor lasers (LDs)
	7.4. External modulation of the laser
	7.5. Doped fibre and semiconductor optical amplifiers
8. Digital systems based on intensity modulation	8.1. Basic concepts of digital transmission in fibre
	8.2. Digital receiver: a simplified model
	8.3. The Photonic (or quantum) limit
	8.4. Interference and equalisation in a digital receiver
	8.5. The effect of noise
9. Analog systems based on intensity modulation	9.1. Characteristics of the analog transmission, SCM systems
5,5	9.2. Signal-noise ratio
	9.3. Distortion
	9.4. Frequency planning
	9.5. Design considerations
10. Introduction to WDM and to optical networks	10.1. Introduction
	10.2. WDM systems
	10.3. Optical networks
	10.4. Basic topologies of optical networks
	10.5. FTTH
Laboratory exercise 1. Measuring the numerical aperture of a multimode fibre	Here we will measure the numerical aperture of a multimode fibre
Laboratory exercise 2. Acousto-optic modulator	Here we will built a free-space optical link that uses an AOM together with
(AOM)	an He-Ne laser.
Laboratory exercise 3. Optical amplifier	Here we will characterise an erbium doped fibre amplifier (EDFA)
Laboratory exercise 4. Electro-optic modulator	Characterisation of an electro-optic modulator
Laboratory exercise 5. Digital link based on	Here we will characterise a LED and a FP laser. Also, we will analyse the
graded index fibres	effects that losses and noise have on a digital link based on graded index
-	fibres
Laboratory exercise 6. WDM systems	Here we will characterise the performance of WDM systems working at

Methodologies	
	Description
Introductory activities	Presentation of the subject: program, bibliography, educational methodology and assessment
Master Session	system. The professor introduces the main contents of each chapter to the students. Note, however, that these lectures do not cover all the contents of each subject. For that reason, the students have to review the supplementary notes provided in class. It is also expected that the students review the concepts introduced in the classroom and expand on their contents using the guide of each chapter, together with the recommended bibliography, as a reference.
	Through this methodology the competencies CG3, CG5, CE21 and CE25 are developed.
Troubleshooting and / o exercises	r The students can solve problems and/or exercises given by the professor. These exercises are related to the contents presented in the class.
	Through this methodology the competencies CG3, CG5 and CE21 are developed.
Laboratory practises	The lectures include some exercises in the lab involving different optical devices and optical communication systems. The students have to read the lab notes provided by the professor before the lab starts. At the beginning of each exercise the professor might request that the students summarise the main concepts related to the exercise. Any doubt can be solved using the office hours of the professor.
	Through this methodology the competencies CG3, CG5 and CE25 are developed.
Projects	The students will have to complete several small projects proposed by the professor. These projects require the correct planning, design and realisation of a series of activities and are performed in groups of students. Each project has to be turned over on a given deadline.
	Through this methodology the competencies CG3, CG5, CE21, CE25 and CT3 are developed.
Presentations / exhibitions	The students will give a small presentation of the completed projects in front of the professor and possibly other students.
	Through this methodology the competency CG5 is developed.

Methodologies	Description
Master Session	The students can use the office hours of the professor to solve doubts related to the subject. The timetable of these office hours will be available at the beginning of the semester and is published on the website of the course. These office hours can be employed to solve doubts related to: 1. The concepts presented in class or included in the syllabus of the course. 2. The exercises performed in the lab. 3. The problems and/or exercises proposed for homework, as well as any other possible problems and/or exercises related to the study of the course. 4. The contents and development of the different projects.
Troubleshooting and / or exercises	The students can use the office hours of the professor to solve doubts related to the subject. The timetable of these office hours will be available at the beginning of the semester and is published on the website of the course. These office hours can be employed to solve doubts related to: 1. 	Description	Qualification	L	ining earniı Result	ng
Troubleshooting and / o exercises	r The students can solve a series of problems and/or exercises proposed by the professor.	0			
Projects	The students will have to deliver a report for each of the realised projects. Also, the students shall give a presentation of the results obtained within a certain timeframe and follow the conditions established by the professor.	25		C21 C25	D3
Short answer tests	Before the lab starts, the students will perform a test (7% of the final mark) about the contents of the lab notes. Likewise, when finalising the lab, the students will perform a test (23% of the final mark) about the lab exercises.	30	B5	C21 C25	
Long answer tests and development	At the end of the semester, the students will perform a final test that covers all the contents of the course.	45	00	C21 C25	

Other comments on the Evaluation

Following the guidelines of the degree, we will offer to the students two possible assessment systems: continuous evaluation or final evaluation at the end of the semester.

It will be considered that the students decide continuous evaluation unless they specifically request the profesor to follow a final evaluation. Such request should be done in the third week of the semester.

Continuous evaluation:

Projects

The continuous evaluation comprises a series of tasks that the student has to realise along the semester (55%), together with a long answer test (45%) that he/she performs at the end of the semester. These tasks include the completion of two short answer tests about the lab (30%), and the realisation of several projects (25%). The two short answer tests about the lab are scheduled for weeks eight and sixteen of the course. Finally, the projects have to be presented on the twelfth, fourteenth and sixteenth weeks, respectively, of the course. All these tasks may not be retaken at another point in time. That is to say, if a student cannot fulfill them within the time stipulated by the professor, there is no possibility to fulfil them afterwards. Also, they are only valid for the present academic year.

Those students who decide to opt for a continuous evaluation will have to fulfill these conditions in order to pass the course: (a) perform at least 5 out of the 6 lab exercises; (b) obtain, at least, 10 points out of 25 in the projects; (c) obtain, at least, 18 points out of 45 in the long answer test; and (d) obtain a minimum of 50 points in total (i.e., taking all the activities into account). The final mark of those students who do not fulfill these minimum requirements will be calculated as follows. It will be the minimum between: (i) the total number of points obtained by the student in all the activities of the course, and (ii) 40 points. That is to say, the maximum mark obtainable for these students is 40 points.

The choice of a continuous evaluation necessarily implies that the student is counted as present at the final evaluation, independently of whether or not the student has performed the long answer test.

Evaluation at the end of the semester:

In addition to the system of continuous evaluation described above, the student can opt for a final examination only. This final evaluation covers all the contents of the subject. The professor may demand the student to deliver some additional tasks, which will be notified by the fourth week of the course. These tasks have to be delivered on the day of the final examination. To pass the course the student will have to obtain, at least, 50 points out of 100 in the final exam together with the additional tasks.

Evaluation in July:

Those students who opted for a continuous evaluation and fulfill the requirements of (a) and (b) above, will be able, if they so wish, to keep the mark obtained in the tasks performed during the continuous evaluation (55%). In such a case, they will

only take a long answer test (45%). To pass the course, these students will have to obtain, at least, 18 points out of 45 in the long answer test, and obtain a minimum of 50 points in total.

Alternatively, these students can also opt for a final examination only, which covers all the contents of the course. In this case, the students will have to inform the professor one month prior to the final exam. Otherwise, it will be understood that the student opts for continuous evaluation.

The rest of students (i.e., those that opted for a system of continuous evaluation and do not fulfil the requirements of (a) and (b) above, and those students that opted for a final exam only) will be evaluated by a final exam only, which covers all the contents of the course.

In the case of choosing a final exam only, the professor may demand the student to deliver some additional tasks, which will be notified by one month before the exam. These tasks have to be delivered at the day of the final examination. To pass the course the student will have to obtain, at least, 50 points out of 100 in the final exam together with the additional tasks.

Sources of information

There is no single book that covers all the contents of this subject. The bibliography below is only recommended. The class notes and the additional material given during the course constitutes the exact guide for this subject.
