

## IDENTIFYING DATA

### Navigation systems and satellite communications

Subject	Navigation systems and satellite communications			
Code	V05G300V01912			
Study programme	(*)Grao en Enxeñaría de Tecnoloxías de Telecomunicación			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Optional	4th	1st
Teaching language	English			
Department				
Coordinator	Aguado Agelet, Fernando Antonio			
Lecturers	Aguado Agelet, Fernando Antonio Mosquera Nartallo, Carlos			
E-mail	faguado@tsc.uvigo.es			
Web	<a href="http://faitic.uvigo.es">http://faitic.uvigo.es</a>			
General description	The contents of this course cover the basics of satellite navigation and satellite communication systems: GPS and Galileo, the different segments of satellite communication systems, and an introduction to the planning and development standards. The course will be entirely conducted in English; the use of Spanish or Galego will be optionally allowed in the last exam.			

## Competencies

Code	
B2	CG2: The knowledge, comprehension and ability to apply the needed legislation during the development of the Technical Telecommunication Engineer profession and aptitude to manage compulsory specifications, procedures and laws.
B3	CG3: The knowledge of basic subjects and technologies that capacitates the student to learn new methods and technologies, as well as to give him great versatility to confront and update to new situations
B4	CG4: The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.
C67	(CE67/OP10) Applying conceptual, theoretical and practical tools of telecommunications in the development and applications of navigation and satellite communications systems.
C68	(CE68/OP11) The ability for selection of navigation and satellite communications systems and subsystems.
D2	CT2 Understanding Engineering within a framework of sustainable development.
D3	CT3 Awareness of the need for long-life training and continuous quality improvement, showing a flexible, open and ethical attitude toward different opinions and situations, particularly on non-discrimination based on sex, race or religion, as well as respect for fundamental rights, accessibility, etc.

## Learning outcomes

Expected results from this subject	Training and Learning Results		
To know the planning and development standards of satellite systems.	B2	C67	D3
	B3	C68	
To know the different alternatives of communication and navigation satellite systems, their different segments (space, ground and user) and the type of orbits.	B3	C67	D2
	B4	C68	D3
To know the more usual systems and services for satellite communications, including their technological capabilities and limitations.	B3	C67	D3
		C68	
To know and apply satellite navigation systems: GPS, Galileo, and other systems.	B2	C67	D2
	B3	C68	D3
	B4		

<b>Contents</b>	
Topic	
Introduction	- System definition - Standards - Regulations - Allocated frequency bands
Elements of a System	- Ground Segment - Space Segment - Launch Segment - User Segment
Introduction to Navigation Systems (GNSS)	- GPS, Galileo, Glonass, and other systems.
Architecture of the Communication Subsystems	Subsystems: - Antennas - Payload: transponders
Introduction to Satellite Communications	- Main elements in a communications payload - Signal propagation impairments - Link budget - Multibeam satellites
Satellite Communication Services	- Fixed Satellite Services (FSS) - Broadcast Satellite Services (BSS) - Mobile Satellite Services (MSS)

<b>Planning</b>			
	Class hours	Hours outside the classroom	Total hours
Master Session	21	42	63
Practice in computer rooms	13	39	52
Laboratory practises	4	8	12
Tutored works	3	9	12
Short answer tests	1	10	11

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

<b>Methodologies</b>	
	Description
Master Session	We describe the different aspects of the subject providing all the necessary educational material.
Practice in computer rooms	Every student will apply the theoretical knowledge to different practical tasks covering the main part of the contents of the subject with the help of the software suites.
Laboratory practises	Every student will apply in a practical way the different theoretical knowledge in a specific context.
Tutored works	The student will work in groups, with the support of the university lecturers, to apply, extend and personalize the contents covered in the theoretical and laboratory hours.

<b>Personalized attention</b>	
<b>Methodologies Description</b>	
Tutored works	The students will have the opportunity to attend tutorial hours with the university lecturers in the schedule that will be established and published in the subject web-page. They may also send their queries by email.

<b>Assessment</b>					
	Description	Qualification	Training and Learning Results		
Practice in computer rooms	The students will perform laboratory practice where they will work with concepts studied in the theoretical classes.	40	B3 B4	C67 C68	D3
Laboratory practises	Each student will perform field practices. The evaluation will be performed by means of a report for a total weight of 10% of the final mark.	10	B3 B4	C67 C68	D3
Tutored works	The evaluation of the group work will be taken into account as well as the understanding, maturity, importance and originality of the work and interaction between the group.	5	B3 B4	C67 C68	D2 D3
Short answer tests	A final test to evaluate the contents presented in the master sessions. The test will be individual with time limit.	45	B2 B3 B4	C67 C68	D2 D3

#### **Other comments on the Evaluation**

**At the beginning of the term, the student will choose the assessment methodology: final exam or continuous**

**evaluation.**

**Both, documentation and presentations of this subject will be exclusively in English.**

**English shall be used for writing the reports to evaluate the laboratory practices and the tutored works.**

**The students may use either English, Spanish or Galego to respond the short answer test.**

The subject will be evaluated through one of the following mechanisms:

**Final exam:**

- The exam will include questions and/or numerical problems related with the contents presented in master sessions, laboratory practices and tutored works. It will be necessary to obtain 5 points over 10 to pass the exam.

**Continuous evaluation** (the students who choose the continuous evaluation method will not be allowed to attend the final exam in the first call). The subject will be assessed throughout the entire term:

- **Laboratory practices:** each student will have to perform different tasks with a total weight of 40% of the final mark.
- **Tutored works:** each student will participate in different tutored works proposed during the lecture period. This part will be evaluated by written reports. These reports will have a total weight of 5% of the final mark.
- **Outdoor study/field practices:** each student will perform field practices. A report must be turned in to get a maximum score of 10% of the final grade.
- **Short answer test:** This exam will be the final assessment of the continuous evaluation, and it will have a total weight of 45% of the final mark.

**Make-up exam (second exam):** the student will have to take an exam which will include questions and/or numerical problems related with the contents presented in the master sessions, the laboratory practices and the tutored works (100% of the final mark). Optionally, they could take a partial exam on the contents of the master session (45% of the final mark).

**All the different grades are only valid for the current course, and will expire after the second call in case someone needs to take the course again.**
