General description The course "Development of Mobile Applications" shows an overview of the ubiquitous panorama, in particular of the mobile applications and of the different operating systems in which they run.

Mobile applications market has big growth expectations due to the huge number of active mobile devices around the world (several millions), the deployment of smart cities or the evolution of the Internet to the Internet of Everything (people, processes, data and objects).

Along the course, an example mobile application (a game) will be developed, through which the different characteristic and functionalities of the Android platform will be introduced: user interfaces, activities, services, context integration, data sharing and security.

Besides, those who join the course have to develop their own project, which should include all the phases of development of a mobile application, from the initial design to the publication in online software shops such as Google Play.

The documentation of the course will be available in English. The master sessions and the follow-up of the tutored works will be in English, as well.

Competencies

Code	
A2	CB2 Students must apply their knowledge and ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study.
A5	CB5 Students must have learning skills to allow themselves to continue studying in largely self-directed or autonomous way
B8	CG8 The ability to apply acquired knowledge and to solve problems in new or unfamiliar environments within broader and multidiscipline contexts, being able to integrate knowledge.
C33	CE46/OP16 Ability to understand the current development of mobile and ubiquitous services and market developments
C34	CE47/OP17 Ability to design, create, integrate sources of context, and working group on the development of a mobile application

Learning outcomes

Expected results from this subject	Training and Learning Results
------------------------------------	-------------------------------

Acquire an overview of the ubiquitous panorama, in particular of the mobile applications and of the different operating systems in which they run.	C33
Learn how to build mobile applications including different elements (interaction with the user, context integration, interconnection with other devices, notifications, ...)	A2 A5 B8 C34
Work in group to propose, build and defend a mobile application.	A2 A5 B8 C33 C34

Contents

Topic	
Mobile Operating Systems	- Overview of the leading operating systems for mobile devices (Android, IOS, Windows Phone). - Versions. - Market evolution.
Android Operating System	- Android architecture. - Components of an Android application: activities, services, content providers and broadcast receivers. - Applications life cycle.
Mobile applications in the market	- Planning the development of an application. - Publication of applications. - Description of mobile applications available in the market.
Building Android applications	- Android Studio SDK - Android emulator - Activities and intents - Services and notifications - Menus and preferences - User interfaces with views - Concurrency - Data persistence - Context integration: localization, sensors - Interconnection: bluetooth, wifi

Planning

	Class hours	Hours outside the classroom	Total hours
Master Session	4	4	8
Laboratory practises	12	36	48
Tutored works	4.5	49.5	54
Presentations / exhibitions	0.5	0.5	1
Multiple choice tests	1	1	2
Practical tests, real task execution and / or simulated.	3	9	12

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Master Session	The professors of the course present the main theoretical contents related to the development of applications for mobile devices.
Laboratory practises	Students will complete guided and supervised practices in the laboratory about the basic aspects of Android mobile applications.
Tutored works	In groups, design, development and test of a mobile application. Students and professors will have regular meetings to check the correct evolution of the tutored works.
Presentations / exhibitions	Presentation and defense of the mobile application that has been developed throughout the course.

Personalized attention

Methodologies	Description
Laboratory practises	The professors of the course will provide individual attention to the students during the course, solving their questions. In addition, the professors will advise and guide the students while performing their tasks, both in the laboratory and during the tutored works.

Tutored works	The professors of the course will provide individual attention to the students during the course, solving their questions. In addition, the professors will advise and guide the students while performing their tasks, both in the laboratory and during the tutored works.
Presentations / exhibitions	The professors of the course will provide individual attention to the students during the course, solving their questions. In addition, the professors will advise and guide the students while performing their tasks, both in the laboratory and during the tutored works.

Assessment			
	Description	Qualification	Training and Learning Results
Tutored works	Whenever possible, the students will be divided in groups, to design, build and test an application for mobile devices. The result will be evaluated after the delivery, taking into account key aspects such as correction, quality, performance and functionalities of the developed application. Likewise, during the development of the project, professors will make a continuous follow-up of the design and the evolution of the implementation.	45	A2 B8 C33 A5 C34
Presentations / exhibitions	At the end of the course, each group of students has to present and defend in English the developed application for mobile devices. The defence has to include a practical demonstration of the use of the application.	10	B8 C33 C34
Multiple choice tests	After each master session, students will make a multiple choice test (in English) to evaluate the understanding of the presented topics.	20	C33
Practical tests, real task execution and / or simulated.	In each practice session students will demonstrate the proper functioning of the developments carried out during the session.	25	A2 B8 C33 C34

Other comments on the Evaluation

FIRST OPPORTUNITY

Following the guidelines of the degree, two assessment systems will be offered to students attending this course: continuous assessment and final assessment. Before the end of the second week of the course, students must declare if they opt for the continuous assessment or the final assessment. Those who opt for the continuous evaluation system may not be listed as "not presented" if they make a delivery or an assessment test after the communication of their decision.

Continuous assessment system

Those students who opt for continuous assessment system must:

- Take a set of tests with multiple choice questions. These partial tests will be done at the end of each master session. These tests will account for 20 % of the overall grade of the course.
- Take a set of practical tests in the laboratory. These tests will be performed at the end of each practice session. These tests will account for 25 % of the overall grade of the course.
- Design, build and defend a mobile application (tutored work). This task will account for 55 % of the overall grade of the course. A 10 % is reserved for the presentation and defence of the developed mobile application. Though this task will be developed in groups (whenever possible), professors will make a continuous follow-up of the activities performed by each student of a group. If the performance of a student is not in line with the rest of his/her teammates, his/her expulsion of the group might be considered, or he or she might be assessed individually.

The final grade of the course will be equal to the weighted arithmetic mean of the three indicated tasks. To pass the course the final grade must be greater or equal to five.

Final assessment system

Those students who opt for the final assessment system must:

- Take a final test with short answer or multiple choice questions (a 20 % of the overall grade of the course).
- Make and demonstrate the proper functioning of the practices in the laboratory (a 25 % of the overall grade of the course).
- Design, build and defend a mobile application (tutored work), individually or if it is possible in groups (a 55 % of the overall grade of the course, with a 10 % reserved for the presentation and defence of the developed mobile application).
- Deliver a *dossier* that includes all the details about the development of the practices in the laboratory and, especially, about the tutored work.

The final grade of the course will be equal to the weighted arithmetic mean of the three indicated tasks, if the *dossier* is delivered, or zero otherwise. To pass the course the final grade must be greater or equal to five.

SECOND OPPORTUNITY

The course final exam will only be held for students who failed the course in the first opportunity.

The assessment will consist in doing one, two or three of the following tasks, depending on the marks achieved in the equivalent tasks during the first opportunity:

- Make a final test with short answers or multiple choice questions (a 20 % of the overall grade of the course).
- Make and demonstrate the proper functioning of the practices in the laboratory (a 25 % of the overall grade of the course).
- Design, build and defend a mobile application (tutored work), individually or if it is possible in groups (a 55 % of the overall grade of the course, with a 10 % reserved for the presentation and defence of the developed mobile application).
- In addition, those who opt for the final assessment system should deliver a *dossier* that includes all the details about the development of the practices in the laboratory and, especially, about the tutored work.

If the mark of any of the tasks in the first opportunity, equivalent to these, is greater or equal to five, the student can choose between keeping his/her marks of the first opportunity or repeating the assessments again.

OTHER COMMENTS

- The obtained grades are only valid for the current academic year.
- The use of any material during the tests will have to be explicitly authorized.
- In case of detection of plagiarism in any of the tasks/tests done, the final grade will be "failed (0)" and the professors will communicate the incident to the head of the school to take the measures that they consider appropriate.
