General	The main goal of this subject is to provide the foundat	ions of the synchror	nisation and comm	unication among
description				
	in centralised and distributed systems.			

Competencies

Code

- B3 CG3: The knowledge of basic subjects and technologies that enables the student to learn new methods and technologies, as well as to give him great versatility to confront and adapt to new situations
- B4 CG4: The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.
- B9 CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics.
- C33 CE33/TEL7 The ability to program network and distributed applications and services.
- D2 CT2 Understanding Engineering within a framework of sustainable development.
- D3 CT3 Awareness of the need for long-life training and continuous quality improvement, showing a flexible, open and ethical attitude toward different opinions and situations, particularly on non-discrimination based on sex, race or religion, as well as respect for fundamental rights, accessibility, etc.
- D4 CT4 Encourage cooperative work, and skills like communication, organization, planning and acceptance of responsibility in a multilingual and multidisciplinary work environment, which promotes education for equality, peace and respect for fundamental rights.

Learning outcomes				
Expected results from this subject		Training and Learning Results		
The ability to program network and distributed applications and services.	B4 B9	C33		
The knowledge of basic subjects and technologies that capacitates the student to learn new methods and technologies, as well as to give him great versatility to confront and update to new situations	В3		D2 D3 D4	
The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.	B4 B9	C33		

Contents

Topic			
Introduction to Concurrent Programming	Concepts of concurrence, parallelism and multitasking. Interleaving of atomic instructions.		
	Precedence graphs.		
The critical section problem	The definition of the problem.		
•	Busy waiting.		
	Starvation		
	Deadlock.		
	Dekker´s algorithm.		
	Peterson's algorithm		
Concurrent Programming Constructs	Semaphores.		
	The problem of the producer-consumer.		
	The problem of the philosophers.		
	Monitors.		
	Variables of Condition.		
	The problem of the readers-writers.		
Deadlock	Introduction and definition of deadlock.		
	Necessary conditions.		
	Deadlock prevention.		
	Deadlock avoidance.		
	Detection and Recovery		
Communication among processes	Message Passing.		
	Remote Procedure Call (RPC).		
Distributed Programming	Introduction to Distributed Systems.		
	Distributed mutual exclusion		
	Ricart-Agrawala Algorithm.		
	Token ring Algorithms.		
	Consensus:		

Planning			
	Class hours	Hours outside the classroom	Total hours
Workshops	5	30	35
Practice in computer rooms	13	26	39
Master Session	20	46	66
Multiple choice tests	1	0	1
Practical tests, real task execution and / or simulated.	1	0	1
Jobs and projects	2	6	8

Crash Failures. Byzantine Failures.

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies		
	Description	
Workshops	Each group of students will tackle the design and implementation of a software project with half complexity. This task will be realised in successive steps, that will be discussed and validated in th face-to-face sessions. The aim of this methodology is to provide a suitable feedback to improve the proposed solutions. This methodology deals with skills CG4 and CG9	
Practice in computer rooms	The students will resolve practical problems under supervision of teachers This methodology deals with skill CE33/TEL7	
Master Session	Presentation of the ideas, concepts, technics and algorithms of each lesson.	
	This methodology deals with skill CG3	

Personalized attention			
Methodologies	Description		
Master Session	By means of tutoring		
Workshops	Part of the sessions devote to resolve individual questions with each student by means of individual questions so much by part of the professor as of the student		
Practice in computer rooms	Of complete way for the students that do the practices of individual way, and by means of the resolution of individual questions with each student by means of questions *individualizadas so much by part of the professor as of the student		

Assessment		0 1:6: 1:	_		
	Description	Qualification		Training and Learning Results	
Multiple choice tests	Proof of theoretical contents exposed in the master classes.	50	B3 B4	C33	D2
Practical tests, real task execution and / or simulated.	Evaluation of the work realised in each one of the sessions of laboratory	20	B3 B4	C33	D2 D3
	For the individual evaluation of each student will realise personalised questions in each one of the sessions.				
Jobs and projects	In the last face-to-face session of workshop, students will deliver and will expose to their mates the design and the proposed solution for their project. This solution will be exposed to debate for students and professors	30	В9	C33	D3 D4
	For the individual evaluation of each student will realise personalised questions in each one of the sessions.				

Other comments on the Evaluation

The subject can be surpassed by means of Continuous Evaluation according to the following criteria, having opened the possibility to opt by the No Continuous Evaluation anytime until the beginning of the final examination to celebrate the day fixed to such effect in the official calendar of the EET. All those students that opt by the continuous evaluation will consider presented if they evaluate of the part of the work in Workshops.

Continuous evaluation:

The final note will result of the sum of the corresponding notes to the three following components:

1. Four proofs of type Test to evaluate the contents given in the masterclasses. Each proof will take place in one of the master classes, except the last that will realise in one of the sessions of the Workshop.

Punctuation: Up to 1,25 points each proof.

2. Six Practical Proofs that will realise when finalising each one of the sessions of laboratory and that will consist in the validation of the results obtained during said session.

Punctuation: Up to 1/3 points each proof.

3. Presentation of the Project proposed like work in the sessions of the Workshop.

Punctuation: Up to 3 points.

To pass the subject by Continuous Evaluation will have to give the three following conditions: (i) obtain an equal or upper qualification to 2 points in the group of the tests.; (ii) Upper qualification to 0 points in, at least, four of the six practical proofs; and (iii) to attend all the face-to-face sessions and obtain more than 0 points in the presentation of the project.

No Continuous Evaluation:

By means of an examination on 10 points scheduled in the official calendar of the EET.

Final Call:

It will be governed by the indicated for the No Continuous evaluation.
