
IDENTIFYING DATA				
Imaging Systems				
Subject	Imaging Systems			
Code	V05G300V01633			
Study programme	Degree in Telecommunications Technologies Engineering			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Optional	3rd	2nd
Teaching language	Spanish			
Department				
Coordinator	Martín Rodríguez, Fernando			
Lecturers	Docio Fernández, Laura Martín Rodríguez, Fernando			
E-mail	fmartin@uvigo.es			
Web	http://faitic.uvigo.es			
General description	In this course we study several families of image systems, including computer vision, remote sensing and medical imaging.			

Competencies	
Code	
B3	CG3: The knowledge of basic subjects and technologies that enables the student to learn new methods and technologies, as well as to give him great versatility to confront and adapt to new situations
B10	CG10 The ability for critical reading of scientific papers and docs.
C34	CE34/SI1The ability to construct, exploit and manage telecommunication services and applications, such as receiving, digital and analogical treatment, codification, transporting and representation, processing, storage, reproduction, management and presentation of audiovisual and multimedia information services.
C66	(CE66/OP9) The ability for selection of circuits, subsystems and systems of remote sensing.

Learning outcomes		
Expected results from this subject	Training and Learning Results	
Know most common imaging (capture) systems for medical diagnosis, essay and remote sensing.	B3 B10	C34 C66
Understand the principles of operation of such systems.	B3 B10	C34 C66
Knowledge about the capabilities and limitations of such systems.	B3 B10	C34 C66
Knowledge about the most common applications of such systems.	B3 B10	C34 C66

Contents	
Topic	
Image acquisition using cameras.	Camera concept, principles of operation, camera types. Monochrome cameras, color (Bayer and triple CCD). Field and linear cameras. Frame grabbers, multi-camera systems (mono/stereo). Capture Parameters: shutter speed, aperture and sensitivity (ISO). Influence in obtained results. Illumination systems (studio lighting, color temperature, hard and soft light, LED, Laser, fluorescent).

Medical imaging and non destructive testing (NDT).	Generation of ultrasonography, X-ray, computerized axial tomography, nuclear magnetic resonance and positron emission tomography. Processing of images and/or signals aimed to obtain diagnostic quality images.
Aerial, satellite and proxy remote sensing systems.	Acquisition, processing and applications of panchromatic images, single-band, multispectral and hiperspectral, active and passive in UV/VIS/SWIR/NIR/FIR/Thermal/GHz, Radar and Lidar. Geometrical correction, registration and geo-referenciation.

Planning

	Class hours	Hours outside the classroom	Total hours
Practice in computer rooms	12	36	48
Tutored works	8	40	48
Master Session	21	21	42
Reports / memories of practice	0	11	11
Multiple choice tests	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Practice in computer rooms	After theoretical classes, the lecturer defines some practical exercises to be started just at the moment and to be continued later via autonomous work. Related competencies: CG3, CG10, CE34, CE66.
Tutored works	It consists of supervision of small projects initiated in computer lab classes. This initial works are enhanced though reading and analysis of related technical documentation and defining new objectives that will be implemented by students. Related competencies: CG3, CG10, CE34, CE66.
Master Session	Presentation by the teacher of subject contents, encouraging the critical discussion of the concepts. Related competencies: CG3, CG10, CE34, CE66.

Personalized attention

Methodologies	Description
Practice in computer rooms	Assistance in place, appointment for office work. Querry and answer via e-mail.
Tutored works	Appointment for office work. Querry and answer via e-mail.

Assessment

	Description	Qualification	Training and Learning Results	
Practice in computer rooms	They are the beginning of the tutored works. They do not have a grade percentage assigned because they will be implicitly assesed through the submited final reports.	0	B3 B10	C34 C66
Tutored works	Works that continue the exercises started in computer class. They do not have a grade percentage assigned because they will be implicitly assesed through the submited final reports.	0	B3 B10	C34 C66
Reports / memories of practice	They are the final result of the tutored works. For each work (or small project), the lecturers will establish a "soft" deadline. This means that if it is delivered within the first deadline, the author wins the right to submit a second version (improvement). The second version will have to be delivered in the 10 days following the publication of the first version marks. Structure of the improved report will have to be: first, the former text foloowed by an annex that describes the new enhancements. If works are noit delivered in the first proposed date, students will still be able to deliver it. ALWAYS before the end of class period. When a student delivers a practical work is choosing the option of continuous evaluation. This means that his final grade will be the average of his works. Depending on the works proposed, the lecturers will be able to decide the weight in the final grade for each. Team work (two people teams), same qualification for both students.	80	B3 B10	C34 C66
Multiple choice tests	Students choosing continuous evaluation will be required to take this test that will convey 20% of the whole qualification.	20	B3 B10	C34 C66

Other comments on the Evaluation

Those students that have not delivered any practical work and, therefore, do not use the procedure of continuous evaluation will take a final exam on all contents seen in the subject. This exam will take place in the classroom and date approved by the school board. The examination will include all the studied issues in theoretical classes and also the works proposed this year (the lecturers could ask questions about additional recommended bibliography and/or the methods that recommend for practical works implementation).

Extraordinary assesment will consist of a single exam for those students that have not passed neither the continuous evaluation nor the final exam. The final grade in this subject will be that one derived from the extraordinary exam in both cases. This extraordinary final examination will be graded between 0 and 10 points, and it will include all topics in the subject (including the practical works, as in the may exam). To passs, the student has to achieve, at least, five points.

Notice that there are not two calls, but there is only one. Although there are two final examinations.

In addition to this bibliography, the lecturers will provide (through the faitic platform) the following material:

- Scripts for theoretical classes (slides).

- Requirements documentation for the tutored works.

- In the tutored works, lecturers could provide bibliography: tutorials, papers... They will be made available through faitic either directly (in PDF format) or through Internet links.
