General	In this subject the student will learn to c	lesign audiovi	sual systems.with	respect to soun	d take and sound
description	reinforcement, image take and visual co				
·	outdoor applications of audiovisual netw				
Competer	ncies				
Code					
B1 CG1:	The ability to write, develop and sign proj	ects in the fie	ld of Telecommun	ication Engineer	ing, according to the

knowledge acquired as considered in section 5 of this Law, the conception and development or operation of networks, services and applications of Telecommunication and Electronics.

B6 CG6: The aptitude to manage mandatory specifications, procedures and laws.

B9 CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics.

B12 CG12 The development of discussion ability about technical subjects

C36 CE36/SI3 The capacity to implement projects at places and installations for the production and recording of audio and video signals.

C38 CE38/SI5 The ability to create, modify, manage, broadcast and distribute multimedia contents taking into account the use and accessibility criteria to audiovisual, broadcasting and interactive services.

D4 CT4 Encourage cooperative work, and skills like communication, organization, planning and acceptance of responsibility in a multilingual and multidisciplinary work environment, which promotes education for equality, peace and respect for fundamental rights.

Learning outcomes

Expected results from this subject	Training and Learning		
		Results	
Understand which elements have an influence on audiovisual quality.		C36	
		C38	
Design a system of sound take and sound reinforcement given a certain enclosure, comparing	B1	C36	
different subsystems and elements.	B6		
Create atmospheres addressing acoustic and visual appearances	B12	C36	
Design the wiring and connections of an audiovisual network for his control and supply	B1	C36	
	B6	C38	
Analyse different indoor and outdoor applications of Audiovisual Networks.		C36	
		C38	
Apply and analyse distinct multimedia systems: videoconference, streaming, audiovisual	B6	C38	
databases, synchronisation, metadata processing, exchange of multimedia contents.	B12		

	but a project, including the following: B6 tion, interpret technical specifications of equipment, discuss B9 B12	
options and select a combination of certain equipment. * use of theoretical calculations and simulation software tools to support the design of sound		

Jpp Igi

systems and visual coating. * conduction of meetings, discussion of partial results and oral presentation of a definitive work in front of a demanding audience.

* writing of progress reports, minutes of meetings and a final technical report.
* adaptation to new environments, management of internal roles in the group and conflict. resolution.

Contents	
Торіс	
Sound reinforcement	Sizing and distribution in the processes of take and presentation of sound
Visual overlay	Design of systems of visual take and presentation indoor and outdoor. Sizing and distribution of the visual coverage, in the processes of take and presentation
Connections and supply	Design of the wiring and connecting of an audiovisual network and his supply. Audiovisual networks, indoor and outdoor applications.
Synchronisation and control	Synchronisation of audio and video signals in an audiovisual network. Control systems. Audiovisual quality: sound/image interaction. Ambient creation addressing visual and acoustic issues
Multimedia systems	Videoconference, streaming, audiovisual databases, synchronisation, metadata procesing, exchange of multimedia contents

Methodologies	
	Description
Practice in computer	Use and adjustment of analysis tools and algorithms, identifying which one should be used in each
rooms	situation.
	With this methodology they work the CE36 competence.
Projects	Collaborative work in reduced groups on a complex design that applies several topics covered in the subject. The work is periodically followed-up and it fosters working in group, role sharing, information sharing, planning and public defending of results. With this methodology they work the CG1, CG6, CG9, CG12, CE36, CE38 and CT4 competences.
Master Session	Presentation by the teacher of the contents of the subject, fostering the critical discussion of the concepts. The theoretical grounds of algorithms and procedures used to resolve problems are given. With this methodology they work the CG1, CG6, CG12, CE36 and CE38 competences.

Personalized attention				
Methodologies	Description			
Master Session	Doubts can be solved in the rests of the classes and in the teacher tutorial sesions. These tutorial sessions will be done individually or in short groups (with a maximum of 2-3 students). The tutorial sessions are typically agreed with the professor. The meetng requests can be done personally or by email. The tutorial sessions are preferably done in the schedules and place officially reserved for them.			
Practice in computer rooms	In the classes of practices is a good moment to consult doubts with the professor. The professor moves between the tables and some students take advantage of the proximity of the professor to consult doubts of the own class or punctual doubts of other classes.			
Projects	The projects have its own classes of C group in which the students of each team consult their doubts about the project and the professor is with them helping to define the project and giving them support for the development of their particular project. They are classes with a very pleasant interaction.			

D4

Assessment					
	Description	Qualification		ining a ning Re	
Projects	Assessment of a project, developed through the four-month period, including the preparation and public presentation of a report. The corresponding individual mark to the works done in group is obtained as a ponderated sum of: 1) the common mark of the group (60%); 2) the individual mark (40%), obtained from one or various of the following methods of evaluation: cross-evaluation by the other members of the group, oral questions during the presentations of the works, written questions about the content of the work.	40	B1 B6 B9 B12	C36 C38	D4
Short answer tests	Assessment of a written exam, with brief questions and problems.	50	B1 B6 B12	C36 C38	
Reports / memories of practice	Assessment of a written inform that describes the work of several weeks in the computer classroom.	10		C36	

Other comments on the Evaluation

Following the study programme guidelines, the student can choose between two assessment methods: CONTINUOUS ASSESMENT, that is the recommended method linked to the educational activities and NON CONTINUOUS ASSESSMENT, only recommended for those students which can not follow the first method.

CONTINUOUS ASSESSMENT

The continuous assessment consists of the tests detailed in the following. The student opts by the continuous assessment method once she/he signs the document of commitment that will be available at week 1-3, so that she/he can begin the work in the corresponding group. Once signed, it is assumed that the student has taken the examination session and will be given the mark resulting of the application of the criterion detailed in the following, regardless of wheter she/he takes the final exam or not.

Types and assessment of activities:

Reports of the practical sessions (Weight: 10%): will be assessed around weeks 6 and 11.

Projects (Weight 40%): will be assessed around week 12. The individualized part of the assessment will be done through cross-evaluation, oral questions during presentations, and/or written exam questions.

Proof of short answer (Weight: 50%): it coincides with the final exam date. It includes all the contents of the subject.

The final note corresponds to the sum of the marks obtained in all the activities weighted by the corresponding percentages. The student should obtain, at least, a grade of 4 points over ten in each type activity, and a final grade of 5 points to pass the subject. If in any of the activities the grade does not reach 4 but the average exceeds 5, the final grade will be 4.

NON CONTINUOUS ASSESSMENT

If the student does not sign the document of commitment, she/he will be evaluated through a final examination in the official date assigned by the Centre. This exam will consist of two parts, of equal weight in the final mark: a written part that may include all the topics of the subjet, and an oral part relative to additional work. This additional work should be presented previously to the teacher. The student may take part in the continuous assessment activities of the practical sessions, but they will not be assessed in her/his case. The additional work to deliver will be specified in week 6 of term, and will have to be delivered to the teacher a week before the final exam.

The student should obtain, at least, a grade of 4 points over ten in each type activity, and a final grade of 5 points to pass the subject.
