General	Embedded systems are part of almost a				
descriptio	n the mobile phone, the car). This cours				
	include an operating system, and puts t		ce through a series	s of exercises ar	id projects. The
	documentation will be provided in Engli	sn.			
Compete	encies				
Code					
tech	The knowledge of basic subjects and tech nologies, as well as to give him great versa	atility to confr	ont and adapt to n	ew situations	
know	: The ability to solve problems with initiative vledge and skills, understanding the ethication of the state				
	neer activity.				
	: The ability to work in multidisciplinary gro y, knowledge, procedures, results and idea				
C87 (CE8	7/OP30) The ability to understand the spe	cific requirem	ents for integrated	circuits with str	ict real time restrictions.
C88 (CE8	8/OP31) The ability to formulate and solve	problems of o	design and develop	oment of integra	
D2 CT2	Understanding Engineering within a frame	work of sustai	nable developmer	it.	

D3 CT3 Awareness of the need for long-life training and continuous quality improvement, showing a flexible, open and ethical attitude toward different opinions and situations, particularly on non-discrimination based on sex, race or religion, as well as respect for fundamental rights, accessibility, etc.

D4 CT4 Encourage cooperative work, and skills like communication, organization, planning and acceptance of responsibility in a multilingual and multidisciplinary work environment, which promotes education for equality, peace and respect for fundamental rights.

Learning outcomes

Expected results from this subject	Trai	ning and Resul	Learning ts
Know the technological base which supports the most recent investigations in the study and design of integrated systems.	B3	C87	
Understand the basic aspects of the special requirements inherent to embedded systems with hard real time restrictions	B3	C87	D3
Adopt a global view of the problem of programming environments with real-time restrictions, and	B3	C88	D2
know the proper tools for dealing with them, so that embedded systems can be addressed with a	B4		D4
system level approach.	B9		
Understand the basic elements of fault prevention and fault tolerance	B3	C88	

Master the concepts related to the organisation of this kind of systems software	B3 B4 B9	C88	D4
Handle the tasks scheduling and resources sharing techniques in embedded systems	B3	C88	
	B4		
Become familiar with the use of abstraction platforms for developing embedded systems	B4	C88	
	B9		

Contents	
Торіс	
Concept of embedded system	Definition of embedded system
	Real-time systems
	Characteristics
Operating systems for embedded systems	Operating systems with real-time restrictions
	Multitasking: threads and processes
	Synchronization
Architectures of embedded systems	ARM, MIPS
	Microprocessors
Process scheduling	Cyclic executives
	Priority-driven scheduling: DMS, EDF
	Access synchronization
Reliability and fault tolerance	Fault prevention and fault tolerance
	Static and dynamic redundancy
	Security, reliability and dependability
Distributed embedded systems	Communication mechanisms

Methodologies Description Presentations / Presentation by the students of the developed projects results. Through this methodology the competencies CT2, CT4, CG4, CG9, CE87 and CE88 are developed. exhibitions Laboratory practises Development by the students of guided and supervised assignments in the laboratory. Through this methodology the competencies CT2, CT3, CG3, CG4, CE87 and CE88 are developed. Group tutoring Meetings of the professors with the students for tracking the current status and further planning the project activities. Through this methodology the competencies CT2, CT4, CG4, CG9, CE87 and CE88 are developed. Integrated We use learning projects based training: the students carry out a project along the semester to methodologies resolve a complex problem by means of planning, design and implementation of a series of activities. Through this methodology the competencies CT2, CT3, CT4, CG3, CG4, CG9, CE87 and CE88 are developed. Master Session Professors present the main theoretical contents related to embedded systems with real-time restrictions. Through this methodology the competencies CT3, CG3, CE87 and CE88 are developed.

If the intermediate results are not satisfactory, a penalization of the 20% of the grade could be applied. The evaluation will be by group and by person: each one of the members of a team must document his/her tasks and answer the questions	10	Le R B9 B3 B4 B4 B9 B3 B4 B9	and arning esults C87 C87 C88 C87 C88 C87 C88

Other comments on the Evaluation

In order to pass the course it is necessary to complete the different parts of the subject (master sessions, practices in labs, and projects). The final grade will be the **weighted geometric mean** of the grades of the different parts (i.e. it is not possible to pass the subject with a zero in one part). If "x" is the grade obtained for the master sessions, "y" for the practices in labs, and "z" for the project, the final grade will be: grade = $x^0.4*y^0.1*z^0.5$

During the first month, students must provide a written declaration to opt for final assessment. In other case, it will be considered that they opt for continuous assessment. Students who select continuous assessment and submit the first task or questionnaire may not be listed as "Absent".

Students who opt for the final assessment procedure must pass the short answer test (40%), submit a project (50%) and submit the laboratory practises (10%). These parts will be evaluated as indicated in the tests description section. The final grade will be the **weighted geometric mean** of the grades of the different parts. Besides, they must submit an additional dossier with detailed information about the events and issues that arose during the execution of the different tasks, and especially the project. In addition, during the first month of the course, professors will notify students who opted for final assessment if they have to do the tutored work individually.

Although the project will be developed in groups, the ongoing activities of each student in a group will be monitored individually. In case a student's performance is below his or her groupmates, he or she could be expelled from the group or graded on a individual basis.

Intermediate milestones could be required for the project. In case they are not satisfied, a penalization of the 20% of the grade could be applied.

Second opportunity to pass the course

The end of course exam will only be held by students who failed the end of semester exams.

In order to pass the course it is necessary to complete the different parts of the subject: pass the short answer test (40%), submit a project (50%) and submit the laboratory practises (10%). These parts will be evaluated as indicated in the tests description section. The final grade will be the **weighted geometric mean** of the grades of the different parts. Besides, it will be necessary to submit an additional dossier with detailed information about the events and issues that arose during the execution of the different tasks, and especially the project.

Students that have opted by the continuous assessment procedure, can decide to maintain the grades of the parts they have already passed in the first opportunity or discard them.

Other comments

The grades obtained are only valid for the current academic year.

Although the tutored work will be completed (if possible) in groups, each student should keep a record of his or her activities. In the case in which the performance of a member of the group wouldn't be adequate compared with the performance of his or her team mates, he or she could be excluded from the group and/or qualified individually.

The use of any material during the tests will have to be explicitly authorized.

The assessment will be performed in any of the official languages in Galicia. If a student wishes to be tested in English, it must give written notice to teachers with 15 days in advance.

In case of detection of plagiarism or unethical behavior in any of the tasks/tests done, the final grade will be "failed (0)" and the professors will communicate the incident to the academic authorities to take the appropriate measures.
