

## IDENTIFYING DATA

### Remote sensing

Subject	Remote sensing			
Code	V05G300V01911			
Study programme	Degree in Telecommunications Technologies Engineering			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Optional	4th	1st
Teaching language	English			
Department				
Coordinator	Cuiñas Gómez, Íñigo			
Lecturers	Cuiñas Gómez, Íñigo Díaz Otero, Francisco Javier Martín Rodríguez, Fernando Torío Gómez, Pablo			
E-mail	inhigo@uvigo.es			
Web	<a href="http://fatic.uvigo.es">http://fatic.uvigo.es</a>			
General description	<p>Remote Sensing is the topic devoted to all systems that allow the collection of data about object or surface characteristics without physical contact.</p> <p>This topic presents the basic principles of Remote Sensing, both in visible and infrared spectrum, and in microwaves. Special care will be put on active and passive sensors, with a deep explanation of RADAR and optic-electronic systems.</p> <p>The topic involves technological elements and signal processing, with a focus on the applications.</p> <p>The topic is going to be taught in English.</p>			

## Competencies

Code	
B3	CG3: The knowledge of basic subjects and technologies that enables the student to learn new methods and technologies, as well as to give him great versatility to confront and adapt to new situations
B4	CG4: The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.
B7	CG7: The ability to analyze and assess the social and environmental impact of technical solutions.
B9	CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics.
C65	(CE65/OP8) Applying conceptual, theoretical and practical tools of telecommunications in the development and applications of radar and remote sensing systems.
C66	(CE66/OP9) The ability for selection of circuits, subsystems and systems of remote sensing.
D2	CT2 Understanding Engineering within a framework of sustainable development.
D3	CT3 Awareness of the need for long-life training and continuous quality improvement, showing a flexible, open and ethical attitude toward different opinions and situations, particularly on non-discrimination based on sex, race or religion, as well as respect for fundamental rights, accessibility, etc.
D4	CT4 Encourage cooperative work, and skills like communication, organization, planning and acceptance of responsibility in a multilingual and multidisciplinary work environment, which promotes education for equality, peace and respect for fundamental rights.

## Learning outcomes

Expected results from this subject	Training and Learning Results		
Identify and analyse problems that can be solved with Remote Sensing techniques	B3 B4 B9	C65	D4
New			

Propose solutions based on RADAR, microwaves, infrared, LIDAR or visible spectrum observation	B3 B4 B9	C66	D3 D4
Specify sensors and Remote Sensing systems more adequate for each application	B3 B7	C65 C66	D2
Interpret and analyse images taken from satellites	B3 B4 B7	C65	D2

## Contents

### Topic

Introduction to Remote Sensing	<p>The aim of this topic is to provide the students with a panoramic of the meaning and application of remote sensing of earth, sea and air. Special attention is given to different points of view between our usual perception of the Earth and its appearance when it is observed from a satellite or another airlifted platform. Besides, the subject shows the historical evolution of Remote Sensing and its implication in the human life, standing out the hits of the space exploration and the different programs that have been designed.</p> <p>The contents given in group A have an autonomous activity associated, called "The Earth from the air/space".</p>
Fundamental concepts	<p>The three fundamental concepts of Remote Sensing are the core of this topic: the spectral signature, the classification and the compositions of color. All these are explained after an introduction to the multispectral sensors.</p>
Sensors	<p>Explanation of the concept of sensor, introduction to the distinct types of sensors, the concept of resolution and calibration. Then, there is at least a session of two hours devoted to the passive sensors (optical-electronic, thermal and radiometers of microwaves) and another session to the active sensors (RADAR and LIDAR). This explanation includes the foundations and operation, its characteristics, advantages and inconvenient and applications.</p> <p>The contents given in group A have several associated practices of laboratory (group B), those called "Sensors calibration", "Passive Sensors: infrared", and "RADAR Fundamentals".</p>
Processing, interpretation and formation of images	<p>This section is a summary of the distinct techniques of processing applied for interpreting and classifying images taken from satellites. It employs an image example to which all different processing techniques are explained. The subject also takes care of the formation of images of big regions of the surface of the Earth from images of areas more reduced, by means of the use of mosaics. It shows the process of the mosaic both from satellite and airborne images.</p> <p>All the contents are given in laboratory (group B), for four sessions of 2 hour each. Besides, the works developed in group C will support the contents of this chapter.</p>
Geographic Information Systems (GIS)	<p>It treats to introduce the foundations and applications of the GIS, orienting all the exhibition to the support in the decisions process related with geographic locations. The second part of the session devotes to deepen in the knowledge of applications of GIS by means of the study of practical cases.</p>
Terrestrial exploration	<p>This section devotes to some examples of applications of the Remote Sensing in diverse fields: studies of the ground, agriculture, mining, geology. The own actuality at teaching time can determine the applications in which more upsetting is done.</p> <p>The contents given in group A could have associated some of the works developed by students in groups C, depending on the focus of each group challenge.</p>

## Meteorology and Oceanography

In this section, the applications that more satellites have used along the history of Remote Sensing are presented: the meteorology and the oceanography. In Meteorology, it indicates which types of sensors employ, analyses the different parameters of interest, the characteristics regarding resolution and the results of climatic studies along the planet. Regarding Oceanography, the subject focuses on the observed parameters, the sensors, and it also presents images that show the results of the observations both directly and after the application of distinct processed.

The contents given in group A could have associated some of the works developed by students in groups C, depending on the focus of each group challenge.

Space exploration  
The aim of the subject is to present a panoramic of the space exploration. Beginning with the sensors employed along the years of history of the humanity in the space, the subject shows the main knowledges that we have obtained from the distinct bodies of the solar system and it explains how they arrived to this knowledge (missions, peculiarities of the ships and sensors employed, etc.).

### Planning

	Class hours	Hours outside the classroom	Total hours
Master Session	17.2	25.8	43
Laboratory practises	4	8	12
Practice in computer rooms	10	15	25
Tutored works	5	45	50
Presentations / exhibitions	2	4	6
Autonomous practices through ICT	0	2	2
Introductory activities	1	1.2	2.2
Short answer tests	2.8	0	2.8
Systematic observation	0	2	2
Jobs and projects	0	5	5

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Master Session	The course topics are presented and developed by the lecturer: foundations, theoretical bases, applications, etc.  Group A sessions. 1 session/week. 2 hours/session  Through this methodology the competencies CE65, CE66, CT2, and CG3 are developed.
Laboratory practises	Experimental work on sensor calibration and infrared termography.  Group B sessions. 2 sessions/semester. 2 hours/session.  Through this methodology the competencies CE65, CE66, CT4, and CG4 are developed.
Practice in computer rooms	Computer-based work on radar fundamentals and satellite imagery processing and interpretation.  Group B sessions. 5 sessions/semester. 2 hours/session  Through this methodology the competencies CG4, CG7, CG9, CT4, and CT3 are developed.
Tutored works	The students will be assigned a simulation project. They will developed the project working in groups of 5-7 students. Project class sessions will be devoted to discussion and follow-up of the project.  Group C sessions. 6 sessions/semester. 1 hour/session.  Additional tutorial sessions will be scheduled if required.  Through this methodology the competencies CG4, CG7, CG9, CT4, and CT3 are developed.

Presentations / exhibitions	<p>The students will present, in an open session, their project results.</p> <p>Previously, the students must e-mail to their group C teacher the code developed and a report summarizing the results.</p> <p>Group C sessions. 1 session/semester. 1 hour/session.</p> <p>Through this methodology the competency CG9 is developed.</p>
Autonomous practices through ICT	<p>Activities to be autonomously developed, with software provided by means of FaiTIC platform: "Earth from air/space", to learn about points of view.</p> <p>This methodology works on competences CE65 and CE66</p>
Introductory activities	<p>Activities directed to take contact and gather information on the students, as well as to present the topic.</p> <p>For this activity reserves one face-to-face hour of group A, in which the professor presents the topic, explain the practices of laboratory and computer, and what expects of the works in group C.</p> <p>This methodology works on competences CE65, CE66, and CG4</p>

### Personalized attention

Methodologies	Description
Introductory activities	Time that each professor has reserved to attend and resolve doubts of the students
Master Session	Time that the lecturer of group A has reserved to attend and resolve doubts of the students
Laboratory practises	Time that the lecturer of groups B can use to help the students understand the lab practices and to resolve doubts.
Practice in computer rooms	Time that the lecturer of groups B can use to help the students understand the lab practices and to resolve doubts.
Tutored works	Time that the lecturer of groups C can use to provide support to the tutored groups, additional to the scheduled meetings.
Presentations / exhibitions	Time that the lecturer of groups C can use to help the students in preparing their results presentations.
Autonomous practices through ICT	Time that the lecturer of group A will use to attend the students that need some support in doing their autonomous work.

### Assessment

	Description	Qualification	Training and Learning Results
Master Session	<p>Proofs of short answer: there will be four proofs, at dates informed to the students at the beginning of the academic year, of 10 minutes length, that allows the student to pass part of the matters.</p> <p>In these short proofs the skills CE65, CE66, CG3 and CG7 will be evaluated.</p>	40	B3 C65 B7 C66
Laboratory practises	<p>Systematic observation: During laboratory practices, the results and the demonstration of having understood the procedure to arrive to them will be evaluated:</p> <ol style="list-style-type: none"> <li>"Sensors calibration": 5%</li> <li>"Infrared thermography": 10%</li> </ol> <p>In these practices the skills CE66, CT3, CG4 and CG9 will be evaluated.</p>	15	B4 C66 D3 B9
Practice in computer rooms	<p>Systematic observation: During the computer practices, the results and the demonstration of having understood the procedure to arrive to them will be evaluated:</p> <ol style="list-style-type: none"> <li>"Foundations of RADAR": 7%</li> <li>"Image Processing": 13%</li> </ol> <p>In these practices the skills CE65, CT2 and CG4 will be evaluated.</p>	20	B4 C65 D2

Tutored works	The works developed in C groups will be evaluated in two parts: the own dynamics of the works and the presentations.  The work itself will receive 15% of the final mark of the subject. Each of the members of the work would receive the same mark, as each of them is co-responsible of the development.  In these works the skills CE66, CG7 and CG9 will be evaluated.	15	B7 B9	C66
Presentations / exhibitions	Presentations of the works developed by the groups C.  After the presentation, the lecturers will ask questions, individually, to the members of the group. The mark of this part will be given individually, depending on the demonstrated knowledge of each member of the group, and will represent 7% of the total subject mark.  In the presentation of the works the skills CG9 and CT4 will be evaluated.	7	B9	D4
Autonomous practices through ICT	Students will give the lecturer their autonomous work results: "The Earth from the air/space": 3%  In these practices the skills CE65 and CG4 will be evaluated.	3	B4	C65
Short answer tests	The final examination, in case to have to do it, will consist of 10 questions of short answer, with questions related with the classes of theory, of laboratory and the presentations of the works, and will cost by 100% of the note of the topic.	0	B3 B4 B7 B9	C65 D2 C66 D3 D4

### Other comments on the Evaluation

**The course language is English. Tests, reports and exams should be written in English.**

Evaluation and grading.

The students can chose any of the following assessment systems:

1.-**Continuous assessment.** This consist of the following activities

- 1.1. Four quizzes. They account for 40%of the final grade.
- 1.2. Performance at lab classes. It accounts for a 35% of the final grade.
- 1.3. Simulation project results andreport. 15% of the grade.
- 1.4. Project presentation. 7% of thegrade.
- 1.5. Homework. 3% of the final grade.

Missed quizzes and/or lab classes will not be rescheduled.

Students attending to two of the 4 quizzes will be considered in the continuous assessment system. A student in continuos assessment is considered to be presented to the exam, independently of having taken all assessment events.

Students that want to improve their grademay attend the final exam. Their final grade will be the average between thefinal exam and the continuous assessment grade.

2.- **Final exam.** It consists of a 10 questions exam. The exam can be taken up to two timesper course. Time and place are published in the School web page. All material given in the lectures, lab classes and project presentations is subject toquestioning.

### Ethical code

Final exams and quizzes must be worked out on everyone's own. Any infraction will beconsidered a serious breach of ethics and reported to the academic authorities.

Lecturers may decide to fail a student if he has committed a serious ethical breach.
