New ICTs in E-commerce

Subject	New ICTs in E-commerce			
Code	V06M101V01205			
Study programme	University Master's Degree in International Trade			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	4.5	Mandatory	1st	2nd
Teaching language	Spanish			
Department				
Coordinator	García Rosello, Emilio			
Lecturers	García Rosello, Emilio González Dacosta, Jacinto			
E-mail	erosello@uvigo.es			
Web	http://fatic.uvigo.es/			
General description				

Competencies

Code	
C8	(*)Conocimiento de las nuevas tecnologías de información y comunicaciones aplicadas al comercio internacional
D14	(*)Conocimiento de las plataformas electrónicas, y los mercados a través de Internet.
D15	(*)Dominio de las operaciones electrónicas y de los aspectos colaterales de seguridad, riesgos y estructuras de funcionamiento

Learning outcomes

Expected results from this subject	Training and Learning Results
Applied knowledge of ICT and Internet in e-commerce. Know, be able to evaluate and plan the use of different resources and Internet-based tools such as the Web, Web 2.0 tools, electronic markets, and electronic payment means in e-commerce.	C8 D14 D15

Contents

Topic	
1. Overview of ICT and Internet in e-commerce.	ICT in e-commerce. The use of the Internet in commercial activity.
2. E-business models supported by ICT. ICT-based e-business models.	Types of business models based on the Internet and the intensive use of ICT.
3. The Web in the e-commerce: design, marketing and positioning in the Net.	Possibilities of the Web in the e-commerce. E-marketing. Technical aspects.
4. Internet based tools in e-marketing. Analysis tools.	Analysis of the digital reputation. Traffic analysis and monitoring.
5. Web 2.0 in e-commerce. Tools and services. Digital image and e-reputation.	The Web 2.0 paradigm. Influence on e-commerce. Tools and techniques. E-reputation.
6. ICT in B2B commerce. E-marketplaces and virtual business communities. E-logistics.	B2B Spaces. E-marketplaces. Influence of ICT in e-logistics.
7. e-banking. Fundamentals and services for e-commerce.	Introduction to e-banking. Services. Applications. Technical aspects.
8. Electronic transactions. Online payment . Security in transactions.	Types of electronic transactions. Types of online payment . Transaction security.
9. Data protection in e-commerce. Technical and legal aspects.	Introduction to data protection and its technical aspects.

Planning			
	Class hours	Hours outside the classroom	Total hours
Master Session	7	15.6	22.6
Integrated methodologies	28	58.8	86.8
Other	1	2.1	3.1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	Teacher presentation of contents on the subject matter of study, theoretical bases and / or guidelines of a work, exercise or project to be developed by the student.
Integrated methodologies	Students carry out a project or work in a given time, to solve a problem or to approach a task by means of the planning, design and realization of a series of evaluable activities or items. It will usually be done in teams (individual in case of non-attendees).

Personalized attention	
Methodologies	Description
Integrated methodologies	The student will have a continuous follow-up and a personalized attention, through the face-to-face classes, case studies, work, and regular control of the work done.
Tests	Description
Other	The student will have a continuous follow-up and a personalized attention, through the face-to-face classes, case studies, work, and regular control of the work done.

Assessment				
	Description	Qualification	Training and Learning Results	
Integrated methodologies	Students will carry out the realization of a project by carrying out a series of proposed evaluable works and activities. Each of these works and activities will be evaluated by the students, usually in work teams .	90	C8	D14 D15
Other	It will consist of a written test where problems will be solved, and / or answer development questions, and / or brief and / or test type. They will cover all the contents of matter.	10	C8	D14 D15

Other comments on the Evaluation

The above assessment is valid for students who follow continuous assessment. The conditions to be evaluated by continuous assessment are:

- For students in face-to-face mode: they must attend a minimum of 75% of the classroom hours.
- For online students: they must use the e-learning platform sufficiently assiduously (typically at least every 2 days) to be aware of the progress of the subject, as well as the appropriate and regular participation in online activities.

Those who do not meet these requirements will be considered not to follow the continuous assessment modality. Therefore they will be assessed by final exam (see below).

Alternatively, a student who, despite complying with these conditions, does not want to be evaluated by continuous assessment may explicitly renounce in writing to the professor, before the 3rd week of teaching. Or, if during the course, he / she will documentary and sufficiently proof of an incidental cause that objectively prevents him from following the continuous assessment. Otherwise, any student who fulfills the described conditions will be assessed by continuous assessment.

In general, for the face-to-face or virtual students, evaluated by continuous assessment, who have fulfilled all the indicated requirements to eventually pass the subject by this way, the final grade N of the student will be obtained as:

$$N = 0.9 * A + 0.1 * B$$

Being:

- A the result of the weighted average (depending on the estimated workload) of the grades obtained in each activity or evaluable item of the section of Integrated methodologies.

- And B the note obtained in the section of Other (written test).

Both A and B will score between 0 and 10.

It shall be understood that the student passed if the final mark N is greater than or equal to 5 over 10.

It is also an essential requirement to be able to pass by continuous assessment to perform and deliver, within the deadlines set for each modality, all activities or items evaluable in part A (Integrated methodologies) and obtain a score equal to or greater than 4 out of 10 in each and every one of them (generally each module of the subject will consist of one or more evaluable items). Otherwise the subject will be automatically considered as not passed. There may be compulsory delivery activities but that will only be assessed as pass/ not pass, in which case it will be required to be delivered and evaluated as pass, but will not be considered for the calculation of the above-mentioned average A.

For students who follow the continuous assessment but who have not met some of the essential requirements described above to pass the subject in its corresponding modality (delivery of all activities or items evaluable within the deadlines, obtaining the minimum grade in all activities or evaluable items, having a final grade ≥ 5), the final grade N can never exceed 4.9 out of 10. Therefore, it will be calculated as:

$$N = \text{minimum}(0,9 \cdot A + 0,1 \cdot B ; 4,9)$$

That is, as indicated in the formula, the final grade N will be the minimum of the values of $(0,9 \cdot A + 0,1 \cdot B)$ and 4.9.

Students who do not follow the continuous assessment modality, as well as those who submit to the July summons or other extraordinary convocations that may be established, must be submitted to the face-to-face examination to be held in the center, on the date established for the official convocations of the subject, to eventually pass the subject, and obtain a grade greater or equal to 5 out of 10.

IN CASE OF DOUBT, DISCREPANCY, ERROR OF TRANSLATION, INCOMPLETITUDE, INTERPRETATION, OR SIMILAR, THE CONTENT SPECIFIED IN THE SPANISH VERSION OF THIS GUIDE WILL PREVAIL.

Other comments

Given the eminently practical nature of the subject, based on the development of competences that may require a certain training in time, and the consequent difficulty of evaluating these competences in a single exam, students are strongly advised to follow up on the mode of continuous assessment.

Guidance for the study:

- Attendance to face-to-face classes is important for students who opt for this option, given the methodological approach and the performance of group activities.
 - Adequate planning for the respect of deadlines and schedules of activities is fundamental for the virtual students.
 - The regular connection (every two days at least) to the e-learning platform and participation in online group activities are considered fundamental for the monitoring of the subject in the virtual mode.
-
