General	The aim of this course is to prepare the students t	to handle the metho	de techniques ar	d tools that are needed
description	for the elaboration and management of technical			
	Furthermore, the student skills to communicate p Industrial Engineering field will be strenghtened. An essentially practical approach will be used, bas guidance of the subject's lecturer- that will require	sed in the solution of	f specific applicat	ion exercises -with
Competenc	ies			
Code	auladas in basis and tasknalasisal subjects that u	ill anabla students to		ada and theories and
	owledge in basic and technological subjects that w them the versatility to adapt to new situations.	ill enable students to	b learn new meth	ods and theories, and
	nowledge and skills to organize and manage project	ts Know the organiz	rational structure	and functions of a
project		the organiz		
	alysis and synthesis.			
	blems resolution.			
D3 CT3 Ora	al and written proficiency in the own language.			
	ormation Management.			
	plication of computer science in the field of study.			
	lity to organize and plan.			
	cision making.			
	bly knowledge.			
	elf learning and work.			
	anning changes to improve overall systems.			
D13 CT13 A	daptability to new situations.			
	bjectification, identification and organization.			
	itical thinking.			
	orking as a team.			
	orking in an international context.			

Learning outcomes Expected results from this subject		Training and Learning Results		
Utilization of methodologies, technics and tools for the organization and management of all technical documents other than engineering projects.	B3	C18	D1 D2 D7 D8 D9 D10 D14 D15 D16 D17	
Skills in the utilization of information systems and in the communications in the industrial scope.			D21 D5 D6 D9 D11 D17	
(*)2- Conocer y comprender los problemas filosóficos en su contexto y entender la vinculación con otros manifestaciones culturales del momento				
Skills to communicate properly the knowledge, procedures, results, abilities in the field of Engineering in Industry.			D3 D13 D17 D18 D20 D21	

Торіс	
1. Types of usual documents in the distinct fields	1.1. Technical documents: Characteristics and components.
of the professional engineering activities.	1.2. Types of technical documents according to their contents.
	1.3. Types of technical documents according to their recipients and
	objectives.
2. Methodology for writing and presenting	2.1. General aspects in elaborating and presenting technical
technical documentation: assessments,	documentation.
valuations, expert reports, studies, reports,	2.2. Elaboration of technical reports.
dossiers and other similar technical works.	2.3. Elaboration of technical studies.
	2.4. Elaboration of assessments, expert reports and valuations.
	2.5. Elaboration of dossiers and other technical works.
	2.6. Technical work in concurrent and/or collaborative engineering
	environments.
3. Techniques for research, analysis, evaluation	3.1. Typology of technological information.
and selection of technological information.	3.2. Sources of technological information.
	3.3. Information and communications systems.
	3.4. Techniques for information research.
	3.5. Methods for analyzing information.
	3.6. Evaluation and selection of information.
4. Laws and regulations about documentation.	4.1. Applicable laws to technical documentation according to its specific
	field.
	4.2. Other applicable regulations.
5. Processing of technical documentation.	5.1. Processing at Government Offices of technical documentation.
	5.2. Legitimization and responsabilities in the processing of documentation
	before Government's Offices.
	5.3. Processing of documentation: Concepts, procedures and specifics.
6. Presentation and verbal defence of technical	6.1. Regulations in the elaboration of technical presentations.
documents.	6.2. Preparation for the verbal defence of technical documents.
	6.3. Techniques and specific tools for the performance of public
	presentations.

Planning				
	Class hours	Hours outside the classroom	Total hours	
Master Session	29.5	44.25	73.75	

Laboratory practises	29.5	44.25	73.75	
Practical tests, real task execution and / or simulated.	1.3	0	1.3	
Short answer tests	1.2	0	1.2	
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
	Description
Master Session	Presentation by the lecturer of the contents of the topic to be studied, the theoretical bases and/or guidelines of a specific work, exercise or project to be developed by the student.
Laboratory practises	Activities that require applying theoretical knowledge to specific situations in order to acquire basic and procedural skills related to the topic that is being studied. These activities will be developed in special spaces with specific equipment (laboratories, computer rooms, etc.).

Personalized attention				
Methodologies	Description			
Laboratory practises	Activities oriented to the application of knowledge to specific situations, and to acquire basic and procedimental skills related to the field of study. Rooms equiped with specific materials and resources will be used for these classes. An appropriate follow-up will be performed on student's work to verify that the best practices shown in theory classes are applied, and that the procedimental recommendations provided by the lecturer are followed.			

Assessment					
	Description	Qualification		raining rning	g and Results
	Interdisciplinary exercises and problems -as close to real cases as possible- will be solved in groups of students, with lecturer orientation and enforcing active participation by the students.	60	B3	C18	D1 D2 D3 D6 D7 D8 D9 D10 D11 D13 D14 D15 D16 D17 D18 D21
Practical tests, real task execution and / or simulated.	Making of practical tests and exercises related to the subject's contents in the scope of the subject's final assessment.	s, 20	Β3	C18	D1 D2 D3 D7 D8 D9 D11 D13 D14 D15 D16
Short answer tests	Groups of short answer questions related to the subject's contents, to check that the students have understood and assimilated the theoretical and practical contents.	20	B3	C18	D1 D2 D3 D7 D8 D9 D11 D13 D14 D15 D16

Other comments on the Evaluation

Assessment of student's work - individually and/or in groups, either face-to-face or non-presential - will be carried out by the lecturer by weighting appropriatelly the different marks obtained in the activities that were proposed along this course.

Students may opt to follow this course either in the 'Continuous Evaluation' or in the 'Non-Continuous Evaluation' modalities. In both cases the grading of the course will be made according to a numerical system, using values from 0,0 to 10,0 pointsaccording to the current laws that are applicable (R.D. 1125/2003 of 5th September, BOE Nr. 224 of18th September). A minimum overall mark of 5,0 is required to pass this course.

For theFirst Announcement or Edition.

a) 'Continuous Evaluation' modality:

The final mark for the course will be calculated by combining the individual marks awarded in the assessment of the works proposed and elaborated in the practical classes (60% weight) along the term, with the mark awarded for the final test performed in the date stated by the School's Ruling (40% weight).

These marks will asses the behaviour and the implication of the student both in class and in the realisation of the different programmed activities, plus the fulfillment of the deadlines for submitting the works that were proposed, and/or the presentation and defence of those works, etc.

Students not reaching the minimum value of 3,5 points out of 10 that are required for every section, they will either need to perform also the assessment in the SecondAnnouncement date, or to elaborate additional works or practical exercises to achieve the learning goals that were established for the concerned sections.

b) 'Non-ContinuousEvaluation' modality:

There is a two weeks time term after the starting date of the course for the concerned students to justify with documents that it is not possible for them to follow the regular process of continuous evaluation.

In order to pass this course, students renouncing to continuous evaluation will be obligued to perform a final test covering thewhole contents of the course, both theoretical and practical, including short questions, reasoning questions, problem solving and development of practical cases. The mark awarded to the student assessment will be the final mark for the course.

A minimum mark of 5,0 points out of 10,0 possible will be required to pass the course.

For theSecond Announcement or Edition.

Students who did not pass the course in the First Announcement, but that could have passed some specific parts of the theory or practical blocks, will be allowed to be assessed only regarding the failed parts, keeping the marks formerly awarded for the parts already passed, and applying the same assessment criteria to them.

Students wishing to improve their qualification, or students that failed the course on the First Announcement, will need to assist to the Second Announcement, where they will be assessed about the whole contents of the course, both theoretical and practical, including short questions, reasoning questions, problem solving and development of practical cases. Students are required to reach a minimum mark of 5,0 points out of 10,0possible to pass the course.

Ethical commitment:

It is expected an adequate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for theassessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will beconsidered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Other comments

Previously to the realisation of the final assessments, students should check in the FAITIC platform to know whether it is necessary for them to carry any particular documentation, materials, etc. into the exam room to perform the tests.

It is necessary that the student registered in this course, either has passed all courses of the former years, or is registered in the courses he's not passed yet.
