

IDENTIFYING DATA

Fundamentals of Acoustics Engineering

Subject	Fundamentals of Acoustics Engineering		
Code	V05G300V01531		
Study programme	Degree in Telecommunications Technologies Engineering		
Descriptors	ECTS Credits	Choose	Year
	6	Optional	3rd
Teaching language	Spanish		
Department	Signal Theory and Communications		
Coordinator	Torío Gómez, Pablo		
Lecturers	Márquez Flórez, Óscar William Torío Gómez, Pablo		
E-mail	ptorio@uvigo.es		
Web	http://fatic.uvigo.es		
General description	Concepts covered by the subject: vibratory systems related to the acoustic wave equation, radiation and propagation, mechanisms of acoustic-mechanical-electrical transduction, behaviour and design of speakers and microphones.		

Competencies

Code	
B3	CG3: The knowledge of basic subjects and technologies that enables the student to learn new methods and technologies, as well as to give him great versatility to confront and adapt to new situations
B5	CG5: The knowledge to perform measurements, calculations, assessments, appraisals, technical evaluations, studies, reports, task scheduling and similar work to each specific telecommunication area.
B6	CG6: The aptitude to manage mandatory specifications, procedures and laws.
B9	CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics.
B11	CG11 To approach a new problem considering first the essential and then the secondary aspects
C34	CE34/SI1 The ability to construct, exploit and manage telecommunication services and applications, such as receiving, digital and analogical treatment, codification, transporting and representation, processing, storage, reproduction, management and presentation of audiovisual and multimedia information services.
C37	CE37/SI4 The ability to carry out acoustic engineering projects related to: acoustical isolation and conditioning of rooms, loudspeaker installations, specification, analysis and selection of electro acoustical transducers, measurement, analysis and control of radio vibration systems, environmental acoustics, submarine and acoustical systems.
D3	CT3 Awareness of the need for long-life training and continuous quality improvement, showing a flexible, open and ethical attitude toward different opinions and situations, particularly on non-discrimination based on sex, race or religion, as well as respect for fundamental rights, accessibility, etc.
D4	CT4 Encourage cooperative work, and skills like communication, organization, planning and acceptance of responsibility in a multilingual and multidisciplinary work environment, which promotes education for equality, peace and respect for fundamental rights.

Learning outcomes

Expected results from this subject	Training and Learning Results
------------------------------------	-------------------------------

* Understand the basic mechanisms of vibration of distinct elements and interpret his relation with the production of sound.	B3 B11	C34 C37
* Know the bases of the linear acoustics and understand the concepts of pressure, speed of particle, intensity, power and impedance.		
* Understand the phenomena of propagation of the sound and to analyse the influence of the medium.		
* Understand the phenomenon of the radiation of acoustic waves.		
* Understand the basic mechanisms of the *transducción mechanical-acoustic.		
* Analyse electro-mechanical-acoustic systems by the use of analogies which are based on circuit theory.	B3 B5 B11	C34 C37
* Design acoustic systems by using speakers, acoustic boxes and horns.	B11	
* Analyse different types of microphones from the point of view of their technical specifications and their possible applications.		
* Interpret technical specifications within working teams.	B6	C34
* Apply norms of measuring.	B9	C37
* Elaborate trial procedures.	B11	
* Develop trial procedures.		
* Process data obtained from trials		
* Program processing algorithms.		
* Value technical results.		
* Write trial reports.		
* Cooperate and collaborate in working groups to carry out technical projects.		D3
* Adapt to new surroundings.		D4
* Accept the role allocation in a group.		
* Contribute to the resolution of conflicts.		

Contents

Topic	
1. Sound power measurement tests.	Acoustic variables. Sound field. Propagation. Uses of intensity and power. Sound intensity probes. Power measurement standards using acoustic pressure or intensity.
2. Models of radiation sources.	Directivity. Acoustic impedance. Monopole. Dipole. Monopole on infinite baffle. Baffled circular piston. Directivity measurement standards.
3. Vibrating systems.	Damped and forced oscillatory motion. Vibration of strings, bars, membranes and plates. The sound in tubes. Sound sources. Acoustic filters.
4. Specifications and measurement of electroacoustic systems.	Introduction to loudspeakers: baffles and crossovers. Acoustic measurement tests: measurement of speakers. Measurement of noise and nonlinear distortion.
5. Analogies and transduction.	Electro-mechano-acoustic systems. Equivalent circuits. Transduction
6. Speakers, horns and cabinets.	Equivalent model of an infinite baffle loudspeaker. Equivalent model of a cabinet with speaker. Horns.
7. Cabinet design.	Techniques and design criteria of acoustic boxes
8. Microphones.	A microphone equivalent model. Tank circuits.
9. Submarine acoustics and ultrasounds	Submarine acoustics. Ultrasounds

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	19	38	57
Autonomous problem solving	3	6	9
Computer practices	11	19	30
Laboratory practices	6	6	12
Problem solving	0	39	39
Short answer tests	1.75	0	1.75
Short answer tests	0.25	0	0.25
Short answer tests	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Oral speech, promoting the critical discussion of the concepts. Theoretical bases of algorithms and procedures used to solve problems are presented. CG3, CG5, CG11, CE34, CE37.

Autonomous problem solving	Individual resolution of exercises as a practical application of the theoretical bases and procedures described in the master sessions. Given a specific situation, the student has to obtain the suitable solution, in a reasoned way, by properly choosing the appropriate formulas and coming to a valid solution. CG3, CG5, CG11, CE34, CE37.
Computer practices	Handle and adjustment of tools of analysis and algorithms, in group, identifying which is appropriate for a given situation. CG3, CG5, CG6, CG9, CG11, CE34, CE37, CT3, CT4.
Laboratory practices	Cooperative and collaborative work with measuring equipment in reduced groups, and registering of acoustic magnitudes, in laboratory environments. CG3, CG5, CG6, CG9, CG11, CE34, CE37, CT3, CT4.
Problem solving	Given a certain situation, students individually should obtain the reasoned suitable solution, properly choosing the applicable formulas and arriving to a valid solution. CG3, CG5, CG6, CG11, CE34, CE37.

Personalized attention

Methodologies	Description
Lecturing	Doubts may be solved in the tutorial classes. These will take place in the following way: - Individually or in small groups (typically with a maximum of 2-3 people). - Unless the contrary is specified, previous appointment with the professor will be required. The appointment will be requested and acknowledged by email. Place and time will preferably be as officially scheduled.
Computer practices	Doubts may be solved in the tutorial classes. These will take place in the following way: - Individually or in small groups (typically with a maximum of 2-3 people). - Unless the contrary is specified, previous appointment with the professor will be required. The appointment will be requested and acknowledged by email. Place and time will preferably be as officially scheduled.

Assessment

Description	Qualification	Training and Learning Results		
Computer practices Assessment of the reports describing the results obtained in the computer classroom.	10	B3 B5 B6 B9 B11	C34 C37	D3 D4
Laboratory practices Exam on the preliminary preparation of the laboratory practices	8'75	B3 B5 B6 B9 B11	C34 C37	D3 D4
Short answer tests Written exam, with brief questions and problems.	50	B3 B5 B11	C34 C37	
Short answer tests Exam on the work done in the computer classroom.	5	B3 B5 B6 B11	C34 C37	
Short answer tests Exam on the interpretation exercises of the laboratory practices.	26,25	B3 B5 B6 B11	C34 C37	

Other comments on the Evaluation

Following the guidelines of the studies, two evaluation systems will be offered to the students inscribed on this subject:

Continuous evaluation (the preferred method, academic activities are linked to this system) and evaluation at the end of the semester (not recommended).

*** Students who choose continuous evaluation:**

Students will follow the continuous evaluation system if they sign a document that will be delivered and collected when the collaborative work begins.

Weighing:

* Short answer tests of magister sessions. At the official date. Individual assesment.

* Practices in computer rooms. The evaluation will be done twofold: Reports describing the results obtained in the computer classroom, assessed in flexible groups of two, and short answer tests, with individual assesment.

* Laboratory practices. The evaluation will be done twofold: Practice preparation, with exam at the same session, assessed in small groups, and practice interpretation, at the last session, with individual assesment. Attendance to these laboratory practices is considered as compulsory.

When group assessment, all group components will obtain the same mark, provided that their contribution in the compulsory attendance sessions is reasonably similar, according to professor's judgement.

To ensure that all competencies are acquired, it will be necessary to jointly fulfill these two conditions to pass:

1) To obtain a grade equal to or greater than 4 (on a scale of 0 to 10), in the set of activities of each type.

2) To obtain an overall mark, calculated as the sum of the scores of activities weighted correspondingly, equal to or greater than 5 (on a scale of 0 to 10)

In the event that only condition 2) is fulfilled, and not condition 1), the global mark in the subject will be 4.

Missed quizzes and/or lab classes will not be rescheduled.

*** Students who choose for evaluation at the end of the semester:**

The possibility of a final examination will be provided to students who do not opt for the continuous evaluation. This final exam will cover all the activities of the subject.

Weighing:

* Magister sessions. Individual assesment. (weight: 50%)

* Practises in computer rooms. Individual assesment. (weight: 15%)

* Laboratory practises. Individual assesment. (weight: 35%)

To ensure that all competencies are acquired, it will be necessary to jointly fulfill these two conditions:

1) To obtain a grade equal to or greater than 4 (on a scale of 0 to 10), in each of the sections in which the test is divided.

2) To obtain an overall grade in the examination equal to or greater than 5 (on a scale of 0 to 10).

SECOND CHANCE

Two different situations:

=> Students that are evaluated using continuous evaluation:

Two options to choose (just before the exam begins):

* To perform again the written part of the exams on the official date assigned by the Center and be evaluate as stated in the above section Students who choose continuous evaluation.

* To be evaluated with the same final exam as stated in the above section Students who choose for evaluation at the end of the semester.

=> Students who choose for evaluation at the end of the semester:

A final examination will be provided to students who do not opt for the continuous evaluation. This final exam will be

assessed as stated in the above section Students who choose for evaluation at the end of the semester.

EXTRAORDINARY CALL

Extraordinary calls will be assessed as stated in the above section Students who choose for evaluation at the end of the semester.

In the event of copycatting at any proof or work, the final assessment will be FAIL (0) and the event will be communicated to the Centre headmaster in order to conduct appropriate measures.
