*The information in the planning table is	for guidance only and does no	ot take into account the het	erogeneity of the students.

Methodologies	
	Description
Introductory activities	With *antelación to the start of the face-to-face sessions will be to disposal of the students a listing detailed of knowledges that owe to purchase along his previous training and that will be him necessary to face the matter successfully.
Case studies	With *antelación to the realisation of the theoretical sessions, the students will have of a series of matters that have to prepare, as on them *versarán said sessions.
Lecturing	They will develop in the schedules fixed by the direction of the centre. They will consist in an exhibition by part of the professor of notable appearances of the matter that will be related with the matters that previously had to work the student. In this way favourable the active participation of the same, that will have occasion to expose doubts and questions during the session.
Problem solving	They will develop in the schedules fixed by the direction of the centre. When it result timely or notable will proceed to the resolution of examples and/or problems that illustrate properly the problematic to treat.
Autonomous problem solving	After each theoretical session of classroom the student would have to realise, of systematic form a study of consolidation and review where would have to remain resolved all his doubts with respect to the matter. The doubts or unsolved appearances will have to expose them to the professor to the greater shortness, so that this use these doubts or questions like element of *realimentación of the process of education-learning.
Previous studies	It is absolutely indispensable that, for one correct *aprovechamiento, the student realise a previous preparation of the practical sessions of laboratory, for this will supply him indications and specific material for each session with *antelación sufficient. The student will have to work previously on the material supplied and also has to have prepared the necessary theoretical appearances to tackle the session. This previous preparation will be an element that will have very in account to the hour to evaluate each practical session.
Laboratory practical	During the sessions of practices the students will realise activities of the following type: - Setting of circuits. - I handle of electronic instrumentation - Measured on circuits - relative Calculations to the setting and/or measures of *comprobación - Compilation and representation of data At the end of each session of practical each group will deliver the leaves of corresponding results.
Personalized assista	nce

Methodologies

Description

Assessment		0 110 11		
	Description	Qualification	Training Learning	-
Laboratory practical	The practices of laboratory will evaluate of continuous way (session to session). The criteria of evaluation are: - A minimum assistance of 80%. - *Puntualidad. - Previous preparation of the practices. - *Aprovechamiento Of the session. - The practical sessions will realise in groups of two students. The billed of the practices will be the disposal of the students with *antelación. - The students answered in a group of leaves the results, that will deliver to the ending of the practice. These leaves will serve to justify the assistance and value the *aprovechamiento.	20	C22	D6 D17
Essay questions exam	It will consist in a proof written of individual and face-to-face character that will realise when finalising the *cuatrimestre, in the schedules established by the direction of the centre. The proof will be able to consist in a combination of the following types of exercises: - you Question type test. - Questions of short answer. - Problems of analysis. - Resolution of practical cases.	80	B4 C22 C24	D2 D6 D9

Other comments on the Evaluation

To surpass the *asignatura, the student has to obtain 5 points on 10.

Recommendations:

The students will be able to consult any relative doubt to the activities assigned to the group of work to the that belong or the matter seen in the face-to-face hours in the hours of *tutorías or through the means related in the section of Attention to the student.

The students have to fulfil *inexcusablemente the terms established for the different activities.

In the different proofs advises to the students that justify all the results that reach. To the hour to mark them will not give any result by *sobreentendido and will take into account the method employed to arrive to the solution proposed. It recommends, in the presentation of the diverse exercises, not presenting faults of spelling and characters or unreadable

symbols, because they will affect the final punctuation.

During the realisation of the final examination the mobile telephones will have to be turned off, and, only in the case that authorise previously, will be able to use aim, computers or another material of support.

Guidelines for the improvement and the recovery:

In case that a student do not approve the matter in the first announcement, has of a second announcement in the present academic course. The corresponding final qualification for this second announcement will obtain like result to add the following notes:

1.- The note obtained in the evaluation of the practices of laboratory in the first announcement, with a weight of 20% of the final qualification.

2.- The note obtained in the evaluation the evaluation of the thematic blocks with the same *contextualización that in the first announcement. The weight of this note is of 20% of the final qualification.

3.- The note obtained in the evaluation of the final examination realised in this announcement with the same

*contextualización that in the first announcement. The weight of this note is of 60% of the final qualification.

To approve the matter in this second announcement is necessary to obtain an equal final punctuation or upper to 5 points.

Once finished the present academic course the note obtained in the evaluation of the final examination loses his validity. The notes obtained in the evaluations of practices and of the thematic blocks will keep during the two academic courses following to the present course, except that the student wish to do them again.

Evaluation of students with renunciation to the evaluation continued:

The students that was them conceded, of official form by the centre, the renunciation to the evaluation continued, will have to realise a proof written similar to the proof *individualizada of long answer and a practical proof of laboratory. Both proofs will have a maximum punctuation of 10 points. The final note will be the average of the notes of the two proofs. To surpass the *asignatura will have to obtain an equal or upper note to 5 points. The proof written will realise when finalising the *cuatrimestre, in the schedules established by the direction of the centre. The practical proof in a near date to the previous and that will propose in function of the availability of the laboratories. []&*nbsp;&*nbsp;&*nbsp; ethical Commitment: *Espérase that or present

student a *comportamento ethical *axeitado. No case to detect a *comportamento *non ethical (copy, *plaxio, utilisation of electronic devices *non authorised,

and *outros) *considerarase that or student *non gather you necessary requirements to

surpass to matter. *Neste Case to global qualification no present academic course

will be of suspense (0.0).
