Bioquemist	ry and cellular biology				
Subject	Bioquemistry and cellular biology				
Code	V12G420V01301	·			
Study programme	(*)Grao en Enxeñaría Biomédica				
Descriptors	ECTS Credits	·	Choose	Year	Quadmester
	6	·	Mandatory	2nd	1st
Teaching language	Spanish Galician				
Department					
Coordinator	Pombal Diego, Manuel Ángel Gil Martín, Emilio				
Lecturers	Bea Mascato, Brais Gil Martín, Emilio Megías Pacheco, Manuel Pombal Diego, Manuel Ángel				
E-mail	pombal@uvigo.es egil@uvigo.es				
Web					
General description	Conceptual subject on the principles of cellular and molecular organization of living organisms. The understanding of the dynamics of biological processes, based on the knowledge of the chemical composition and cellular structure of biological systems is the strategic objective.				

Competencies

Code

Learning outcomes Expected results from this subject

Training and Learning Results

Contents

Торіс		
1. Chemical composition of biological systems.	Macrobiogenic, microbiogenic and trace elments.	
	The molecular logic of life.	
	Structure of biological macromolecules.	
2. Structural biochemistry of proteins.	Aminoacids: structure and properties.	
	Peptide bond features.	
	Three-dimensional structure of proteins: protein folding.	
	Protein denaturation.	
3. Principles of biocatalysis and regulation of	Enzymes as biological catalysts.	
enzyme activity.	Enzyme structure and functional principles.	
	How enzymes work.	
	Substrate specificity: the active site.	
	Classification of enzymes and nomenclature.	
	Enzyme kinetics: the Michaelis-Menten equation and calculation of kinetic	
	parameters.	
4. Structural biochemistry of carbohydrates, lipid	dsStructural units: structure and chemical properties.	
and nucleic acids. Biological relevance.	Macromolecular structure of carbohydrates, lipids and nucleic acids.	
	Biological relevance.	
5. Cell membrane and extracellular matrix.	Structure, composition and functions.	
	Membrane transport.	
	Cell junctions.	

7. Cytoskeleton and cell movement. Actin filaments, microtubules and intermediate filaments. 8. Nucleus, cell cycle, apoptosis. Nuclear envelope. Chromatin and chromosomes: structure and dynamics. Nucleolus. Cell cycle regulation. Cell death: apoptosis and necrosis. Practice 1. Assay of enzyme activity. Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity. Practice 2. Quantification of total protein content in biological samples. Seroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract. Practice 3. Kinetic characterization of enzyme activity. Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 7. Cell organelles II. Identification of cell organelles at light microscopy images. Practice 7. Cell organelles II. Observation of cell organelles in electron microscopy images.	6. Organelles and intracellular traffic.	Endoplasmic reticulum and Golgi apparatus. Vesicular trafficking. Cell digestion: peroxisomes and lysosomes. Mitochondria: structure and function.
7. Cytoskeleton and cell movement. Actin filaments, microtubules and intermediate filaments. 8. Nucleus, cell cycle, apoptosis. Nuclear envelope. Chromatin and chromosomes: structure and dynamics. Nucleolus. 8. Nucleus, cell cycle, apoptosis. Nuclear envelope. Chromatin and chromosomes: structure and dynamics. Nucleolus. 9. Practice 1. Assay of enzyme activity. Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity. 9. Practice 2. Quantification of total protein content in biological samples. Seroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract. 9. Practice 3. Kinetic characterization of enzyme activity. Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax. 9. Practice 4. Thermal stability and optimum pH. Determining the optimum pH of beta-D-galactosidase. Determining the optimum pH of beta-D-galactosidase. 9. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. 9. Practice 7. Cell organelles I. Observation of cell organelles at light microscopy images. 9. Practice 8. Cell cycle Observation of cell organelles in electron microscopy images.	7.0.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.	
 8. Nucleus, cell cycle, apoptosis. Nuclear envelope. Chromatin and chromosomes: structure and dynamics. Nucleolus. Cell cycle regulation. Cell death: apoptosis and necrosis. Practice 1. Assay of enzyme activity. Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity. Practice 2. Quantification of total protein content in biological samples. Practice 3. Kinetic characterization of enzyme activity. Practice 4. Thermal stability and optimum pH. Determining the optimum pH of beta-D-galactosidase. Determining the optimum pH of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Observation of cell organelles 1. Observation of cell organelles in electron microscopy images. Observation and quantification of microscopy images. 	7. Cytoskeleton and cell movement.	Actin filaments, microtubules and intermediate filaments.
Chromatin and chromosomes: structure and dynamics. Nucleolus. Cell cycle regulation. Cell death: apoptosis and necrosis. Practice 1. Assay of enzyme activity. Practice 2. Quantification of total protein content in biological samples. Practice 3. Kinetic characterization of enzyme activity. Practice 4. Thermal stability and optimum pH. Practice 5. Cell types and extracellular matrix. Practice 6. Cell organelles I. Practice 7. Cell organelles II. Practice 7. Cell organelles II. Practice 8. Cell cycle regulation. Cell death: apoptosis and necrosis. Cell death: apoptosis and necrosis. Determining the optimum pH of beta-D-galactosidase. Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Practice 7. Cell organelles II. Practice 8. Cell organelles II. Practice 7. Cell organelles II. Practice 7. Cell organelles II. Practice 7. Cell organelles II. Practice 7. Cell organelles II. Practice 8. Cell organelles II. Practice 9. Cell organelles II. Practice	8. Nucleus, cell cycle, apoptosis.	Nuclear envelope.
Nucleolus. Cell cycle regulation. Cell death: apoptosis and necrosis.Practice 1. Assay of enzyme activity.Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity.Practice 2. Quantification of total protein contentSeroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract.Practice 3. Kinetic characterization of enzyme activity.Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax.Practice 4. Thermal stability and optimum pH.Determining the optimum pH of beta-D-galactosidase. Determining the optimum pH of beta-D-galactosidase.Practice 5. Cell types and extracellular matrix.Observation of cell types and extracellular matrices at light microscopy.Practice 7. Cell organelles I.Identification of cell organelles in electron microscopy images.Practice 8. Coll cycleObservation and quantification of mitotic phases in animal tiscuor		Chromatin and chromosomes: structure and dynamics.
Cell cycle regulation. Cell death: apoptosis and necrosis.Practice 1. Assay of enzyme activity.Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity.Practice 2. Quantification of total protein content in biological samples.Seroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract.Practice 3. Kinetic characterization of enzyme activity.Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax.Practice 4. Thermal stability and optimum pH.Determining the optimum pH of beta-D-galactosidase. Determining the optimum pH of beta-D-galactosidase.Practice 5. Cell types and extracellular matrix.Observation of cell types and extracellular matrices at light microscopy.Practice 7. Cell organelles I.Identification of cell organelles in electron microscopy images.Practice 8. Cell cycleObservation and quantification of mitoric phases in animal tiscuos		Nucleolus.
Cell death: apoptosis and necrosis.Practice 1. Assay of enzyme activity.Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity.Practice 2. Quantification of total protein content in biological samples.Seroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract.Practice 3. Kinetic characterization of enzyme activity.Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax.Practice 4. Thermal stability and optimum pH.Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase.Practice 5. Cell types and extracellular matrix.Observation of cell types and extracellular matrices at light microscopy.Practice 7. Cell organelles I.Identification of cell organelles in electron microscopy images.Practice 8. Cell cycleObservation and quantification of mitotic phases in animal tiscues		Cell cycle regulation.
Practice 1. Assay of enzyme activity.Obtention of an active fraction of beta-D-galactosidase. Measurement of beta-D-galactosidase activity.Practice 2. Quantification of total protein content in biological samples.Seroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract.Practice 3. Kinetic characterization of enzyme activity.Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax.Practice 4. Thermal stability and optimum pH.Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase.Practice 5. Cell types and extracellular matrix.Observation of cell types and extracellular matrices at light microscopy.Practice 7. Cell organelles I.Identification of cell organelles in electron microscopy images.Practice 8. Cell cycleObservation and quantification of mitotic phases in animal tiscues		Cell death: apoptosis and necrosis.
Measurement of beta-D-galactosidase activity.Practice 2. Quantification of total protein contentSeroalbumin standard calibration curve by the Lowry method.in biological samples.Determination of protein concentration in beta-D-galactosidase extract.Practice 3. Kinetic characterization of enzyme activity.Substrate saturation curve for beta-D-galactosidase.Practice 4. Thermal stability and optimum pH.Determining Km and Vmax.Practice 5. Cell types and extracellular matrix.Observation of cell types and extracellular matrices at light microscopy.Practice 7. Cell organelles I.Identification of cell organelles in electron microscopy images.Practice 8. Cell cycleObservation and quantification of mitotic phases in animal tiscues	Practice 1. Assay of enzyme activity.	Obtention of an active fraction of beta-D-galactosidase.
Practice 2. Quantification of total protein content in biological samples. Seroalbumin standard calibration curve by the Lowry method. Determination of protein concentration in beta-D-galactosidase extract. Practice 3. Kinetic characterization of enzyme activity. Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax. Practice 4. Thermal stability and optimum pH. Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 7. Cell organelles I. Observation of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues		Measurement of beta-D-galactosidase activity.
in biological samples.Determination of protein concentration in beta-D-galactosidase extract.Practice 3. Kinetic characterization of enzyme activity.Substrate saturation curve for beta-D-galactosidase. Determining Km and Vmax.Practice 4. Thermal stability and optimum pH.Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase.Practice 5. Cell types and extracellular matrix.Observation of cell types and extracellular matrices at light microscopy.Practice 6. Cell organelles I.Observation of cell organelles at light microscopy images.Practice 7. Cell organelles II.Identification of cell organelles in electron microscopy images.Practice 8. Cell cycleObservation and quantification of mitotic phases in animal tiscues	Practice 2. Quantification of total protein content	Seroalbumin standard calibration curve by the Lowry method.
Practice 3. Kinetic characterization of enzyme activity. Substrate saturation curve for beta-D-galactosidase. Practice 4. Thermal stability and optimum pH. Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 7. Cell organelles I. Observation of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues.	in biological samples.	Determination of protein concentration in beta-D-galactosidase extract.
activity. Determining Km and Vmax. Practice 4. Thermal stability and optimum pH. Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 6. Cell organelles I. Observation of cell organelles at light microscopy. Practice 7. Cell organelles II. Identification of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues	Practice 3. Kinetic characterization of enzyme	Substrate saturation curve for beta-D-galactosidase.
Practice 4. Thermal stability and optimum pH. Determining the optimum pH of beta-D-galactosidase activity. Thermal inactivation of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 6. Cell organelles I. Observation of cell organelles at light microscopy. Practice 7. Cell organelles II. Identification of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues.	activity.	Determining Km and Vmax.
Thermal inactivation of beta-D-galactosidase. Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 6. Cell organelles I. Observation of cell organelles at light microscopy. Practice 7. Cell organelles II. Identification of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues.	Practice 4. Thermal stability and optimum pH.	Determining the optimum pH of beta-D-galactosidase activity.
Practice 5. Cell types and extracellular matrix. Observation of cell types and extracellular matrices at light microscopy. Practice 6. Cell organelles I. Observation of cell organelles at light microscopy. Practice 7. Cell organelles II. Identification of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues		Thermal inactivation of beta-D-galactosidase.
Practice 6. Cell organelles I. Observation of cell organelles at light microscopy. Practice 7. Cell organelles II. Identification of cell organelles in electron microscopy images. Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tiscues.	Practice 5. Cell types and extracellular matrix.	Observation of cell types and extracellular matrices at light microscopy.
Practice 7. Cell organelles II. Identification of cell organelles in electron microscopy images.	Practice 6. Cell organelles I.	Observation of cell organelles at light microscopy.
Practice 8. Cell cycle Observation and quantification of mitotic phases in animal tissues	Practice 7. Cell organelles II.	Identification of cell organelles in electron microscopy images.
	Practice 8. Cell cycle.	Observation and quantification of mitotic phases in animal tissues.

Planning			
	Class hours	Hours outside the classroom	Total hours
Laboratory practical	16	16	32
Lecturing	34	68	102
Objective questions exam	2	14	16
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Laboratory practical	They include activities carried out in the laboratory involving the application to experimental contexts of theorical knowledge and technical guidelines discussed in the lectures. Practices, in addition to experimental work, include individual or group tasks aimed at promoting the acquisition of general, specific and transversal skills of the subject.
Lecturing	Teacher dissertations on concepts and practical guidelines required for the acquisition of general, specific and transversal skills of the subject. Lectures will be dynamical and open to debate with the students.

Personalized assistance			
Methodologies	Description		
Lecturing	Lectures are participatory and include questions and issues to be solved. They also allow monitoring the learning progress. Questions and doubts resolution may also be solved during individual tutorials.		
Laboratory practical	Teachers will provide individual attention to each student during laboratory practices, as much support as they need for the correct understanding of experimental objectives, required methodology or technical procedures to be performed. Each student will be supervised by the teacher and will receive specific instructions according to the results achieved.		
Tests	Description		
Objective questions exam Teachers will solve doubts during examination.			
Laboratory practical Tests Objective questions exam	Teachers will provide individual attention to each student during laboratory practices, as much support as they need for the correct understanding of experimental objectives, required methodology or technical procedures to be performed. Each student will be supervised by the teacher and will receive specific instructions according to the results achieved. Description Teachers will solve doubts during examination.		

Assessment			
	Description	Qualification Tra	aining and Learning Results
Laboratory practical	Laboratory practices exam.	20	
Objective questions examFinal theoretical exam of the subject with test and short answer		80	
	questions.		

Other comments on the Evaluation

The attendance to lectures and laboratory practices is mandatory, except for documented reasons.

The subject will be passed by obtaining 5.0 or more out 10 as final mark, reached as follows:

- attendance to laboratory practices and completion of the practical exam (20%)

- completion of the final exam consisting oftest and short answer questions (80%) on the dates scheduled by the School: January (first edition) and June (second edition).

A numerical 0-10 rating system will be used according to the legislation contained in RD of September 1125/2003, BOE of September 18.

To pass the subject, it must be overcome the 40% of both, theory and practical exams. Otherwise, the final mark will be the result of multiplying theory + practices by 0.5.

In the case that final mark of the subject does not reach 5.0, but theory or practical part are passed, that score will be maintained for the second exam opportunity (July).

Repeating students from previous academic courses must perform all lecture and practical activities, of which they will be evaluated.

*Ethical commitment: students are expected to exhibit adequate ethics. In the case of detecting unethical behavior (copying, plagiarism, use of unauthorized electronic devices, etc), the student will not pass the subject. In this case, the overall score in the current academic year will be 0.0.
