General	Introduction to linear elastic m	naterials, and analysis	of internal loading	s, stress and st	rain relationships. Study
description	of the fundamentals of mechai	nics of materials and	particularization fo	r shafts and bea	am structures.

Competencies

Code

- B3 CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
- B4 CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
- C14 CE14 Knowledge and use of the principles of strength of materials.
- D1 CT1 Analysis and synthesis.
- D2 CT2 Problems resolution.
- D9 CT9 Apply knowledge.
- D10 CT10 Self learning and work.
- D16 CT16 Critical thinking.
- D17 CT17 Working as a team.

Expected results from this subject		Training and Learning Results			
To know the differences between rigid solid and elastic solid.	B3	C14	D1		
To know the stress and deformation states in a deformable solid and the relationship between	В4		D2		
them.			D9		
Apply the acquired knowledge to the determination of the maximum values of stress at a point of			D10		
deformable solid.			D16		
To know the basic principles governing the Mechanics of Materials.			D17		
To know the relationships between the different stress resultants and the stresses.					
To apply the knowledge acquired to the determination of stress resultant diagrams.					
To apply the acquired knowledge about stresses applied to bar elements.					
To know the basics about deformations of bar elements.					
To apply the knowledge acquired to the dimensioning of bar elements.					

Contents	
Topic	
1. Introduction	1.1 Introduction
	1.2 Review of statics fundamentals and applied concepts for further
	progress in solid mechanics and stress analysis
2. Basic principles of elasticity and mechanics of	2.0 Stress and strain. Linear elastic materials
materials.	2.1. Normal stress in an axially loaded prismatic bar.
	2.2. Equilibrium of a deformable body.
	2.3. Stress-Strain diagram of ductile materials. Hooke∏s Law.
	2.4. Stress resultants. Diagrams.
3. Axial loads	3.1. Normal forces.
	3.2. Elastic deformation of an axially loaded member.
	3.3. Statically governed problems.
	3.4. Statically indeterminate problems.
	3.5. Thermal stress and assembly misfits.
4. Bending and shear	4.1 Beams: definition and types. Loads on beams.
-	4.2 Internal shear forces and bending moments.
	4.3 External load, shear force and bending moment relationships.
	4.4 Shear and moment diagrams
	4.5 Pure bending and non-uniform bending. Hypothesis and limitations.
	4.6. Normal stresses in unsymmetric bending.
	4.7 Symmetric bending. The flexure formula (Navier s Law).
	4.8 Section modulus of a beam. Ideal beam cross-section.
	4.9 Deflection of beams and shafts. Slope and deflection.
	4.10 Hyperstatic bending.
	4.11 The shear formula.
5. Introduction to compressive buckling	4.1. Definition
·	4.2. Critical load. Euler's formula.
	4.3. Limitations of Euler's formula.
	4.4. Practical applications.
6. Introduction to torsion	6.1. Definition.
	6.2. Torsion in circula shafts.
	6.3. Torque diagrams
	6.4. Torsional stresses and deformations.

Planning				
	Class hours	Hours outside the classroom	Total hours	
Lecturing	32.5	49	81.5	
Laboratory practical	9	23	32	
Project based learning	9	24.5	33.5	
Essay questions exam	3	0	3	

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Lecture where theoretical principles are presented using digital media, videos and blackboard.
Laboratory practical	Activities of application of the knowledge to concrete situations and of acquisition of basic skills and procedural skills related with the subject of study.
Project based learning	Resolution of problems related to real case studies

Personalized assistance			
Methodologies	Description		
Laboratory practical	The students can ask the lecturers for the clarification of those concepts presented in the lecturers and practicals, as well as to clarify / discuss any doubts that may appear after the end of the sessions. The tutoring sessions may be carried out by telematic means (Remote Campus, Faitic, etc.) under the modality of prior agreement.		

Assessment	
Description	Qualification Training and
	Learning
	Results

Laboratory practical	A) it will evaluate the attendance and active participation in all the practicals of the semester, as well as the correct delivery (time and form) of all the documentation requested (reports, exercises, etc.). Practical sessions will be held in a fixed date, so it is not possible to attend the practical in a later date. Whether the student does not attend to a practical, he/she must demonstrate that the absence was due to unavoidable reasons (e.g. medical reasons). Practicals will marked with the value indicated, only when the student reaches the minimum mark in the written exam, which is 45%. (See following section: 'Other comments')	2.5	B3 B4	C14	D1 D2 D9 D10 D16 D17
Project based learning	C) Written tests to evaluate the individual work delivered by the student. It will be compulsory the attendance to the 90% of the practicals to obtain the marks given in section C. The marks obtained in the sections A will proportionally affect to the marks of the section C. The section C will be marked with a maximum value of 12,5% of the total mark, only when the student reach the minimum mark in the written exam, which is 45%. (See following section: 'Other comments')	12.5	B3 B4	C14	D1 D2 D9 D10 D16
Essay questions exam	Written exam in the dates established by the School.	85	B3 B4	C14	D1 D2 D9 D10 D16

Other comments on the Evaluation

Students resigning continuum assessment (after School aproval) will be evaluated only through the written exam which will be graded with 100% of final mark.

Continuum assessment is composed of sections A and C. The maximum mark for continuum assessment (NEC) is 15%, which will be computed from the following equation: NEC (%) = $0.25 \cdot (A) + 1.25 \cdot (C) \cdot (A)$; where A and C are granted 0-1.

Ethical commitment: it is expected an adequate ethical behavior of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Recommendations

Other comments

Requirements: To register for this module the student must have passed or be registered for all the modules of the previous year.

Contingency plan

Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in

advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

* Teaching methodologies that do not change

All the methodologies keep being the same as they can be held using the Campus Remoto platform complemented with faitic:

- Lecturing
- Project based learning
- Laboratory practical (only if mix teaching is adopted)
- * Teaching methodologies to be modified
- "Laboratory practical" will be substituted by "Systematic observation", which will be measured by carrying out experiments or reports that the students can carry out from their homes. The periodicity would be weekly and of temporary dedication equivalent to the laboratory practices.
- * Non-attendance mechanisms for students personal attention (tutoring)

The tutoring will be carried out by email to the teacher of the subject, who will be able to solve the doubts by email, or invite the student to participate in a tutorial through the remote teaching tools, Remote Campus, Teams, etc.).

* Changes in the contents (if applicable)

No modification in the contents is envisaged.

* Additional bibliography

Detailed notes will be provided to complement the material presented in the classes taught through the Remote Campus.

* Other

=== ADAPTATION OF THE ASSESSMENT ===

* Tests that are modified

[Laboratory practical] => [Systematic observation] [5%]

(this correspond to mark "A", in the formula for continuos assessment)

[Project based learning]=> [Resolution of exercises] [10%]

(this correspond to mark "C", in the formula for continuos assessment)

The Continuous Assessment Mark (NAC), will be calculated as follows: NAC = $(0'5\cdot A) + 1,0$ (C)·A; where A y C: 0-1.

[Essay question exam] => [Essay question exam] [50%]

* New Tests

[objective questions exam][35%]

Throughout the course, questionnaires will be carried out for the subjects previously taught, so that the subject can be monitored using telematic means.

* Additional information
