Learning outcomes	
Expected results from this subject	Training and Learning Results
Acquire the basic knowledge on matrices, vector spaces and linear maps.	
Handle the operations of the matrix calculation and use it to solve problems to systems of linear	
equations.	
Understand the basic concepts on eigenvalues and eigenvectors, vector spaces with scalar product and quadratic forms used in other courses and sove basic problems related to these subjects.	
Perform basic exploratory analysis of databases.	
Model situations under uncertainty by means of probability.	
Know basic statistical models and their application to industry and perform inferences from data	
samples.	
Use computer tools to solve problems of the contents of the course.	

Contents	
Topic	
Preliminaries	The field of complex numbers.
Matrices, determinants and systems of linear	Definition and types of matrices.
equations.	Matrices operations.
	Elementary transformations, row echelon forms, rank of a matrix.
	Inverse and determinant of a square matrix.
	Consistency of systems of linear equations and their solutions.
Vector spaces and linear maps.	Vector space. Subspaces.
	Linear independence, basis and dimension.
	Coordinates, change of basis.
	Basic notions on linear maps.
Eigenvalues and eigenvectors.	Definition of eigenvalue and eigenvector of a square matrix.
	Diagonalization of matrices by similarity transformation.
	Applications of eigenvalues and eigenvectors.
Vector spaces with scalar product and quadratic	Vectorial spaces with scalar product. Associated norm and properties.
forms.	Orthogonality. Gram-Schmidt orthonormalization process.
	Orthogonal diagonalization of a real and symmetric matrix.
	Quadratic forms.
Probability.	Concept and properties.
	Conditional probability and independence of events.
	Bayes Theorem.
Discrete random variables and continuous	Definition of random variable. Types of random variables.
random variables.	Distribution function.
	Discrete random variables. Continuous random variables.
	Characteristics of a random variable.
	Main distributions: Binomial, Geometric, Poisson, Hypergeometric,
	Uniform, Exponential, Normal.
	Central Limit Theorem.
Statistical inference.	General concepts.
	Sampling distributions.
	Point estimation.
	Confidence intervals.
	Tests of hypotheses.
Regression.	Scatterplot. Correlation.
	Linear regression: regression line.
	Inference about the parameters of the regression line.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	40	81	121
Problem solving	12	12	24
Laboratory practical	24	12	36
Autonomous problem solving	0	40	40
Essay questions exam	4	0	4

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	The lecturer will explain the contents of the course.
Problem solving	Problems and exercises will be solved during the classes. Students will also solve similar problems
	and exercises.
Laboratory practical	Computer tools will be used to solve problems related to the contents of the course.
Autonomous problem solving	Student will have to solve problems and exercises by their own.
Solving	

Personalized assistance			
Methodologies	Description		
Laboratory practical			
Lecturing			
Problem solving			
Autonomous problem solving			

Assessment			
	Description	Qualification	Training and Learning Results
Problem solving	Students will make several mid-term exams of Algebra and Statistics during the course.	40 por cento en Álxebra; 20 por cento en Estatística	
Essay questions exam	At the end of the semestre there will a final exam of Algebra and a final exam of Statistics.	60 por cento en Álxebra; 80 por cento en Estatística	

## Other comments on the Evaluation

At the end of the first quarter, once the mid-term exams and the final exams have been done, the student will have a grade out of 10 points in Algebra (A) and a grade out of 10 points in Statistics (S). The final qualification of the subject will be calculated as follows:

- If both grades, A and S, are greater or equal to 3.5, then the final grade will be (A+S)/2.
- Any of the grades A or S is less than 3.5, then the final qualification will be the minimum of the quantities (A+S)/2 and 4.5.

The students who are exempted by the School from taking the mid-term exams will be evaluated through a final exam of Algebra (100% of the grade of this part) and a final exam of Statistics (100% of the grade of this part). The final grade will be calculated according to procedure described above.

A student will be assigned to NP ("absent") if he/she is absent in both final exams (i.e. Algebra and Statistics); otherwise he/she will be graded according the the procedure described above.

The assessment in the second call (June/July) will be done by means of a final exam of Algebra and a final exam of Statistics (100% of the grade of each part). The final grade will be calculated according to procedure described above.

If at the end of the first quarter a student obtains a grade equal to or greater than 5 out of 10 in any of the parts of the subject (Algebra or Statistics) then he/she will keep this grade in the second call (June/July) without retaking the corresponding exam.

**Ethical commitment:** Students are expected to commit themselves to an adequate and ethical behaviour. Students showing unethical behaviours (exam cheating, plagiarism, unauthorized use of electronic devices, etc.) will be rated with the minimum grade (0.0) in the current academic year.

As a general rule, the use of any electronic device for the assessment tests is not allowed unless explicitly authorized.

Mathematics: Calculus I/V12G380V01104

# **Contingency plan**

## **Description**

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

## === ADAPTATION OF THE METHODOLOGIES ===

#### **ALGEBRA**

=== ADAPTATION OF THE METHODOLOGIES ===

\* Teaching methodologies maintained

The teaching will follow its planning, but it will be carried out using UVIGO's technological platform.

\* Non-attendance mechanisms for student attention (tutoring)

The tutorials will be carried out through the Remote Campus by appointment

=== ADAPTATION OF THE EVALUATION ===

The evaluation will follow its planning, but will be carried out using UVIGO's technological platform.

#### STATISTICS:

=== ADAPTATION OF THE METHODOLOGIES ===

\* Teaching methodologies maintained

Theoretical and practical teaching will be carried out telematically using the UVigo technological platfom.

\* Non-attendance mechanisms for student attention (tutoring)

The tutorials will be carried out through the Remote Campus by appointment

=== ADAPTATION OF THE TESTS ===

\* Tests already carried out

The weight of the mid-term exam will be maintained (20%).

\* Pending tests that are maintained

The mid-term exam (20%) will be maintained if it had not been done in-person. This exam will be carried out using UVigo's technological platform.

First semester exam: The exam will be a multiple-choice test (80%).

Final exam: The exam will be a multiple-choice test (100%).
