Skil	ls
Cod	e
B3	CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and the ability to communicate and transmit knowledge and skills in the field of industrial engineering specializing in Industrial Chemistry.
C10	E10 Knowledge of mass and energy balances, biotechnology, mass transfer, congration energiance, chemical reaction

C19 E19 Knowledge of mass and energy balances, biotechnology, mass transfer, separation operations, chemical reaction engineering, reactor design, and recovery and processing of raw materials and energy resources.

D1 CT1 Analysis and synthesis.

D2 CT2 Problems resolution.

D5 CT5 Information Management.

Methodologies

	Description
Lecturing	Presentation by the teacher of the general aspects of the programme in a structured way, with special emphasis on the fundamentals and the most important or difficult aspects for the student to understand. The professor will facilitate, through the platform MOOVI, the necessary material for a correct follow-up of the matter. The student will have to work previously the material delivered by the professor and consult the bibliography recommended to complete the information.
Problem solving	During the development of the subject, the resolution of questions and problems will be used in order to reinforce the aspects presented in the lectures.
Laboratory practical	Laboratory experiments and field trips to companies related to chemical reaction engineering and biotechnology will be carried out. The student will be provided with practice scripts as well as the necessary support material for a proper understanding of the experiments to be carried out. The student will prepare a final report in which the main results and conclusions will be presented.
Presentation	The students will make a presentation of the CASE STUDY carried out, and will be assessed by an examining board made up of the lecturers of the subject.

Introductory activities	In this activity, students will be introduced to the syllabus and practices to be developed during the course, as well as the objectives, competences and evaluation criteria. Likewise, the way the course will be developed will be explained to them, and the groups that will carry out the work and practicals will be created.
Case studies	Along the course, students will develop a group work, a CASE STUDY , related to the subject of the course, which will be proposed by the teachers using various scientific articles as starting material.

Personalized assistance			
Methodologies	Description		
Lecturing	During the hours of tutorships the students, individually or in group, can consult with the professors any doubt posed on the matter. The teacher will inform on the available schedule in the presentation of the matter.		
Problem solving	During the hours of tutorships the students, individually or in group, can consult with the professors any doubt posed on the matter. The teacher will inform on the available schedule in the presentation of the matter.		
Laboratory practica	I During the hours of tutorships the students, individually or in group, can consult with the professors any doubt posed on the matter. The teacher will inform on the available schedule in the presentation of the matter.		
Case studies	During the hours of tutorships the students, individually or in group, can consult with the professors any doubt posed on the CASE STUDY . The teacher will inform on the available schedule in the presentation of the matter.		

Assessment				
	Description	Qualificatio	Le	ining and earning Results
Problem solving	This matter is mainly practical, so the best way to evaluate the student's knowledge is by means of problem solving. Thus, throughout the four-month period, students will be assessed on the basis of exercise resolution deliverables	10	B3 B4	C19 D2
Laboratory practical	Students will carry out different laboratory practicals and field trips. At the end of the various practicals and on the dates indicated by the teachers, they will have to hand in the practical reports and complete a questionnaire on the field trips.	10	B3 B4	
Presentation	Students must present a CASE STUDY which will be assessed by an examining board made up of the lecturers of the subject.	10	B3 B4	D1
Case studies	Students will carry out a CASE STUDY as a group. Report will be worth 10% of the final grade.	10		D1 D5
Essay questions exam	This subject is mainly practical, so in the final exam the student's knowledge will be assessed by solving problems.	30	B3 B4	C19 D2
Objective questions exam	In the final exam the student will have to answer a series of short questions or multiple-choice questions in which they will have to demonstrate their knowledge as well as their capacity for synthesis. In addition, during the four- month period, multiple-choice exams may be held, which may account for up to 1/4 of the grade assigned to this section.	20	В3	D1
Oral exam	There will be an individual oral examination of the laboratory practicals carried out in the course.	10	B3 B4	D1

Other comments on the Evaluation

CONTINUOUS ASSESSMENT

All students will be assessed on a continuous basis through the development of the CASE STUDY, practicals, multiplechoice questionnaires and problem solving.

Problem solving (10%): during the course, students will carry out different problem solving tasks, as well as multiplechoicetests.

CASE STUDY (20%): throughout the four-month period, students will have to carry out a group work in which they will use the different knowledge they are acquiring in the subject. The lecturer will plan seminars to monitor the work in which the progress of the work will be assessed. The partial evaluations of deliverables on the work carried out during the course as well as the evaluation of the final presentation of the work (report and presentation) constitute 20% of the mark for the subject, with 10% corresponding to the report and follow-up and 10% to the presentation. Laboratory practicals and field trips (20%): During the four-month period, students will carry out laboratory practicals and field trips, which will account for 20% of the final mark for the course. The total mark for the practicals and field trips will be divided in the following way: 10% individual oral examination of the practicals and 10% the practical report and the test on field trips. A minimum attendance of 90% of the practices and field trips of the subject is required to be entitled to the evaluation of the same. Otherwise, the mark for this section will be 0.0 and the student will have to take a test in the final exam. Similarly, a minimum of 40% of the mark for the practicals must be achieved. If a minimum mark is not achieved in the practicals, an exam on the practicals must be taken during the final exam.

Multiple-choice questionnaires: throughout the term, multiple-choice questionnaires may be taken, which may be worth up to 1/4 of the mark assigned to the exam of objective questions.

FINAL MARK

The final mark will be the sum of the marks obtained in each section as long as a minimum mark is achieved in the exam (50% of the maximum mark). If the minimum mark is not reached in the exam, this will be the mark that will appear in the final mark.

SECOND CALL

In the second call, the mark obtained in the practicals in the first call will be maintained (if 40% of the maximum mark is reached) and the mark obtained in the CASE STUDY will be maintained. Students who do not obtain 40% of the maximum mark in the practicals will have to take an exam in this second call.

RESIGNATION OF CONTINUOUS ASSESSMENT

If the student is granted permission to resign from continuous assessment, he/she will only be assessed by a final exam of the contents of the subject (theoretical and practical), which will be 100% of the mark.

ETHICAL COMMITMENT

Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices, for example) it will be considered that the student does not meet the requirements to pass the subject. In which case the overall mark for the academic year will be a fail (0.0). The use of any electronic device will not be permitted during the assessment tests unless expressly authorised. Bringing an unauthorised electronic device into the exam room will be considered grounds for failing the subject in the academic year and the overall mark will be a fail (0.0).

Other comments

To enrol in this subject it is necessary to have passed or enrolled in all the subjects of the courses lower than the course in which this subject is located.

In case of discrepancies, will prevail the version in Spanish of this guide.

Contingency plan

Description

=== EXCEPTIONAL MEASURES SCHEDULED ===

In front of the uncertain and unpredictable evolution of the sanitary alert caused by the COVID-19, the University of Vigo establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or partially face-to-face. These already planned measures guarantee, when required, the development of teaching in a more agile and efficient way by being known in advance (or well in advance) by students and teaching staff through the standardised and institutionalised tool of the teaching guides.

=== ADAPTATION OF THE METHODOLOGIES ===

* Educational methodologies to be maintained

-Introductory activities: to be carried out synchronously via remote campus.

-Lecture: to be carried out synchronously via remote campus.

-Problem solving: to be carried out synchronously via remote campus.

-CASE STUDY : the follow-up will be carried out via remote campus and virtual sessions will be provided to the groups to facilitate the work.

* Educational methodologies to be modified

-Laboratory practicals will be carried out virtually and field trips will be cancelled. The oral exam will be replaced by a multiple-choice exam.

- Presentation of the CASE STUDY : the students will make the recording of the presentation that will be sent for his evaluation by examining board made up of the lecturers of the subject.

*Non-face-to-face student support mechanism (tutoring sessions)

* Tutoring sessions individualizized previously concerted between the student and professor that will make in virtual dispatches/on-line platform

* Modifications (if they proceed) of the contents to be taught

No modification

* Additional bibliography to facilitate the self-study

No modification

* Other modifications

=== ADAPTATION OF THE EVALUATION ===

* Test already made

Proof XX: [previous Weight 00%] [Weight Proposed 00%]

* Pending proofs that keep

Proof XX: [previous Weight 00%] [Weight Proposed 00%]

...

...

* Proofs that modify [previous Proof] =&*gt; [new Proof] oral Examination practices will change by an on-line examination type New

* New test

* Additional Information

Vulnerable students: methodological adaptation will be carried out, providing them with additional specific information, if it is accredited that they cannot have access to the contents taught in a conventional way.

Assessment: The tests will be carried out face-to-face except in the case of a rector's resolution that indicates that they should be done in a non-face-to-face manner, being carried out in this way through the different tools made available to the teaching staff. The assessment criteria are maintained, adapting the tests to be carried out, if necessary, as indicated in the Rector's Resolution, using the telematic means made available to the teaching staff.
