General description

The aim pursued with this course is to guide the student in the acquisition of the knowledge and the skills needed to qualify him for the handling and application of the methodologies, techniques and tools oriented to the elaboration, organisation and management of projects and another technical documentation regularly used in Engineering Offices, in ways that prepare the student to make use of these skills to carry out similar activities in his future professional activity in the real world.

In order to achieve that goal, the course uses a broad approach of the subjects in its contents, looking for the integration of the knowledge achieved along the student's previous courses and its application through the methodology, organisation and management of several different modalities of technical works, as they constitute the true essence of the Engineer profession in the framework of his professional competences and fields of activity.

This course promotes the development of its associated skills by means of using active and technical collaborative methodologies. In this way, the contents explained in theoretical classes are implemented and developed in the practical activities -oriented to the industrial reality of the profession-, thus assimilating the agile and precise use of the different rules of application and of the professional best practices established, while being supported by the new technologies to document, elaborate, manage and present the technical documentation that correspond to each particular case.

Skills

Code	
B1	CG1 Ability to design, develop, implement, manage and improve products and processes in various industrial fields, through analytical, computational and experimental appropriate techniques.
B2	CG2 Ability to lead activities related to CG1 competence.
C18	CE18 Knowledge and skills to organize and manage projects. Know the organizational structure and functions of a project office.
D1	CT1 Analysis and synthesis.
D2	CT2 Problems resolution.
D3	CT3 Oral and written proficiency in the own language.
D5	CT5 Information Management.
D6	CT6 Application of computer science in the field of study.
D7	CT7 Ability to organize and plan.
D8	CT8 Decision making.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D14	CT14 Creativity.
D15	CT15 Objectification, identification and organization.
D16	CT16 Critical thinking.
D17	CT17 Working as a team.
D20	CT20 Ability to communicate with people not expert in the field.

Learning outcomes			
Expected results from this subject	Training and Learning Results		
Skills for using information and communication systems in the industrial field.		C18	D3 D5 D6 D9 D10 D17
Handling design methods, techniques and tools, and project organisation and management.	B1 B2	C18	D1 D2 D5 D6 D7 D8 D10 D15 D17 D20
Skills for the elaboration of project documents and other similar technical documents.	B1 B2		D1 D3 D5 D6 D7 D9 D14 D15 D17
Skills for the technical management and supervision of projects in the Industrial Engineering field.	B2	C18	D1 D2 D3 D5 D6 D7 D8 D9 D14 D16 D17 D20
Skills for appropriately communicating documents, procedures, and results in the Industrial Engineering field.			D3 D5 D6 D7 D14 D17 D20

Contents	
Topic	
1. Introduction and presentation of the course.	1.1. Presentation. 1.2. Learning guide for the course. 1.3. Criteria and norms for the development of the course. 1.4. Relevant professional and legal aspects.
2. The Engineering Office.	2.1. Introduction to the Industrial Engineering Office. 2.2. Works of the Engineering Office. 2.3. Infrastructure of an Engineering Office. 2.4. Organisation and management of an Engineering Office. 2.5. Introduction to decision-making tools applied to the Project context.
3. Technical reports and similar works.	3.1. Technical reports. 3.2. Assessments, valuations and budgets. 3.3. Other similar technical works. 3.4. Criteria and norms for the elaboration and presentation of technical works.

4. The Project Methodology.	4.1. Introduction. 4.2. Theories about the Project. 4.3. Methodology of the Project process. 4.4. The phases of an industrial project.
5. The normative and legal frame of the Project.	5.1. The legal regulations and the Project. 5.2. Specific applicable technical norms. 5.3. Standardization, certification, homologation and quality aspects. 5.4. Industrial property: patent rights and transfer of technology.
6. Documents in Industrial Projects.	6.1. Report. 6.2. Plans. 6.3. Specifications. 6.4. Measurements and Budget. 6.5. Specific studies.
7. Methods and techniques for the organisation and management of Projects.	7.1. Organisation, supervision and coordination of Projects. 7.2. Methods and techniques for the management of Projects. 7.3. Techniques for the optimisation of Projects. 7.4. Tools for the computer-assisted management of Projects.
8. Processing of Projects and of another technical documentation.	8.1. Criteria and norms for the processing of Projects. 8.2. Process for the certification of Projects and other technical documents. 8.3. Management of licences, permissions and authorisations before public and private institutions. 8.4. Bidding and contracting of Projects.
9. Engineering Supervision of industrial projects.	9.1. Professionals that take part in the execution of projects. 9.2. Functions and activities of the Engineering or Work Supervision Office. 9.3. Legal frame that regulates the functions and responsibilities of the Engineering Supervision Office. 9.4. Obligations of the Engineering Supervision Office in matters of health and Security at work.
10. Presentation and Oral Defence of Technical Documents.	10.1. Oral presentations. 10.2. Preparation of presentations using electronic means. 10.3. Development of presentations through videoconference means.
Assignment 1. Elaboration of a technical report or similar work.	The students, either individually or in teams, will elaborate a technical report -or similar work- on a subject related with the industrial engineering field, starting from the information provided by the lecturer, and taking into account the indications received about the methodology to be used.
Assignment 2. Elaboration of a small project.	Organised the students in groups of three or four members, they will elaborate the necessary project documents to propose an efficient solution to a problem or need belonging to the Industrial Engineering field, following formal rigour and technician criteria.
Assignment 3. Development of a basic planning and scheduling proposal for the execution of an industrial project.	Each student on his own will elaborate a proposal for the time and resources planning and programming for the process of execution of an industrial project, using the appropriate methods and computer tools, and elaborating the required statistics report for the project.
Assignment 4. Public presentation of the developed work.	Final group presentation by each of the work teams on the results of all -or part of- the practical works developed in the course, addressed to the whole of the course student group.

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	26	40	66
Project based learning	24	42	66
Design Thinking	0	6	6
Mentored work	0	6	6
Problem and/or exercise solving	4	0	4
Report of practices, practicum and external practices	0	2	2

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	The theoretical contents will be presented by the lecturer, complemented with the active intervention of the students, and in total coordination with the development of the practical activities programmed.
Project based learning	Realisation of an interdisciplinary project resembling a real case with the students arranged in groups, requesting active participation of all members, and with the guidance of the lecturer.

Design Thinking	Development of design activities, by the student teams, of products related with the topics of the industrial engineering discipline, making use of the "Design Thinking" methodology. This encompasses an incremental approximation to the final product concept, by extensively empathizing with the customer and their needs, and going through a number of intermediate mock-ups and models.
Mentored work	Elaboration under the supervision of the lecturer, either individually or in teams, of activities related with the contents of the course, starting from the provided initial information and following the procedures and methodologies recommended.

Personalized assistance

Methodologies	Description
Project based learning	Realisation of an interdisciplinary project resembling a real case with the students arranged in groups, requesting active participation of all members, and with the guidance of the lecturer.
Design Thinking	Development of design activities, by the student teams, of products related with the topics of the industrial engineering discipline, making use of the "Design Thinking" methodology. This encompasses an incremental approximation to the final product concept, by extensively empathizing with the customer and their needs, and going through a number of intermediate mock-ups and models.

Problem and/or exercise solving	35	B1 C18 D1 D5 D6 D8 D14 D15 D16
Report of practices, practicum and external practices	65	B1 B2 C18 D1 D2 D3 D5 D6 D7 D8 D9 D10 D14 D15 D17 D20

Other comments on the Evaluation

Assessment of student's work -individually and/or in groups, either face-to-face or non-presential- will be carried out by the lecturer by weighting appropriately the different grades obtained in the activities that were proposed along this course.

Students may opt to follow this course either in the 'Continuous Evaluation' or in the 'Non-Continuous Evaluation' modalities, this last only after obtaining the appropriate clearance from the EEI's Direction. In both cases the grading of the course will be made according to a numerical system, using values from 0.0 to 10.0 points according to the current laws that are applicable (R.D. 1125/2003 of 5th September, BOE Nr. 224 of 18th September). A minimum overall mark of 5.0 is required to pass this course.

For the First Announcement or Edition.

a) 'Continuous Evaluation' modality:

The final grade for the course will be calculated by combining the individual marks awarded in the assessment of the works proposed and elaborated in the practical classes (65% weight) along the course, with the mark awarded for the final test performed in the date stated by the School's Ruling (35% weight).

Those marks will assess the behaviour and the implication of the student both in class and in the realisation of the different programmed activities, plus the fulfillment of the deadlines for submitting the works that were proposed, and/or the presentation and defence of those works, etc.

Students not reaching the minimum value of 5.0 points out of 10.0 that are required for every section, they will either need to perform also the assessment in the Second Announcement date, or to elaborate additional works or practical exercises to achieve the learning goals that were established for the concerned sections.

b) 'Non-Continuous Evaluation' modality:

There is a two-week time period after the starting date of the course for the concerned students to justify with documents that it is not possible for them to follow the regular process of continuous evaluation.

In order to pass this course, students renouncing to continuous evaluation will be obliged to perform a final test covering the whole contents of the course, both theoretical and practical, including short questions, reasoning questions, problem solving and development of practical cases. The mark awarded to the student assessment will be the final grade for the course.

A minimum mark of 5.0 points out of 10.0 possible will be required to pass the course.

For the Second Announcement or Edition.

Students who did not pass the course in the First Announcement, but that could have passed some specific parts of the theory or practical blocks, will be allowed to be assessed only regarding the failed parts, keeping the marks formerly awarded for the parts already passed, and applying the same assessment criteria to them.

Students wishing to improve their qualification, or students that failed the course on the First Announcement, will need to assist to the Second Announcement, where they will be assessed about the whole contents of the course, both theoretical and practical, including short questions, reasoning questions, problem solving and development of practical cases. Students are required to reach a minimum mark of 5.0 points out of 10.0 possible to pass the course.

Ethical commitment:

It is expected an appropriate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall grade for the course in the current academic year will be a Fail (0.0).

Other comments

To register for this course, the students are required to have passed, or at least are registered in, all the courses from previous years to the one this course is placed on. It is necessary to stress the importance of having passed the two courses indicated in the previous section before taking this course.

Previously to the realisation of the scheduled assesments, students should check in the MooVi platform to know whether it is necessary for them to carry any particular documentation, materials, etc. into the exam room to perform the tests.

In case there are any discrepancies, the version in English of this guide will prevail.

Contingency plan

Description

In the face of the uncertain and unforeseeable evolution of the health alert caused by COVID-19, University of Vigo has established an exception planning that will be activated at the time the government offices and the own University mandate it. Such decision will be made based on safety, health and responsibility criteria, always guaranteeing the continuity of the teaching processes in a partial or full non-classroom scenario. Those already-planned steps will guarantee, at the moment it is required, the development of the teaching processes in a more streamlined and effective way as both the students and the lecturers will know about them beforehand (or with a broad anticipation), by means of the DOCNET standard institutional tool.

According to the instructions provided by the Vice-Rectorate for Learning Organization and Teaching Staff, the following three scenarios are required to be taken into account with their corresponding contingency level:

SCENARIO 1. Full-classroom modality.

All teaching activities will be carried out at the classroom, both for theory and laboratory classes, according to the typical way for the course in the years before 2020.

SCENARIO 2. Half-classroom modality.

In the case the half-classroom teaching modality is activated by the University government, such event will involve a reduction in the capacity of the usual teaching spaces where the full-classroom modality is developed. Because of that, as a first measure the School will provide the teaching staff of the course with the information regarding the new authorized capacities for such teaching spaces so that the teaching activities can be re-organized for the remaining time of the term. It must be pointed out that the necessary re-organization to implement will depend on the specific moment in the term in which this teaching modality is activated. The following guidelines will be followed in the re-organization or the teaching activities:

a) Communication. All students in the course will be informed through the MooVi teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, audio- or video-call, MooVi forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers' virtual offices.

c) Classroom and non-classroom activities. From the teaching activities that remain until the end of the term, those that could be carried out by all students in class need to be identified (prioritizing laboratory activities when possible), and those other that will be carried out remotely (theory classes are the ones that usually decrease in effectiveness less in this modality), to the effects of the planning of its efficient performance.

d) Teaching contents and learning goals. There will be no changes either in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the MooVi portal.

With regard to the tools used for the teaching activities in the non-classroom modality, the CAMPUS REMOTO and MooVi portals will be of preferential use, complemented if necessary with other solutions in order to address specific needs arising along the lecturing period.

SCENARIO 3. Non-classroom modality.

In the case the full non-classroom modality (discontinuation of all on-class learning and evaluation activities) is activated, the tools offered by the platforms currently available at University of Vigo -CAMPUS REMOTO and MooVi- will be of preferential use. The specific conditions for the re-organization to be carried out will depend of the particular time in the term in which such modality is mobilized. The following guidelines will be followed in the re-organization of the teaching activities:

a) Communication. All students in the course will be informed through the MooVi teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation and/or modification of the teaching methodologies. Even if the teaching methodologies for the course were fundamentally conceived towards the full-classroom modality, the teaching staff considers that they keep in essence their effectiveness in the non-classroom modality. That is why it is proposed to keep them as they are, even if special attention will be paid to their right development and results. Therefore, no changes will be made to the teaching methodologies initially defined for the course.

c) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, audio- or video-call, MooVi forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers' virtual offices.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Evaluation. No changes will be made neither to the evaluation tests, nor to their corresponding score weights, nor to their set dates.

g) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the MooVi portal.
