Contents					
Topic					
	CHARGE AND ELECTRIC FIELD	1.1 Electric Cha	rne		
I. LLLCTING	CHANGE AND LEECTING FILLD		Insulators and Indu	ced Charnes	
		1.3 Coulomb[s		cca charges.	
			d and Electric Forces	5.	
		1.5 Electric Fiel		-	
		1.6 Electric Fiel			
		1.7 Flootric Din	alaa		

1.7.- Electric Dipoles.

2 GAUSS'S LAW	2.1 Charge and Electric Flux.
	2.2 Calculating Electric Flux.
	2.3 Gauss's Law.
	2.4 Applications of Gauss's Law.2.5 Conductors in Electrostatic Equilibrium.
3 ELECTRIC POTENTIAL	3.1 Electric Potential Energy.
3 ELECTRIC POTENTIAL	3.2 Electric Potential.
	3.3 Calculating Electric Potential.
	3.4 Equipotential Surfaces.
	3.5 Potential Gradient.
4 CAPACITANCE AND DIELECTRICS	4.1 Capacitors and Capacitance.
	4.2 Capacitors in Series and Parallel.
	4.3 Energy Storage in Capacitors and Electric-Field Energy.
	4.4 Dielectrics, Molecular Model of Induced Charge, and Polarization
	Vector.
	4.5 Gauss's Law in Dielectrics.
E CURRENT RECICTANCE AND ELECTROMOTIV	4.6 Dielectric Constant and Permittivity.
5 CURRENT, RESISTANCE, AND ELECTROMOTIV	
FORCE	5.2 Current and Current Density.5.3 Ohm∏s Law and Resistance.
	5.4 Electromotive Force and Circuits.
	5.5 Energy and Power in Electrical Circuits.
	5.6 Basic Theory of Electrical Conduction.
6 MAGNETIC FIELD	6.1 Magnetic Field.
o. Mandalite files	6.2 Motion of Charged Particles in a Magnetic Field.
	6.3 Magnetic Force on a Current-Carrying Conductor.
	6.4 Force and Torque on a Current Loop.
	6.5 Biot-Savart□s Law.
	6.6 Magnetic Field Lines and Magnetic Flux.
	6.7 Ampère∏s Law.
7 MAGNETIC FIELD IN MATTER	7.1 Magnetic Substances and Magnetization Vector.
	7.2 Ampère⊡s Law in Magnetic Media.
	7.3 Magnetic Susceptibility and Permeability.
	7.4 Paramagnetism and Diamagnetism.
0. FLECTROMACNETIC INDUCTION	7.5 Ferromagnetism.
8 ELECTROMAGNETIC INDUCTION	8.1 Induction Experiments. 8.2 Faraday-Lenz's Law.
	8.3 Induced Electric Fields.
	8.4 Eddy Currents.
	8.5 Mutual Inductance.
	8.6 Self-Inductance and Inductors.
	8.7 Magnetic-Field Energy.
9 THERMODYNAMIC SYSTEMS	9.1 Classical Thermodynamics.
	9.2 Thermodynamic Systems and Classification.
	9.3 State Variables and State of a System.
	9.4 Equations of State.
	9.5 Thermodynamic Equilibrium.
	9.6 Change of State, Transformation or Process.
	9.7 Quasi-static Processes.
10 TEMPERATURE AND HEAT	9.8 State and Process Functions. 10.1 Thermal Equilibrium, The Zeroth Law of Thermodynamics, and
10 TEMPERATURE AND HEAT	Temperature.
	10.2 Thermometers and Temperature Scales.
	10.3 Ideal Gas Thermometers and the Kelvin Scale.
	10.4 Heat.
	10.5 Calorimetry and Heat Capacities.
11 THE FIRST LAW OF THERMODYNAMICS	11.1 Work.
	11.2 Work Done During Volume Changes.
	11.3 Internal Energy.
	11.4 The First Law of Thermodynamics.
	11.5 Internal Energy of an Ideal Gas.
	11.6 Molar Heat Capacities of an Ideal Gas.
	11.7 Adiabatic, Isothermal, Isobaric and Isochoric Processes for an Ideal
	Gas.
	11.8 Enthalpy.

12 THE SECOND LAW OF THERMODYNAMICS	12.1 Directions of Thermodynamic Processes.		
	12.2 Heat Engines, Refrigerators, and Heat Pumps.		
	12.3 The Second Law of Thermodynamics: Clausius and Kelvin-Planck		
	Statements.		
	12.4 Carnot Engine.		
	12.5 Carnot Theorems.		
	12.6 Thermodynamic Temperature.		
	12.7 Entropy.		
	· ·		
	12.8 Increase of Entropy Principle.		
	12.9 Entropy Change of an Ideal Gas.		
LABORATORY	1 How to Use a Multimeter. Ohm□s Law. Direct Current. Circuit with		
	Resistors.		
	2 Linear and Non-Linear Conductors.		
	3 Charge and Discharge of a Capacitor.		
	4 Analysis of a Parallel Plate Capacitor with Dielectrics.		
	5 Utilization of an Oscilloscope to Analyze Charge and Discharge		
	Processes.		
	6 Study of the Magnetic Field. Helmholtz Coils. Magnetic Moment. Hall		
	Effect.		
	7 Calorimetry. Water Equivalent of Calorimeter. Latent Heat of Fusion.		
	8 Thermodynamics of the Ideal Gas. Heat Capacity Ratio. Adiabatic Work.		
LABORATORY: UNSTRUCTURED ACTIVITY (OPEN	· · · · · · · · · · · · · · · · · · ·		
	Unstructured activity (open lab) sessions that cover the topics of the		
LAB) SESSIONS	above cited regular laboratory sessions. A practical problem will be		
	assigned to each team. Then, under the teacher\[\]s supervision, each team		
	must analyse the problem, select a theoretical model and experimental		
	means to obtain a solution.		

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	24.5	45	69.5
Problem solving	8	20	28
Laboratory practical	18	18	36
Objective questions exam	1	0	1
Problem and/or exercise solving	3.5	0	3.5
Essay questions exam	3	0	3
Report of practices, practicum and externa	9	9	

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Lectures are given by the teacher on the contents of the subject, theoretical bases and / or guidelines of a work, exercise or project to be performed by the students.
Problem solving	Activity in which problems and / or exercises related to the subject are formulated. The student must develop the appropriate or correct solutions through the repetition of routines, the application of formulas or algorithms, the application of procedures for transforming the available information and the interpretation of the results. It is usually used as a complement to the lecture sessions.
Laboratory practical	Activities for applying the knowledge to particular situations and for the acquisition of basic and procedural skills related to the subject. They are developed in dedicated rooms with specialized equipment (laboratories, computer rooms, etc.).

Personalized assistance	
Methodologies	Description
Lecturing	In office hours.
Laboratory practical	In office hours.
Problem solving	In office hours.
Tests	Description
Objective questions exam	In office hours.
Problem and/or exercise solving	In office hours.
Essay questions exam	In office hours.
Report of practices, practicum and external practices	In office hours.

Assessment

	Description	Qualification	and Learning Results
Objective questions exam	Tests for the assessment of acquired knowledge that include closed questions with different response options (true/false, multiple choice, matching of elements). Students select a response among a limited number of choices.	10	
Problem and/or exercise solving	Test in which the student must solve a series of problems and / or exercises in a time / conditions set by the teacher. In this way, the student should apply the acquired knowledge.	40	
Essay questions exam	Tests that include open questions on a topic. Students should develop, relate, organize and present knowledge on the subject in an argued response.	40	
Report of practices, practicum and external practices	Preparation of a report by the students which reflects the characteristics of the work that has been carried out. Students must describe the developed tasks and procedures, show the results or observations made, as well as the data analysis and processing.	10 I	

Other comments on the Evaluation

Doccrintion

Continuous assessment (denoted EC) will have a weight of 40% in the final mark, and will include the lab mark (20%, denoted ECL) and the class mark (20%, denoted ECA).

The mark ECA will be evaluated by means of tests on the topics covered in the lectures. These tests will comprise objective questions and/or essay questions.

The mark ECL will be evaluated by the lab reports and tests on the topics covered in the laboratory sessions.

Those students unable to attend the continuous assessment and who have been granted the waiver of the continuous assessment have the possibility of taking a final test to obtain a REC mark with a weight of 40% of the final mark. This test will include the contents of the lab sessions (weight of 20%, denoted RECL) and the topics covered in the lectures (weight of 20%, denoted RECA).

The remaining 60% of the final mark will be obtained by taking a final exam. This will consist of two parts: a theoretical part (denoted T) with a weight of 20% of the final mark, and another part on problem solving (denoted P) with a weight of 40% of the final mark. The theoretical part will consist of a test comprising objective questions and/or essay questions. Those students not attending the final exam will obtain a mark of non-presented.

Both the [fin de carrera] exam and any other ones held on dates and/or times different from those officially set by the School of Industrial Engineering (E.E.I.), could have an exam format different from the one previously described, although each part of the exam (EC or REC, T and P) will hold its weight in the final mark.

Final mark G for the continuous assessment modality:

$$G = ECL + ECA + T + P.$$

Final mark G for the assessment at the end of the course and July (RECL and RECA only for those students who have been granted the waiver of the continuous assessment):

$$G = ECL (or RECL) + ECA (or RECA) + T + P.$$

To pass the course, a student must obtain a final mark G equal to or higher than 5.

Ethical commitment: Every student is expected to follow an appropriate ethical behaviour. In the case that unethical conduct is detected (copy, plagiarism, utilisation of unauthorised electronic devices, or others), it will be considered that the student does not fulfil the necessary requirements to pass the subject. In this case, the final mark in the present academic year will be $\lceil suspenso \rceil$ (0.0).

Students should not possess or use any electronic device during the tests and exams, unless specifically authorised to do so. The mere fact that a student carries an unauthorised electronic device into the examination room will result in failing the subject in the present academic year and the final mark will be [suspenso] (0.0).

Recommendations

Other comments

Basic recommendations:

- 1. Basic knowledge acquired in the subjects of Physics and Mathematics in previous courses.
- 2. Oral and written comprehension.
- 3. Capacity for abstraction, basic calculus, and synthesis of information.
- 4. Skills for group work and communication.

In the event of discrepancy, the Spanish version of this syllabus prevails.

Contingency plan

Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

* Teaching methodologies maintained

__

* Teaching methodologies modified

All the methodologies (lecturing, problem solving and laboratory practical): in the blended learning regime face-to-face classroom activities will be combined with online lecturing through the virtual campus ([Campus Remoto[]), using FAITIC platform as an additional support. In the distance learning regime, online lecturing will take place through virtual campus ([Campus Remoto[]), using FAITIC platform as an additional support as well. To guarantee the access of the students to the materials and resources of the course other methodologies and media could be implemented if needed.

Laboratory practicals: in blended learning, the operation of experimental devices by the students and the associated data acquisition activities could suffer major restrictions. These activities will be mostly replaced by demonstrations developed by

acquisition activities could suffer major restrictions. These activities will be mostly replaced by demonstrations developed by the lecturer in the lab and watched by the students attending the lab session. These demonstrations could be followed online by the rest of the students. Data processing and analysis are greatly independent of the operation of experimental devices and can be developed outside the laboratory (in another classroom, at home, etc..), so such activities could be realized by students attending the lab as well as by students participating online. In the distance learning regime, the laboratory practicals will be developed entirely online and the operation of experimental devices and data acquisition activities to be done by the students will be completely replaced by demonstrations developed by the lecturer and/or specific audiovisual materials.

* Non-attendance mechanisms for student attention (tutoring)

Office hours and tutoring could be developed both face-to-face (provided that safety can be guaranteed) or online, by using asynchronous media (email, forum, etc.) or by videoconference (by making an appointment).

* Modifications (if applicable) of the contents

--

* Additional bibliography to facilitate self-learning

--

* Other modifications

--

=== ADAPTATION OF THE TESTS ===

* Tests already carried out

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

--

* Pending tests that are maintained

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

Final exam, part P 40%, the weight of the exam is maintained.

Final exam, part T 20%, the weight of the exam is maintained.

* Tests that are modified

[Previous test] => [New test]

ECA 20%, types of tests may include: objective questions exam, essay questions exam => ECA 20%, types of tests may include: objective questions exam, essay questions exam, problem and/or exercise solving.

ECL 20%, types of tests may include: essay questions exam, practices report 10% => ECL 20%, types of tests may include: essay questions exam, problem and/or exercise solving, practices report 10%.

* New tests

--

* Additional Information
