Gen	eral	Compulsory subject through which students carry out	a period of practi	ce in companies, teo	chnology centres or	
desc	ription	institutions, which allows them to develop practical sk	ills and make con	tact with the reality	of industrial agents	
	-	by integrating into their teams within activities and / c	or projects related	l to the subjects of t	he master.	
Skil	ls					
Cod	e					
A2	Student	s should be able to apply their acquired knowledge and	problem-solving	skills in new or unfa	amiliar	
	environr	ments within broader (or multidisciplinary) contexts rel	ated to their area	of study.		
A3	Student	s are able to integrate knowledge and deal with the co	mplexity of makir	ng judgements based	d on information	
which, being incomplete or limited, includes reflections on the social and ethical responsib			responsibilities link	ed to the		
	applicat	ion of their knowledge and judgements.				
A4	Student	s should be able to communicate their findings - and th	ie ultimate knowl	edge and reasons be	ehind them - to	
	specialis	st and non-specialist audiences in a clear and unambig	uous manner			
<u>B1</u>	Organiza	ation and planning skills				
<u>B2</u>	Problem	n solving.				
B3	Descion	making				
B4		tion management capacity.				
<u>B2</u>		a whiten communication in your own language.				
D0 D7	Comput	ar chills related to the field of study.				
$\frac{D}{C1}$	Knowing	a the concents of product life cycle to learn how to ann	v thom with an in	togral approach wit	th cuctainability	
CI	criteria t	through software tools and infrastructure and digital m	edia	itegral approach, wh	lii Sustainabiiity	
$\overline{C2}$	To know	μ and apply the principles and tools of Lean Manufacture	ing in the process	ses of design and de	velopment of	
02	products	s of the Industry 4.0 to materialize proposals of innovation	tion through conc	urrent engineering a	and ICT of	
	collabor	ative engineering.				
C3	Learn th	ne basics of cloud computing, components, tools and its	s orientation as ar	n Internet-based ser	vice.	
C4	Know ar	nd apply tools and techniques to capture, store, smart	analysis and visua	alize massive data.		
C5	To know	and know how to implement in the factories the archi	tectures, technolo	gies and protocols u	used in	
	commur	nication systems and local industrial networks.		-		
C6	Knowing	g the role of cyber security in the factories of the future	, the methods, te	chniques and limitat	tions to be able to	
	impleme	ent safe industrial infrastructures.				
C7 To know		the fundamentals of Artificial Intelligence and its mos	t important practi	cal applications for i	ts implementation	
	in the de	esign and manufacturing processes.				
C8	Know ho	ow to use artificial intelligence methods to model, desig	n and develop ap	oplications based on	reasoning and	
	inferenc	e engines to be implemented in the Industry.				
C9	Know th	e principles, techniques and systems that comprise the	e concept of Indus	strial Internet of Thir	ngs (IIoT) and its	
	relations	snip with design and manufacturing				

- C10 Knowing how to implement robust, flexible and fault-tolerant industrial control systems, through data acquisition and decision making systems appropriate to each situation.
- C11 Know and use the elements and principles of operation of cyberphysical systems resulting from the integration of physical, computational and communication processes.
- C12 Develop cyberphysical systems for application to product and process solutions in factories, using Systems Engineering procedures.
- C13 Use the integration of different data sources for the definition of flexible, reliable and efficient supply chain management systems, supported by the Industrial Internet of Things and optimized logistics management software tools
- C14 Know the concepts, principles and tools of intelligent manufacturing systems, which facilitate access to information and production data through automated tools for capturing, processing and displaying information
- C15 To know and apply the additive manufacturing technologies, the materials used and the application strategies in the design and manufacture of products.
- C16 Develop models, mock-ups and prototypes using additive manufacturing techniques and tools
- C17 Know the advanced techniques and tools of metrology, calibration and accreditation.
- C18 Develop advanced dimensional verification strategies for application to components and products in the connected industry
- C19 To know, use and know how to implement principles, applications, components, instrumentation and installations of advanced robotic systems for industry.
- C20 To know and know how to apply principles, techniques and equipment of immersion in virtual, augmented and hybrid reality for its implementation in the industry
- C21 To know and be able to use modeling and simulation tools by finite elements, finite differences and computerized fluid dynamics (CFD) as tools of Assisted Engineering (CAE)
- C22 Select the appropriate finite element difference (FEM) and computerized fluid dynamics (CFD) modeling and simulation tools to solve design and manufacturing engineering problems
- C23 Know and select the most suitable advanced CAD/CAM/CAE environments to be integrated and implemented in the Industry.
- C24 Knowing how to apply advanced design, manufacturing and engineering tools to the modeling and manufacturing of complex mechanical parts and assemblies in the industry
- C25 Know and be able to use techniques and tools for mathematical modeling and simulation of discrete event systems and dynamic systems for application in production environments.
- C26 Apply simulation tools to solve specific problems in plant management and integrate them into the implementation process of the 4.0 paradigms.
- C27 To know and apply the engineering techniques and tools for the industrialization of the product in Lean contexts
- C28 Developing strategies for the use of innovation capacity in design and manufacturing in industrial companies
- C29 To know and integrate rigorously the procedures and techniques necessary for the elaboration and implementation of research, development and innovation projects in the context of Industry 4.0
- C30 To develop critical/self-critical and communication skills in a research project, with excellence and quality criteria in national and international fields
- C31 Know the advanced computer tools for mathematical calculation and their use in design and manufacturing engineering applications
- C32 Select and apply advanced calculation tools for solving mathematical problems in the field of design engineering and manufacturing
- C33 Identify and develop key skills and abilities in multidisciplinary teams for the processes of implementation and evolution towards industry 4.0
- C34 Develop skills for competency-based management of people in high-performance teams in the context of Design and Manufacturing
- D1 Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
- D2 Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
- D3 Multidisciplinary teamwork

Learning outcomes Expected results from this subject Training and Learning Results The student is exposed to real situations in the company to experience and channel his professional Α3 potential A4 Β4 B5 B6 C33 C34 D1 D2 D3

The student has to integrate in multidisciplinary teams.	A3

Торіс	
Previous activities to the allocation of the destination	 Preparation of CV Interview with the personnel of the máster commissioned of the external practices Interview with the responsible personnel of the institution or company where will be developed the practices.
Allocation of destination	 Allocation of Activities and preparation of Dossier Identification and Allocation of functions to develop
Realisation of the period/s of practices:	 Integration in a group of work development of activities during the stay that have relation with the subjects and aims of the máster. Preparation of a dossier of activities made and functions exerted.

*The information in the planning table is for guidance	e only and does	not take into account the he	terogeneity of the students.

Methodologies	
	Description
Practicum, External practices and clinical practices	The student develops the activities in a context related to the exercise of his/her professional career, during a determined period, carrying out the functions assigned and foreseen in the internship proposal. Objectives: - To reflect on professional practice. - To put knowledge and skills into practice in a real professional environment. Mode: Guided. Nature: Practical. Scenario: They are developed in external non-academic spaces (companies, institutions, technological centres, laboratories,) of academic-professional interest for the students. Groups: Individual During the activity, the students will collect data, carry out personal interviews depending on the activity itself and what the teachers request. Write a report of the practices.

Personalized assistance			
Methodologies	Description		
Practicum, External practices and clinical practices	To put students in contact with companies, institutions, so that they can do the internship. To follow up the activities and transmit observations to the students once the internship is over. Control and Evaluation of the internship.		
Tests	Description		
Report of practices, practicum and external practices	 Preparation of evaluation activities and evaluation criteria/indicators - Review of the evidence of the evaluation activities. Communication of the results (publication of notes and data and/or review procedure) 		

Assessment				
Description	Qualification	Training and		
		Learning Results		

C33	Report of practices, practicum and external practices	Preparation of a report by the student reflecting the characteristics of the work carried out. The students must describe the tasks and procedures developed, show the results obtained or observations made, as well as the analysis and treatment of data. The report evaluates knowledge, skills and attitudes. Objectives: To evaluate higher thinking. Analysis, synthesis and evaluation are valued.	100	A2 A3 A4	B1 B2 B3 B4 B5 B6 B7	C1 C2 C3 C4 C5 C6 C7 C8 C9 C10 C11 C12 C13 C14 C15 C16 C17 C18 C19 C20 C21 C22 C23 C24 C25 C26 C27 C28 C29 C20 C21 C22 C3 C21 C22 C3 C21 C22 C3 C22 C3 C4 C5 C6 C7 C7 C8 C9 C10 C11 C12 C13 C14 C15 C14 C15 C17 C17 C17 C17 C17 C17 C17 C17 C17 C17	D1 D2 D3
