| General description | This course presents an overview of machine learning. The syllabus explains the different techniques and methods, including supervised and unsupervised learning. In the practical part, real cases will be solved. | | |

Training and Learning Results

| | |
|------|--|
| Code | |
| A1 | CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context |
| A2 | CB7 - Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study. |
| A3 | CB8 - the complexity of making judgments based on information that, while incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments. |
| A4 | CB9 - Students should be able to communicate their conclusions and the ultimate knowledge and rationale behind them to specialized and non-specialized audiences in a clear and unambiguous manner. |
| B2 | Successfully address all stages of an Artificial Intelligence project. |
| B3 | Search and select useful information needed to solve complex problems, handling with fluency the bibliographic sources of the field. |
| B4 | Elaborate adequately and with certain originality written compositions or motivated arguments, write plans, work projects, scientific articles and formulate reasonable hypotheses in the field. |
| B5 | Work in teams, especially multidisciplinary teams, and be skilled in time management, people management and decision making. |
| C10 | Ability to build, validate and apply a stochastic model of a real system from observed data and the critical analysis of the results obtained |
| C11 | Understanding and mastery of the main data analysis techniques and tools, both from a statistical and machine learning point of view, including those dedicated to the processing of large volumes of data, and the ability to select the most appropriate ones for problem solving. |
| C12 | Ability to plan, formulate and resolve all stages of a data project, including understanding and mastery of basic fundamentals and techniques for searching and filtering information in large data collections. |
| C15 | Knowledge of computer tools in the field of machine learning, and ability to select the most appropriate for solving a problem. |
| D3 | Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida. |
| D4 | To develop for the exercise of a citizenship respectful of democratic culture, human rights and gender perspective. |
| D7 | Develop the ability to work in interdisciplinary or transdisciplinary teams to offer proposals that contribute to sustainable environmental, economic, political and social development. |
| D8 | Value the importance of research, innovation and technological development in the socioeconomic and cultural progress of society. |
| D9 | Have the ability to manage time and resources: develop plans, prioritize activities, identify critical ones, set deadlines and meet them. |

| Expected results from this subject | |
|---|--|
| Expected results from this subject | Training and Learning Results |
| Ability to identify if a problem can be solved using a machine learning technique. | A3 B2 B3 B4 C12 D4 D7 D8 D9 |
| Obtain the ability to choose the most appropriate learning technique for a problem depending on the nature of the data. | A1 A2 A4 B2 C11 C15 D3 D8 |
| Ability to design and develop a learning model in a real programming environment. | A1 A2 A3 A4 B5 C10 C15 D3 D7 D9 |
| Master the different learning models and be able to apply them to real-world problems. | A2 B2 B3 C11 C15 D3 D8 |
| Know and understand the difference between classification and regression problems. | A1 A3 B3 C10 C11 |
| Understand how to compare the results of the different types of machine learning. | A2 A4 C10 C12 C15 D4 D8 D9 |

Contents

| Topic | |
|---------------------|----------------------------|
| Supervised learning | Introduction to learning |
| | Artificial Neural Networks |
| | Support Vector Machines |
| | Decision trees |
| | Regression |
| | Instance-based learning |
| Ensemble modeling | Ensemble modeling |

| | |
|--|--|
| Preprocessing, evaluation and regularization | Preprocessing and feature extraction techniques. Model creation and evaluation. Complexity & Regularization. |
| Unsupervised learning | Unsupervised learning: clustering |
| Reinforcement learning | Unsupervised neural networks Markov decision processes Reinforcement learning |

Planning

| | Class hours | Hours outside the classroom | Total hours |
|--------------------------|-------------|-----------------------------|-------------|
| Lecturing | 21 | 42 | 63 |
| Laboratory practical | 13 | 24 | 37 |
| Project based learning | 9 | 19 | 28 |
| Objective questions exam | 2 | 20 | 22 |

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

| | Description |
|------------------------|---|
| Lecturing | Theoretical teaching of the subject matter of the course |
| Laboratory practical | Solve practical problems by using the different techniques that will be explained in the theory classes. |
| Project based learning | Writing, under the supervision of the teacher, of reports explaining the resolution of the problems carried out in the laboratory practices and the results obtained. |

Personalized assistance

| Methodologies | Description |
|------------------------|--|
| Laboratory practical | Practical work carried out with the advice of the teacher. |
| Project based learning | Writing of the explanatory report under the teacher's supervision. |

Assessment

| | Description | Qualification | Training and Learning Results |
|--------------------------|---|---------------|-------------------------------------|
| Laboratory practical | Resolution of real world problems using the methodology, for which several techniques explained in theory will be used, and the student will be stimulated to generate new ideas for the resolution of these problems. | 20 | A1 B2 C12 D3 A2 B3 C15 D7 B5 |
| Project based learning | Writing of the report on the resolution of the real problems carried out in the laboratory practices. The writing of the report will include a bibliographic review of the most important works related, written in English for the most part, documentation on the problem to be solved, methodology used, and comparison of the results found in the application of the different techniques, as well as a critical evaluation of both the results obtained and the information used. | 30 | A3 B2 D4 A4 B3 D8 B4 D9 B5 |
| Objective questions exam | Test questions about the contents of the course, based on the different machine learning techniques and their applications. | 50 | A2 B3 C10 D4 C11 D8 D9 |

Other comments on the Evaluation

EVALUATION CRITERIA FOR ALL STUDENTS IN ALL OPPORTUNITIES

Students must achieve at least 40% of the maximum mark for each part (theory, practice) and in any case the sum of both parts must exceed 5 to pass the subject. If any of the above requirements is not met, the grade of the call will be established according to the lowest grade obtained.

In the second opportunity, the evaluation will be carried out with the same criteria, and a new term will be opened for the delivery of the practical works.

The deliveries of the practices must be made within the period established in the virtual campus and must follow the specifications indicated in the statement both for their presentation and their defense.

Students will have the condition of "Presented" if you attend the theoretical test in the official evaluation period.

In the case of fraudulent completion of exercises or tests, the Regulations for evaluating the academic performance of students and reviewing qualifications will be applied. In application of the corresponding regulations on plagiarism, the total or partial copy of any practice or theory exercise will suppose the suspense in the activity in which plagiarism has been detected, with a grade of 0.

EXAM DATES

The official exam dates for the different opportunities, will be published on the ESEI

website: <https://esei.uvigo.es/docencia/exames/>

CONSULTATION/REQUEST OF TUTORING SESSIONS

Tutoring sessions schedules can be consulted through the faculty's personal page, available at

<https://esei.uvigo.es/docencia/profesorado/>

Other comments

All students are reminded of the prohibition of the use of mobile devices in exercises, practices and exams, in compliance with article 13.2.d) of the Statute of the University Student, regarding the duties of the university student body, which establishes the duty to "Refrain from using or cooperating in fraudulent procedures in assessment tests, in the work carried out or in official university documents."
