Web				
General	In this subject the main aim is to develop the capacity	to design and ca	Iculate performa	ances of jet engines and
description	their components.	to doorgin and ca		
	d Loorning Doculto			
	d Learning Results			
Code			a contrata da strata	
	to design, build and select the most suitable power plan	t for an aerospac	e venicle, includ	ing self-derived power
plants				
i	te knowledge of aerojets, gas turbines, rocket engines a			
A17 Ability t	to undertake the mechanical design of different compon	ents of a propuls	ion system as y	vell as the propulsion

A17 Ability to undertake the mechanical design of different components of a propulsion system, as well as the propulsion system as a whole.

A18 Ability to design, execute and analyze propulsion system tests, and to carry out the complete propulsion system certification process.

A19 Adequate knowledge of the different subsystems of aerospace vehicle propulsion plants.

Expected results from this subject	Training and Learning Results
GO11. Aptitude to project, build and select the plant of power more adapted for an aerospace vehicle, including the plants of power autoderivated.	A11
GO16. Know adapted of jet engines, turbines of gas, engines rocket and turbomáchinery.	A16
GO17. Capacity to tackle the mechanical design of distinct components of a propulsive system, as well as of the system propulsive in his group.	A17
GO18. Capacity to design, execute and analyse the essays of propulsive systems , and to carry out the complete process of certification of the same	A18
GO19. Suitable knowledge of the distinct subsystems of the propulsive plants of aerospace vehicles.	A19

Contents Topic

Performances of jet engines	-Global performances: biaxial, turbofans,
	-Performances of components: takings, compressors, cameras of
	combustion, turbines, nozzles
	-Non- steady state performances

Essays and material	-Banks of essays -Calculation of the no measured parameters -Models pre-essay -Material used in jet engines
Multidisciplinary appearances of propulsive systems	-Interaction with other subsystems -objective Functions -Application to the design of systems of control -Other appearances to consider
Technicians of simulation	-Types of models of jet engines -Decomposition of systems -Levels of fidelity

*The information in the planning table	is for quidance only and does no	at take into account the hot	araganaity of the students	

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies		
	Description	
Lecturing	Exhibition by part of the professor of the contents on the matter object of study, theoretical bases and	
	guidelines of a work or exercise that the/the student has to develop.	
Problem solving	Activity in which they formulate problems and /or exercises related with the matter. The stu has to develop the suitable solutions by means of the exertion of routines, the application o formulas or algorithms, the application of procedures of transformation of the available information and the interpretation of the re is used to employ as I complement of the theoretical lesson	
Mentored work	red work Activity in which they formulate a problem of design related with the matter. The student has to develop by his account the suitable solutions by means of the exertion of routines, the application of formulas or algorithms. At the end of the course has to present the work in class	

Methodologies Description		
Problem solving	Realisation of practical problems on the contents of the subject, the which will be explained and initiated in the classroom to be finished and delivered by part of the students out of the classroom. The students will have of the personal lessons necessary with the professor for the follow-up of the development of the cases of study	
Mentored work	Realisation of a work on the contents of the subject, the which will be explained and initiated in the classroom to be finished and delivered by part of the students out of the classroom. The students will have of the personal lesons necessary with the professor for the follow-up of the development of the cases of study

Other comments on the Evaluation

First Opportunity Evaluation

To pass the subject on the 1st opportunity, it will be necessary to obtain a grade higher than 5 out of 10 in the overall assessment of continuous evaluation during the course and the exam on the official date. Additionally, the grade for the official exam must be equal to or higher than 5 out of 10. The final grade for continuous evaluation will be determined according to the indicated percentages.

For the overall evaluation, there will be an exam on the official date, which includes all the contents of the subject, including the contents and methods used in the coursework. The passing grade for this exam will be 5 out of 10.

The officially approved schedule of evaluation tests by the EEAE Center Board will be published on the website:

http://aero.uvigo.es/en/docencia/exams

The continuous evaluation tests will be conducted during regular class hours.

Students have the right to choose the overall evaluation procedure and deadline set by the institution for each examination session.

Second Opportunity Evaluation

Students must take the resit exam, which covers all the subject contents and accounts for 100% of the final grade, if the final grade for continuous evaluation is lower than 5 out of 10. They must also take the resit exam in the following cases:

• Obtaining a grade lower than 5 out of 10 in the final exam of the first opportunity.

If a grade equal to or higher than 5 is obtained in the resit exam, the final grade for the subject will be the higher grade between:

- The resit exam grade.
- The average grade from the coursework activities (taking into account the percentage distribution specified in the evaluation table, substituting the grade of the first opportunity exam with the grade of the resit exam).

Final Year Evaluation

For the final year evaluation, there will be an exam on the official date, covering all the subject contents. The passing grade for this exam will be 5 out of 10.
