**General description** The aim of this course is to train the students in the selection of the most suitable CAD, CAM and CAE systems according to the specific case of application, in the frame of the Industry 4.0 paradigm.

The course will make the students to get involved in the practical use of the different tools available within those systems, allowing them to explore their capabilities and limitations, going all the way to the elaboration of benchmarking analysis and specification documents about such systems.

## Training and Learning Results

|      |   |
|------|---|
| Code |   |
| A1   | Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context                                      |
| A2   | Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study. |
| A4   | Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner             |
| B1   | Organization and planning skills  |
| B3   | Decision making   |
| B7   | Computer skills related to the field of study.  |
| C23  | Know and select the most suitable advanced CAD/CAM/CAE environments to be integrated and implemented in the Industry.   |
| C24  | Knowing how to apply advanced design, manufacturing and engineering tools to the modeling and manufacturing of complex mechanical parts and assemblies in the industry                                |
| D1   | Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society      |
| D2   | Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources                        |

## Expected results from this subject

|   |                               |
|---|-------------------------------|
| Expected results from this subject  | Training and Learning Results |
| Knowing the most appropriate CAD/CAM/CAE environments to be implemented in the context of Industry 4.0. | A1<br>B1<br>B7<br>C23         |

|  |  |
|--|--|
| Selecting the appropriate CAD/CAM/CAE solutions to be implemented in response to specific demands, including the design and definition of integrated design and manufacturing systems. | A2<br>B1<br>B3<br>C24<br>D1<br>D2              |
| Applying advanced design and engineering tools to the modelling of complex mechanical parts and assemblies.  | A2<br>B3<br>B7<br>C24<br>D1<br>D2              |
| Applying advanced computer-assisted manufacturing and production engineering tools within the Industry 4.0 framework.  | A2<br>A4<br>B1<br>B3<br>C23<br>C24<br>D1<br>D2 |

## Contents

| Topic   |   |
|---|---|
| 1. CAD/CAM/CAE systems in Industry 4.0.                   | 1.1. Engineering processes in Industry 4.0.<br>1.2. CAx functionalities in Industry 4.0.  |
| 2. Integrated design and manufacturing systems.           | 2.1. Integration of systems.<br>2.2. CAx integrated systems -PDM and PLM- for design and manufacturing.   |
| 3. Solid modelling (CAD) systems oriented to the product. | 3.1. Hierarchies of entities in 3D CAD systems.<br>3.2. Parametric solid modelling.<br>3.3. Product structure.<br>3.4. The 'design intent'.<br>3.5. Elaboration of technical documentation. |
| 4. Computer-aided manufacturing (CAM) systems.            | 4.1. Typologies of CAM systems.<br>4.2. CAM systems to support different manufacturing processes.<br>4.3. CAD-CAM connectivity for product engineering.                                     |
| 5. Computer-aided engineering (CAE) systems.              | 5.1. Typologies of CAE systems.<br>5.2. CAE systems for supporting design.<br>5.3. CAE systems for manufacturing support.<br>5.4. CAD-CAM-CAE connectivity.                                 |
| 6. Applications of CAD-CAM-CAE systems.                   | 6.1. Applications of CAD systems to design.<br>6.2. Applications of CAM systems to manufacturing.<br>6.3. Applications of CAE systems to engineering.                                       |
| 7. Selection of AD-CAM-CAE systems.                       | 7.1. Evaluation of engineering needs and elaboration of technical specifications.<br>7.2. Analysis of CAx systems specifications.<br>7.3. Methodology for the selection of CAx systems.     |
| Practical exercise nr. 1.                                 | Elaboration of a practical assignment about a mechanical system using advanced CAD tools.   |
| Practical exercise nr. 2.                                 | Elaboration of a practical assignment related to the manufacturing engineering by machining of mechanical parts, using advanced CAM tools.  |
| Practical exercise nr. 3.                                 | Elaboration of a practical assignment involving the simulation of a mechanical system using advanced CAE tools.   |

## Planning

|                            | Class hours | Hours outside the classroom | Total hours |
|----------------------------|-------------|-----------------------------|-------------|
| Lecturing                  | 8           | 18                          | 26          |
| Autonomous problem solving | 4           | 19                          | 23          |
| Practices through ICT      | 9           | 14                          | 23          |
| Objective questions exam   | 1           | 0                           | 1           |
| Presentation               | 1           | 0                           | 1           |
| Systematic observation     | 1           | 0                           | 1           |

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

## Methodologies

Description

|                            |   |
|----------------------------|---|
| Lecturing                  | Exhibition by the professor of the contents on the matter that is object of study, its theoretical bases and/or work guidelines aiming to the assignments that the student has to develop.                                |
| Autonomous problem solving | Activity in which the students develop assignments and/or exercises related with the subject. The student/to has to perform the analysis and resolution of the problems and/or exercises by himself in an autonomous way. |
| Practices through ICT      | Activities to apply the gained knowledge in a certain context and to acquire basic and procedimental skills related to the matter by using ITC tools.   |

### Personalized assistance

| Methodologies              | Description   |
|----------------------------|---|
| Autonomous problem solving | Activity in which problems and/or exercises related with the subject are formulated. The student has to perform the analysis and resolution of the problems and/or exercises by himself in an autonomous way. For all the teaching modalities contemplated in the Contingency Plan, the tutorial sessions of could be carried out through telematic means -email, videoconference, FAITIC forums, etc.- under the modality of prior concertation of virtual place, date and hour. |

### Assessment

|                          | Description  | Qualification | Training and Learning Results |    |     |    |
|--------------------------|--|---------------|-------------------------------|----|-----|----|
| Objective questions exam | Tests composed of objective questions. Mid-term and final assessment.      | 40            | A1                            | B1 | C23 | D2 |
| Presentation             | Presentations. Assignments. Projects. Report of Laboratory activities.     | 40            | A2                            | B1 | C24 | D1 |
| Systematic observation   | Systematic observation. Complementary activities of continuous assessment. | 20            | A4                            | B3 | C24 | D1 |
|                          |  |               |                               | B7 |     | D2 |

### Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as established above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

### Recommendations

**Other comments**

---

The communication with the students will be made through the MOOVI distance learning platform, for which it will be necessary that the student accesses the course space in the platform previously to the start of the lecturing period.

Before the realisation of the evaluation tests, it is recommended that the students consult with the MOOVI platform to confirm the tests' date, place, recommendations, etc., as well as the needs regarding using manuals or any another material for carrying out the tests and elaborating the home assignment works.
