Subject Guide 2023 / 2024

and processes of refining, petrochemicals and carbochemicals

Code V09G291V01302 Study Grado en programme Ingeniería de la Energía

Descriptors **ECTS Credits** Choose Year Quadmester Mandatory 3rd 1st Teaching #EnglishFriendly

language Spanish

Department Domínguez Santiago, María de los Ángeles Coordinator Lecturers Domínguez Santiago, María de los Ángeles

E-mail admquez@uvigo.es Web http://https://moovi.uvigo.gal/

In this subject, the basic concepts of mass and energy balances, chemical reactors and unit operations based General in mass transfer more employed in the industry are explained. description

the fundamentals of the processes to which fossil energy resources are subjected before their use and the synthesis of organic compounds widely used in daily life are also explained

English Friendly subject: International students may requestfrom the teachers: a) materials and bibliographic references, b) tutoring sesions in English c) exams and assessments in English

Training and Learning Results

- $\overline{\mathsf{A1}}$ That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study
- That the students know how to apply their knowledge to their work or vocation in a professional way and that they possess the competences that are usually demonstrated through the elaboration and defense of arguments and the resolution of problems within their area of study
- That the students have the capability to gather and interpret relevant data (usually within their area of study) to issue judgments that include a reflection on relevant social, scientific or ethical issues
- That the students can transmit information, ideas, problems and solutions to a specialized and non-specialized audience
- A5 That the students develop those learning capabilities necessary to undertake further studies with a high degree of autonomy.
- Ability to draw links between the different elements of all the knowledge acquired, understanding them as components of a body of knowledge with a clear structure and strong internal cohesion.
- To suggest and develop practical solutions, using the relevant theoretical knowledge, to phenomena and problemssituations of ordinary reality that are specific to engineering, developing appropriate strategies.
- To be familiar with the relevant sources of information, including constant updating, in order to practice one ☐s profession competently, accessing all the present and future tools of information search, constantly adapting to technological and social changes.
- C24 Ability to design and manage procedures of applied experimentation, especially for the determination of transmission and thermodynamic properties, and for the modelling of systems and phenomena in the field of chemical engineering, fluid systems, heat transmission, matter transference operations, kinetics of chemical reactions and reactors.
- C25 Knowledge about material and energy balance, biotechnology, matter transference, separation operations, engineering of chemical reactions, design of reactors, and assessment and transformation of raw materials and energy resources.
- C26 Applied knowledge of the fundamentals of basic process operations.
- C27 Applied knowledge of the fundamentals of processes of refining, petrochemicals and carbon chemicals.

- D3 Understanding engineering within a framework of sustainable development with environmental awareness.
- D5 To become aware of the need for continuous training and the constant improvement of quality, developing the values that are characteristic of scientific thinking, showing flexible, open and ethical attitudes in the face of different situations and opinions, particularly as regards non-discrimination on the grounds of gender, race or religion, respect for fundamental rights, accessibility, etc.

Expected results from this subject Expected results from this subject		Training and Learning				
	Results					
Know and understand the basics of operations of separation and of the chemical reactors		В1	C24	D3		
	A2	В3	C25			
	А3	B5	C26			
	A4					
	A5					
Know the processes used to obtain fuel products and petrochemical raw materials	A2	B1	C27	D3		
	А3	B5		D5		
	A4					
	A5					
Know the techniques for measuring the properties of fuels		B1	C24			
		В3				
		B5				

Contents	
Topic	
Subject 1 Introduction	Introduction. General concepts.
Subject 2 Material and energy balances.	Material balances in systems with and without chemical reaction.
	Energy balances in systems with chemical reaction.
Subject 3 Operations of separation	Distillation.Rectification.
	Liquid-liquid extraction.
	Absorption.
Subject 4 Introduction to chemical reactors	Design of ideal chemical reactors
Subject 5 Natural gas and oil refining	Natural gas: constitution and conditioning.
	Characterisation of the oil. Fractionation, craquing, reformed, alquilation
	and coquization.Blending of products.
Subject 6 Petrochemical processes.	Main compound derivatives of the methane, ethene, propene and
	benzene.
Subject 7 Coal processes	Technological use of coal: pyrolisis, gasification,etc.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	40.3	80	120.3
Problem solving	20	7.2	27.2
Laboratory practical	8	0	8
Practices through ICT	8	6	14
Problem and/or exercise solving	1.5	30	31.5
Essay questions exam	1	0	1

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Presentation, by the teaching staff, of the main knowledge corresponding to the subject topics.
Problem solving	The teacher proposes a series of problems to the students to work on at home or in the classroom
Laboratory practical	The students will carry out practices related to basic operations
Practices through ICT	A process simulation program is used to simulate the unit operations studied: rectification, liquid-liquid extraction, absorption, etc.

Personalized assistance

Methodologies Description

Problem solving Students can consult the teacher, during tutorial hours, with any questions about theoretical or practical aspects of the subject.

Assessment

	Description	Qualification		Training and Learning Resu	
Lecturing	Activities will be carried out in Moovi and exercises in class or related to each of the topics. Expected results from this subject: Know the processes used to obtain fuel products and petrochemical raw materials.	15	B1 B3		D5
	To know the measurement techniques of the properties of fuels. To know the measurement techniques of the properties of fuels.				
Laboratory practical	The work and the report made by the students will be assessed. Expected results from this subject: Know and understand the basic aspects of separation operations and chemical reactors.		A3 B3 A4 B5	C25 C26	D5
Practices through ICT	The work and the report made by the students will be evaluated. Expected results from this subject: Know and understand the basics of the operations of separation and chemical reactors.	A	A3 B3 A4 B5	C25 C26	D5
Problem and/or exercise solving	An examination of basic operations problems will be carried out, which will take place on the date established in the official calendar of the center.	Ä	A2 B1 A5 B3	C25 C26	
	Expected results from this subject: Know and understand the basics of the operations of separation and chemical reactors.	i			
Essay questions exan	nAn exam will be held in the last week of the semester tackling natural gas and refining, petrochemicals and carbochemicals	25	B1	C25 C27	D3 D5
	Expected results from this subject: Know the processes used to obtain fuel products and petrochemical raw materials Know the techniques for measuring the properties of fuels				

Other comments on the Evaluation

Considerations on continuous assessment

To pass the subject, a minimum of 3.5/10 is required in each of the evaluable sections. In case that after adding all the marks, the value is equal to or greater than 5, but the minimum score is not reached in any of the evaluable sections, the final mark will be 4.

Considerations on global assessment

Students will have a maximum period of two months from the start of the course to refuse to continuous assessment.

This global test can include questions from laboratory practices and practices with the support of ICT, therefore, the student will be allowed to reach 100% of the mark.

Considerations on second opportunity:

In the second opportunity, the marks of the laboratory practices and practices with ICT support will be kept for those students who have passed these methodologies. For those students who have not passed them or have refused to carry out the continuous assessment, the second opportunity exam may include questions from these methodologies.
