| I.1. WAVE MOTION   |  |
|--|--|
|  | 1.1. Wave phenomena  |
|  | <ul><li>1.2. Fundamental characteristics of waves</li><li>1.3. The wave equation</li></ul>   |
|  | 1.4. Plane waves   |
|  | 1.5. Wavefront and wavevector  |
|  | 1.6. Cylindrical and spherical waves   |
|  | 1.7. Longitudinal and transverse waves   |
|  | 1.8. Huygens' principle  |
|  | 1.9. Reflection and refraction of waves  |
| I.2. MECHANICAL WAVES  | 2.1. The nature of mechanical waves  |
|  | 2.2. Longitudinal waves in thin rods   |
|  | 2.3. Longitudinal waves in springs   |
|  | 2.4. Transverse waves in strings   |
|  | 2.5. Power flow and intensity of a wave  |
|  | 2.6. Longitudinal waves in fluids  |
| I.3. DESCRIPTION OF PHYSICAL QUANTITIES BY   | 3.1. Differential of arc of a curve  |
| MEANS OF VECTOR ANALYSIS   | 3.2. Scalar fields   |
|  | 3.3. Directional derivative  |
|  | 3.4. Gradient  |
|  | 3.5. Vector fields   |
|  | 3.6. Flux of a vector field  |
|  | 3.7. Solenoidal fields   |
|  | 3.8. Divergence of a vector field  |
|  | 3.9. Ostrogradski-Gauss' theorem or divergence theorem   |
|  | 3.10. Divergence of a solenoidal field<br>3.11. Circulation of a vector field  |
|  | 3.12. Rotation or curl of a vector field   |
|  | 3.13. Stokes' theorem  |
|  | 3.14. Conservative fields  |
| II.1. GENERAL EQUATIONS OF   | 1.1. Definition of electric and magnetic fields  |
| ELECTROMAGNETISM   | 1.2. Field sources: macroscopic electric charges and currents  |
|  | 1.3. Relations among fields E and B and their sources: Maxwell's equations   |
|  | 1.4. Free charge   |
|  | 1.5. Polarization charge   |
|  | 1.6. Electric current  |
|  | 1.7. Polarization current  |
|  | 1.8. Magnetization current   |
|  | 1.9. Maxwell's equations as a function of fields E, D, B, and H  |
|  | 1.10. Boundary conditions for electromagnetic fields   |
|  | 1.11. Electrodynamic potentials  |
|  | 1.12. The energy law of the electromagnetic field  |
| II.2. TIME-INDEPENDENT FIELDS:   | 2.1. Fundamental equations of electrostatics   |
| ELECTROSTATICS, STEADY ELECTRIC CURRENT  | 2.2. Electric dipole   |
| AND MAGNETOSTATICS   | 2.3. Fundamental equations for steady electric current   |
|  | 2.4. Equations including media properties  |
|  | 2.5. Electrical resistance   |
|  |  |

|---|-----|----|-----|-----|----|

|                      | Description   |
|----------------------|---|
| Lecturing            | The main topics of the subject are introduced by the teacher using projected presentations and the chalkboard, emphasizing the theoretical basis and fundamentals and stressing the critical or key points. Occasionally, demonstrative experiments or audiovisual material may be employed   |
| Problem solving      | Academic problems related to the topics of the subject are formulated and worked out at the chalkboard by the teacher or the students. By practicing standard schemes, formulas or algorithms and by analyzing the results, the student must develop adequate skills to be able to obtain the correct solution to the problem on his/her own at the end of the course |
| Laboratory practical | Activities for applying the knowledge to particular situations and for developing basic and procedural skills related to the subject. These activities will be held in specific rooms with specialized equipment (laboratory and computer rooms)  |

| Personalized assistance |                   |  |  |  |

|                         | Description   | Qualification | Training and<br>Learning Results |
| Essay questions<br>exam | Tests that includes open questions on a topic. Students should develop, relate, organize and present knowledge on the subject in an argued response | 50            | B10 C2                           |

| Problem and/or<br>exercise solving                          | Test in which the student must solve a series of problems and/or exercises in a time/conditions set by the teacher  | 40 | B10 | C2 | D10 |
|---|---|----|-----|----|-----|
| Report of practices,<br>practicum and<br>external practices | Each team should write a report on the activities carried out. The report<br>must include the tasks and procedures developed, the results obtained<br>or the observations taken, as well as a detailed description of the data<br>processing and analysis | 10 | B10 | C2 | D10 |

## Other comments on the Evaluation

## 1. Ordinary call (December-January)

## 1.1 Continuous assessment

- The final mark G0 results from the classroom mark A0 (80% of the final mark), on topics of Parts I and II, and the lab mark L0 (20% of the final mark), on topics of Part III.

- Mark A0 combines the classroom mark C0 (40% of the final mark), that is obtained from theoretical-practical tests (essayquestions and problem/exercise solving) to be developed during the term, and the classroom mark F0 (40% of the final mark), that is obtained from an end-of-term theoretical-practical test to be held on the same date that the exam of the ordinary call.

- Mark L0 combines the mark L01 (10% of the final mark), that is obtained from theoretical-practical tests to be developed during the term (essay-questions and problem/exercise solving) on topics of Part III.1, and the mark L02 (10% of the final mark) that is obtained from a lab report corresponding to topics of Part III.2. Only students that have regularly attended the lab sessions can obtain a mark L0 different form "0,0".

- The final mark of the continuous assessment in the ordinary call is obtained as

G0 = A0 (80%) + L0(20%) = C0 (40%) + F0 (40%) + L01 (10%) + L02 (10%)

- To pass the course, a student must obtain a final mark G0 equal to or higher than 5.

## 1.2 Global assessment

- Those students who have been granted the waiver of the continuous assessment in the ordinary call will obtain 100% of their final mark G1 from a exam corresponding to the ordinary call.

- The final mark G1 results from the classroom mark A1 (80% of the final mark), on topics of Parts I and II, and the lab mark L1 (20% of the final mark), on topics of Part III.1.

- Mark A1 combines marks C1 (40% of the final mark) and F1 (40% of the final mark), that are obtained from theoreticalpractical tests (essay-questions and problem/exercise solving).

- Mark L1 (20% of the final mark) is obtained from a theoretical-practical test (essay-questions and problem/exercise solving).

- The final mark of the global assessment in the ordinary call is obtained as

G1 = A1 (80%) + L1(20%) = C1 (40%) + F1 (40%) + L1 (20%)

- To pass the course, a student must obtain a final mark G1 equal to or higher than 5.

## 2. Extraordinary call (June-July)

- All students, whether they have waived continuous assessment or not, will obtain 100% of their final mark G2 from an exam corresponding to the extraordinary call.

- The final mark G2 results from the classroom mark A2 (80% of the final mark), on topics of Parts I and II, and the lab mark L2 (20% of the final mark), on topics of Part III.1.

- Mark A2 combines marks C2 (40% of the final mark) and F2 (40% of the final mark), that are obtained from theoreticalpractical tests (essay-questions and problem/exercise solving).

- Mark L2 (20% of the finalmark) is obtained from a theoretical-practical test (essay-questions and problem/exercise solving).

- The final mark of the continuous or global assessment in the extraordinary call is obtained as

G2 = A2 (80%) + L2(20%) = C2 (40%) + F2 (40%) + L2 (20%)

- To pass the course, a student must obtain a final mark G2 equal to or higher than 5.

## 3. Common features and interconnection among the assessment alternatives

- In the continuous and global assessment modalities for the ordinary and extraordinary calls that have been defined in the previous sections, we can classify marks that are equivalent to each other in three sets with three elements each: classroom marks C0, C1 and C2, classroom marks F0, F1 and F2 and lab marks L0, L1 and L2. If C is the most recent valid mark from C0, C1 and C2, F is the most recent valid mark from F0, F1 and F2 and L is the most recent valid mark from L0, L1 and L2, the final mark G in the ordinary or the extraordinary call, either for continuous or global assessment, is obtained as

G =C(40%) + F (40%) + L(20%)

- To pass the course, a student must obtain a final mark G equal to or higher than 5 in any of the assessment alternatives.

- To obtain the final mark G2 in the extraordinary call the students, whether they have waived continuous assessment or not, can choose between:

a) answering the part of the exam of the extraordinary call corresponding to marks C2, F2, and/or L2, that will be used in the formula of the final mark of the extraordinary call G2.

b) use the most recent valid mark of each type (C0 or C1, F0 or F1 and/or L0 or L1) to be used instead of marks C2, F2 and/or L2, respectively, in the formula of the final mark of the extraordinary call G2, not taking the corresponding part of the exam of this call.

## 4. End-of-degree call

- The end-of-degree call follows the same assessment scheme as the extraordinary call.

- The end-of-degree assessment is completely independent of the assessments in the ordinary and extraordinary calls (in particular, the features and interconnections described in the previous section do not apply).

## 5. Supplementary assessment rules

- Students should not have access to or use any electronic device during the tests and exams, unless specifically authorized. The mere act of taking an unauthorized electronic device into the examination room will result in the student failing the subject and the final mark in the corresponding call will be "suspenso (0,0)".

- The tests and exams will be jointly set and assessed by the teaching team of the subject.

- The dates for the exams in each call will be assigned by the board of directors of the School ofIndustrial Engineering (E.E.I.).

## 6. Ethical commitment

Every student is expected to behave in an appropriate ethical manner. Should unethical conduct be detected (copying, plagiarism, utilization of unauthorized electronic devices, or others), the student will be considered not to have fulfilled the necessary requirements to pass the subject. In this case, the final mark in the corresponding call will be "suspenso (0,0)".

#### **Other comments**

Requirements: To register in this subject, it is mandatory to have been registered or to be registered in all the subjects corresponding to the first and second years of the curriculum of the Degree in Industrial Technologies Engineering

In particular, it is highly recommended to have reviewed the topics in Physics and Mathematics included within the subjects that should have been passed previously

In the event of discrepancy, the Spanish version of this syllabus prevails
