Internet Engineering

Subject	Internet Engineering			
Code	V05M145V01210			
Study programme	Máster Universitario en Ingeniería de Telecomunicación			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	5	Optional	1st	2nd
Teaching language	Spanish			
Department				
Coordinator	Fernández Veiga, Manuel			
Lecturers	Fernández Veiga, Manuel			
E-mail	mveiga@det.uvigo.es			
Web	http://moovi.uvigo.gal			
General description	Internet Engineering presents and analyses the state of the art on the deployment, operations and configuration of large distributed systems in the Internet. The subject covers the study of advanced channel coding techniques, software defined networking, multipath transmission, and also the architecture and main technical challenges of large data centers. A review of network and service virtualization techniques is also included. Students will achieve skills for innovation and research in the field of network engineering.			

Training and Learning Results

Code	
A5	CB5 Students must have learning skills to allow themselves to continue studying in largely self-directed or autonomous way
B1	CG1 Ability to project, calculate and design products, processes and facilities in telecommunication engineering areas.
B4	CG4 Capacity for mathematical modeling, calculation and simulation in technological centers and engineering companies, particularly in research, development and innovation tasks in all areas related to Telecommunication Engineering and associated multidisciplinary fields.
B8	CG8 Ability to apply acquired knowledge and to solve problems in new or unfamiliar environments within broader and multidiscipline contexts, being able to integrate knowledge.
B12	CG12 Skills for lifelong, self-directed and autonomous learning.
C4	CE4 Ability to design and plan networks for transporting, broadcasting and distribution of multimedia signals.
C6	CE6 Ability to model, design, implement, manage, operate, and maintain networks, services and contents.
C7	CE7 Capacity for planning, decision making and packaging of networks, services and applications, taking into account the quality of service, direct and operating costs, plan implementation, monitoring, safety procedures, scaling and maintenance, as well as managing and ensuring quality in the development process.
C8	CE8 Ability to understand and know how to apply the operation and organization of the Internet, new generation Internet technologies and protocols, component models, middleware and services.

Expected results from this subject

Expected results from this subject	Training and Learning Results
Knowledge and know-how about advanced channel coding techniques	B4 C4 C6
To understand the operations and properties of large distributed systems in the Internet. Deep knowledge and insights about advanced communication system	B1 B4 C4 C6 C7 C8

To learn how to analyze and put into use multi path transmission techniques and congestion control algorithms on different types of networks	A5 B4 B8 C4 C6 C7 C8
To understand the design principles, the operation and performance of large data centers in the Internet	A5 B1 B4 B12 C6 C7 C8
To command the principles of network & services virtualization. To learn how to perform resource allocation, to compare alternative architectures and comprehend the underlying Internet economic forces.	A5 B1 B4 B8 B12 C4 C6 C7 C8

Contents

Topic	
1. Coding for distributed storage	1.1 Locally recoverable codes 1.2 Regenerating codes 1.3 Case studies
2. Advanced channel coding	2.1 Capacity-approaching codes: LDPC, turbo 2.2 Capacity-achieving-codes: polar coding, SC-LDPC 2.3 Network coding
3. Networking technologies for 5G	3.1 M2M, URLLC and NB-IoT communications 3.2 Architectures and models for 5G networks
4. Resource allocation	4.1 Resource allocation in cloud systems 4.2 Load balancing techniques 4.3 Randomized policies. Optimal allocations 4.4 Auctioning
5. MEC & edge computing	5.1 Architecture and services 5.2 Technology: NOMA, CRAN, SWIPT 5.3 Massive multiple access
6. Coded caching	6.1 Centralized and distributed coded caching 6.2 Edge computing 6.3 Index coding
7. Machine learning for networks	7.1 Machine learning & data-driven networks 7.2 Optimization- and model-based machine learning 7.3 Deep learning, reinforcement learning 7.4 Case studies in 5G/6G

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	13	26	39
Laboratory practical	14	56	70
Laboratory practice	1	0	1
Essay questions exam	2	0	2
Problem and/or exercise solving	0	13	13

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Description

Lecturing	Descriptive exposure of concepts, technical problems and solutions of the state of the art in the discipline. Emphasis on the critical thinking ability to assess the models, the decisions and the operations of the systems under study. Through this methodology, the competencies CB5, CG1, CG4, CG8, CG12, CE4, CE6, CE7 and CE8 are acquired.
Laboratory practical	Development of an engineering project: design, planning, costs, dimensioning, configuration and testing, deployment and maintenance of a cloud-computing infrastructure. Through this methodology, the competencies CB5, CG1, CG4, CG8, CG12, CE4, CE6, CE7 and CE8 are acquired.

Personalized assistance

Methodologies	Description
Lecturing	Problem solving, advising about the material, recommended bibliography, further explanations of concepts and techniques. Individual mentoring about any of the latter matters. Office hours: [https://www.uvigo.gal/es/universidad/administracion-personal/pdi/manuel-fernandez-veiga]
Laboratory practical	Help with the design, installation, configuration and use of any software piece needed for developing the practical project. Individual office hours. Office hours: [https://www.uvigo.gal/es/universidad/administracion-personal/pdi/manuel-fernandez-veiga]

Assessment

	Description	Qualification	Training and Learning Results		
Laboratory practice	Functional and performance tests of the assigned engineering project. Critical assessment of the technical solutions, the design decisions and the implementation.	30	A5	B1 B4 B8 B12	C4 C6 C7 C8
Essay questions exam	Written examination, closed books, two hours length. The students will answer questions of conceptual and logical character on any one of the systems, components, algorithms or technologies that have been covered in the lectures.	40		B1 B4 B8 B12	C4 C6 C7 C8
Problem and/or exercise solving	Written homework, selected problems and exercises.	30	A5	B4 B8	C8

Other comments on the Evaluation

The student must choose between two alternative, mutually exclusive assessment method: continuous assessment or global assessment.

The continuous evaluation option consists in a final written exam (40% of the qualification), the completion of engineering assignments (30% of the qualification) and homework (30%). These assignments will be due the last working day preceding the start of the examination period. The eventual assessment option consists in a final written exam (60% of the qualification) and in the completion of assignments (40% of the qualification). The assignments will be due the last working day preceding the start of the examination period. The examinations of the continuous and the eventual assessment options may not be equal.

The students must declare their preferred assessment for global assessment right after the programming assignment is announced. A student cannot be considered as defective (not active) if continuous assessment is chosen.

The students who fail the course will be given an extraordinary opportunity at the end of the academic year to do so. Their academic achievements will be re-evaluated, both with a written exam (theoretical knowledge) and a review of their engineering project looking for improvement or changes. The weights are the same they were committed to, according to their choice.

Any assigned grade will only be valid during the academic year where it is awarded.
