	references in English, b) tutoring s	sessions in English,	c) exams and ass	sessments in Eng	glish.

#### **Training and Learning Results**

Code

- B1 CG1: The ability to write, develop and sign projects in the field of Telecommunication Engineering, according to the knowledge acquired as considered in section 5 of this Law, the conception and development or operation of networks, services and applications of Telecommunication and Electronics.
- B6 CG6: The aptitude to manage mandatory specifications, procedures and laws.
- B9 CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics.
- B12 CG12 The development of discussion ability about technical subjects
- C35 CE35/SI2 The ability to analyze, specify, carry out and maintain systems, equipments, heads and installations of TV, audio and video for mobile and fixed environments.
- C36 CE36/SI3 The capacity to implement projects at places and installations for the production and recording of audio and video signals.
- C37 CE37/SI4 The ability to carry out acoustic engineering projects related to: acoustical isolation and conditioning of rooms, loudspeaker installations, specification, analysis and selection of electro acoustical transducers, measurement, analysis and control of radio vibration systems, environmental acoustics, submarine and acoustical systems.
- C38 CE38/SI5 The ability to create, modify, manage, broadcast and distribute multimedia contents taking into account the use and accessibility criteria to audiovisual, broadcasting and interactive services.
- D4 CT4 Encourage cooperative work, and skills like communication, organization, planning and acceptance of responsibility in a multilingual and multidisciplinary work environment, which promotes education for equality, peace and respect for fundamental rights.

Expected results from this subject				
Expected results from this subject		Training and Learning Results		
Knowing the different types of existing amplifiers from a systemic and usage point of view, knowing how to interpret the technical specifications in order to be able to evaluate them	В6	C35		
Selecting a sound pick-up configuration to be applied in different situations		C35		
		C36

Contents	
Topic	
Sound reinforcement (electro-acoustic aspects)	Technical specifications in audio. Take. Amplification. Dimensioning and distribution. Sound field calculation exercises and computer simulation of the sound field
Visual overlay	Cameras, image sensors and lenses (exercises). Capture parameters, exposure, focus, depth of field. Field of view calculation Indoor and outdoor imaging technologies. Working with 3D modelling and scenario recreation applications.
Control systems, wiring and power supply	Design of cabling and wiring of an audio-visual network and its power supply. Synchronisation of audio and video signals in an audiovisual network. Control systems. Power supply.
Audiovisual networks	Indoor and outdoor applications.

Planning

Methodologies	
	Description
Practices through ICT	Use and adjustment of analysis tools and algorithms, identifying which one should be used in each situation.
	Software to be used: EASE Focus 3, Blender With this methodology they work the CE36 and CE37 competences, individually or in couples.

Project based learning	Collaborative work in reduced groups on a complex design that applies several topics covered in the subject. The work is periodically followed-up and it fosters working in group, role sharing, information sharing, planning and public defending of results.  With this methodology they work the CG1, CG6, CG9, CG12, CE35, CE36, CE37, CE38 and CT4 competences.
Lecturing	Presentation by the teacher of the contents of the subject, fostering the critical discussion of the concepts. The theoretical grounds of algorithms and procedures used to resolve problems are given.  With this methodology they work the CG1, CG6, CG12, CE35, CE36, CE37, and CE38 competences.

Personalized assistance			
Methodologies	Description		
Lecturing	Doubts can be solved in the rests of the classes and in the teacher tutorial sesions. These tutorial sessions will be done individually or in short groups (with a maximum of 2-3 students). The tutorial sessions are typically agreed with the professor. The meeting requests can be done personally or by email.		
Practices through ICT	In the classes of practices is a good moment to consult doubts with the professor. The professor moves between the tables and some students take advantage of the proximity of the professor to consult doubts of the own class or punctual doubts of other classes.		
Project based learning	The projects have its own classes of C group in which the students of each team consult their doubts about the project and the professor is with them helping to define the project and giving them support for the development of their particular project. They are classes with a very pleasant interaction.		

Assessment					
	Description	Qualification	Tra	ining a	and
			Learn	ning Re	esults
Project based learning	Assessment of a project, developed through the four-month period, including the preparation and public presentation of a report.  The corresponding individual mark to the works done in group is obtained as a ponderated sum of: 1) the common mark of the group (60%); 2) the individual mark (40%), obtained from one or various of the following methods of evaluation: cross-evaluation by the other members of the group, oral questions during the presentations of the works, written questions about the content of the work.		B1 B6 B9 B12	C35 C36 C37 C38	D4
Problem and/or exercise solving	Written evaluation tests, with brief questions and problems.	40	B1 B6 B12	C35 C36 C37 C38	
Report of practices, practicum and external practices	Assessment of a written inform that describes the work of several week in the computer classroom.	5 10	•	C36 C37	
Objective questions exam	Tests	10	B1 B6 B12	C35 C36 C37 C38	

# Other comments on the Evaluation

Following the guidelines of the degree, two systems of evaluation are offered: continuous assessment (recommended) and global assessment. Global assessment will be only allowed in situations in which it is imposible to follow the recommended system.

In case of detection of plagiarism in any of the tests (short tests, reports of the laboratory practices, reports of the directed works or final exam), the final grade will be of FAIL (0) and the fact will be communicated to the Centre Management for the opportune effects.

#### **ORDINARY EXAM**

# A) CONTINUOUS ASSESSMENT:

The continuous assessment will be based on the evaluation of practical task, projects and a test. Once a student has signed a document of agreement with the process of continuous assessment, and if not communicated otherwise within one month, it will be understood that the student has submitted to the call, and the final degree will be obtained by the application of the criteria described bellow, regardless of whether or not the final exam is taken.

The subject is assessed in a 0 to 10 points scale and is considered "passed" if each activity is graded equal or greater than 4, and the final grade obtained is equal or greater than 5. The final grade with be obtained from the weighted sum of the grade obtained in the following tasks with the given weights. If in anyof the activities the grade does not reach 4 but the average exceeds 5, thefinal grade will be 4.9.

Types and weights of the activities:

- 1. Tutored works: 40 % of the final grade. Two reports will be delivered: the first during Halfway through the term and the second at the end. The individualized part of the assessment will be done through cross-evaluation, oral questions during presentations, and written exam questions.
- 2. Reports of practical tasks (Weight: 10 %).
- 3. Written evaluation tests: there will be two tests, each with a weighting of 20% of the final mark, one in the middle and one at the end of the term. Several short tests will also be undertaken, with a global weighting of 10%.

A grade of 4 points will be required for an activity to be considered passed. Failed activities can be made up on tje date of the final exam.

#### B) GLOBAL ASSESSMENT

A final examination is available for those students that for some reason could not follow the continuous evaluation assessment process. In this case the final examination will consist in a written test, and some additional questions related with the practical tasks and projects. The subject is assessed in a 0 to 10 points scale and it is considered "passed" if the final grade obtained is equal or greater than 5.

#### EXTRAORDINARY EXAM:

There is a scheduled date for a second call examination, for those students that either dropped out during the semester or failed. Prior the examination, a student can choose to follow the continuous assessment or the exam-only assessment. In the former selection, the grades obtained in the projects and practical tasks will be taken into account and the student will only answer to the written test. If the later, (exam-only assessment), the student will also have to answer a full examination as described before.

#### **END-OF-PROGRAM EXAM:**

The exam will consist of a written test. This final exam will be rated between 0 and 10 points. It includes all the topics of the course. To pass, at least five points are needed. No other activity is valued.

#### USE IF GENERATIVE ARTIFICIAL INTELLIGENCE

The use of generative artificial intelligence (GAI) is permitted in the academic activities of this subject. Its use must be carried out in an ethical, critical and responsible manner. In the case of using GAI, any output it provides must be critically evaluated, and any citations or references generated must be carefully checked. It is also necessary to declare the use of the used tools.
