Universida_{de}Vigo

Subject Guide 2019 / 2020

IDENTIFYIN	<u> </u>			
	cs: Linear algebra			
Subject	Mathematics:			
Code	Linear algebra 007G410V01102			
Study	(*)Grao en Enxeñaría			
programme	Aeroespacial			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Basic education	1st	1st
Teaching	#EnglishFriendly			
language	Spanish			
	Galician			
Department		'	,	
Coordinator	Garcia Martinez, Xabier			
Lecturers	Garcia Martinez, Xabier			
E-mail	xabier.garcia.martinez@uvigo.gal			
Web	http://faitic.uvigo.es			
General	This subject is part of Mathematics and it is taught in t	he first semester o	f the first course. T	The other subjects
description	of Mathematics are: Calculus I, in the first semester of			
	the first course. Competences of linear algebra are acc	quired, being a part	of them fundame	ntal for the other
	subjects of Mathematics.			
	The subject has the character of basic training. It prov field of the aeronautical engineering such as the calcu simulation. English Friendly subject: International students may re references in English, b) tutoring sessions in English, c	lation and manuface equest from the tea	ture of vehicles ar chers: a) materials	nd numerical

Competencies

Code

- A1 That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study
- Planning, documentation, project management, calculation and manufacturing in the field of aeronautical engineering (in accordance with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, propulsion systems, aerospace materials, airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.
- C1 Capability to solve mathematical problems that may arise in engineering. Aptitude to apply the knowledge about: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and partial derivatives; numerical methods; numerical algorithm; statistics and optimization.
- C32 Appropriate knowledge applied to engineering: methods of calculation and development of materials and defence systems; management of experimental techniques, equipment and measuring instruments; numerical simulation of the most significant physical-mathematical processes; inspection, quality control and fault detection techniques; their most appropriate methods and repair techniques.
- D1 Capability of analysis, organization and planification.
- D3 Capability of oral and written communication in native lenguage
- O4 Capability of autonomous learning and information management
- D5 Capability to solve problems and draw decisions
- D6 Capabiliity for interpersonal communication
- D8 Capabiliity for critical and self-critical reasoning

Expected results from this subject

Training and Learning Results

Capacity to apply the main concepts, technical and numerical methods of linear algebra to other branches of mathematics and engineering.	A1	B2	C1 C32	D1 D3 D4 D5 D6
				D8

Contents	
Topic	
BLOCK I	1. Real and complex numbers.
	2. Systems of linear equations.
BLOCK II	3. Vector spaces.
	4. Linear transformations and matrices.
BLOCK III	5. Euclidean vector spaces.
	6. Diagonalisation. Orthogonal transformations.
BLOCK IV	7. Numerical methods: resolution of systems of linear equations.
	Computation of eigenvalues.

Planning			
	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	1	2
Lecturing	13	17	30
Problem solving	29	37	66
Autonomous problem solving	5	20	25
Essay questions exam	2	10	12
Essay questions exam	2.5	12.5	15

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Introductory activities	Activities directed to take contact and gather information on the students, as well as to present the subject.
Lecturing	Exposition of the contents of the subject. It will be illustrated with numerous examples and applications.
Problem solving	Approach, analysis, resolution and debate of a problem or exercise related with the subject, given to illustrate and complete the explanation of each lesson.
Autonomous problem solving	It will be proposed exercises and problems that the students have to resolve in group by using collaborative learning as a integrated methodology.

Personalized assistance	
Methodologies	Description
Introductory activities	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Lecturing	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Problem solving	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Autonomous problem solving	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Tests	Description
Essay questions exam	Before the realisation of the exam, attention and resolution of doubts to the students in relation to the different activities of the matter.
Essay questions exam	Before the realisation of the exam, attention and resolution of doubts to the students in relation to the different activities of the matter.

Assessment		
Description	Qualification	Training and
		Learning Results

Autonomous problem solving	Resolution of a collection of exercises where it will be employed collaborative learning.	20	A1	B2	C1 C32	D1 D3 D4 D5 D6 D8
Essay questions exam	Partial exam that takes in the corresponding contents to the master sessions and the resolution of problems of the thematic blocks I and II. It consists of two parts: *One of short questions of theoretical-practical character(20%). *Another one of problems/exercises (80%). Length: 2 hours	40	A1	B2	C1 C32	D3 D4 D5 D8
Essay questions exam	Long answer tests and development Partial exam that takes in the corresponding contents to the master sessions and the resolution of problems of the thematic block III. It consists of two parts: *One of short questions of theoretical-practical character(20%). *Another one of problems/exercises (80%). Length: 2.5 hours	40	A1	B2	C1 C32	D3 D4 D5 D8

Other comments on the Evaluation

CRITERIA OF EVALUATION FOR THE FIRST CERTIFICATED QUALIFICATION

- If a student does not carry out any of the deliveries of exercises or does not present any of the exams, they will be assigned a qualification of 0 points.
- **Minimum requirements to pass the subject:** P1: qualification of the first partial exam (out of 10); P2: qualification of the second partial exam (out of 10); E: qualification of problems resolution (out of 10)

• In case of not fulfilling the minimum requirements to pass the subject, the certificated qualification will be:

$$min(4,(P1 + P2)/2)$$

• In case to fulfil the minimum requirements to pass the subject, the certificated qualification will be:

$$max ((P1 + P2)/2, 0.8 \times (P1 + P2)/2 + 0.2 \times E)$$

CRITERIA OF EVALUATION FOR THE SECOND CERTIFICATED QUALIFICATION and non-assistant students

Proof of long answer and development:

Description: Exam with two parts: one theoretical-practical and another one in which they will solve exercises. This exam will be about the contents related to the master sessions and to the resolution of problems.

Qualification: E: resolution of problems during the semester (out of 10); P: exam (out of 10)

The qualification of the students will be calculate by the following formula:

DATES OF EVALUATION

The calendar of exams approved officially by the Xunta de Centro of the EEAE is published in the webpage http://aero.uvigo.es/gl/docencia/exames
