Contents			
Торіс			
Subject I: Introduction and axioms.	Load, current, electrical potential, energy and electrical power, law of Ohm, law of Joule and laws of Kirchoff. Ideal elements: Sources, resistance, coil, condenser and transformer.		
	Real elements: Sources, resistance, coil and condenser.		
Subject II: Continuos current curcuits.	Analysis of electrical circuits of continuous current. Association of elements in series and parallel, star and triangle.		
Subject III: Alternating current circuits: single- phase.	Characteristic values of the sine functions. Concept of phasor. Behaviour of the elements in alternating current. Combinations of elements. Powers: complex, apparent, active, reactive. Theorem of Boucherot.		
Subject IV: Alternating current circuits: three- phases	Values of line and phase. Reduction to the equivalent single-phase circuit.		
Subject V: Electrical machines.	Transformers: constitution, operation in empty and in load, equivalent circuit, time index. Asynchronous machines: constitution, generation of the rotating field, in no-load operation and in load, equivalent circuit, characteristic curves,		
Subject VI: Electrical installations.	maneuverss. Introduction to the electrical power systems. Low-voltage electrical installations.Constitutive elements. Workload Estimate. Introduction to the installation calculation

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	The teacher will present the contents of the subject in large group classes. Themes will be exposed with the help of presentation and detailed explanations on the blackboard. Student will handle bibliographic sources, looking for information not provided in class to encourage the autonomous learning.
Autonomous problem solving	It is highly recommended that the student try to solve on their own exercises and questions of the subject proposed by the teachers.
Problem solving	Problems and standard exercises will be exposed and solved in the classroom classes as a guide for the students.
Laboratory practical	Practical assemblies corresponding to the contents seen in the classroom will be made in the laboratory, or complementary aspects not treated in the theoretical classes will be treated.

Personalized assistance			
Methodologies	Description		
Lecturing	The professor will personally attend the doubts and queries of the students.		
Problem solving	The professor will personally attend the doubts and queries of the students.		
Autonomous problem solving	The student will be able to attend tutorials to resolve any question related to the proposed problems.		
Laboratory practical	The professor will personally attend the doubts and queries of the students.		
Tests	Description		
Report of practices, practicum and external practices	The student will be able to attend tutorials to resolve any question related to the report of practices.		

	Description		Qualification Training a			
					ng Re	
Report of practices, practicum and external practices	The fulfillment of the practices and the resolution of a questionnaire regarding the assembly, results obtained and interpretation of the same, will be valued positively. The fulfillment of each practice and presentation of the internship report will value between 0 and 10 points. For that it is ssential to attend the practice the day and time set at the beginning of the course. There will be no recovery of practices. The evaluation of the set of practices is the arithmetic mean of the obtained scores. Not attending a practice is associated with a score of zero points in practice, regardless of whether the student submits the corresponding report. The deadline for the presentation of each practice will be established once it has been made. The planned practices are as follows: Practice 1: Laboratory Safety Standards.		A3		C17	
	Practice 2: Direct Current. Practice 3: Alternating Current. Practice 4: Electrical Machines.					
Essay questions	Expected learning outcomes: RA1-RA2-RA3 There will be a general examination with two sections, one corresponding	35	<u>م</u>	R 1	C17	כח
exam	to the contents of circuit theory and the other corresponding to machines and electrical installations, which may include both theoretical and application exercises. Each section will be valued from 0 to 10 points. The final qualification of this examination will be calculated using the arithmetic mean of both sections, although a minimum of a 3 in each of the parts will be required to overcome the matter. At the request of the students and with the approval of the Direction, a partial examination corresponding to the Theory of Circuits part (Topics I to IV of the section of Contents), might take place out of the usual matter hours. To pass this partial exam, the grade obtained will be equal or higher than 5 points out of 10, and they will have two options to introduce themselves to final exam: - Only the section of Contents). In this case the partial exam qualification will be retained. - Doing the complete exam (two sections), if wanting to improve the grade in the first section. In this case, the score will correspond to the obtained in each of the sections of the complete examination, not keeping the partial exam qualification. In case the partial examination is not carried out or the student does not pass it, directly apply paragraphs 1 and 2 of this same section (examination general). Expected learning outcomes: RA1-RA2-RA3		Α4			D4 D5
Essay questions exam	(*)- Segundo examen: el día del examen final, correspondiente a los contenidos de máquinas e instalaciones eléctricas (Parte II). Se valorará de 0 a 10 puntos. Resultados de aprendizaje esperados: RA1-RA2-RA3	35	A3 A4	B1	C17	D2 D4 D5
Essay	(*)El estudiante deberá realizar un trabajo a lo largo del curso sobre "Instalaciones Eléctricas". Resultados de aprendizaje esperados: RA1-RA2-RA3	10	A3	B1	C17	D2 D4 D5
