A6 CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context.

engineering and the other on project management, which are interrelated since the development or

The subject of Systems Engineering and ICT Project Management has two aspects. The first focuses on systems

modification of a new or existing system is a project in itself. In both parts, a theoretical introduction and the

- CB7 That students know how to apply the acquired knowledge and their ability to solve problems in new or poorly understood environments within broader (or multidisciplinary) contexts related to their area of study.
- CB8 That students are able to integrate knowledge and face the complexity of formulating judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
- CB9 That students know how to communicate their conclusions and the knowledge and ultimate reasons that support them to a specialized and unspecialized public in a clear and unambiguous way.
- A10 CB10 That students possess the learning skills that allow them to continue studying in a way that will be largely selfdirected or autonomous.
- CG2 Integrate and apply the knowledge acquired, and possess the ability to solve problems in new or imprecisely defined environments, including multidisciplinary contexts related to their field of study.
- CG4 Being a professional committed to quality, deadlines and the adequacy of solutions, not only in the exercise of the profession but also in the social field, including a commitment to economic, ethical and environmental sustainability.
- CG5 Critically evaluate the structure and validity of reasoning, analyzing, interpreting, and questioning the foundations of ideas, actions, and judgments of oneself or others, before accepting them as valid.
- CE4 Strategically plan, direct, coordinate and technically and economically manage projects in the field of ICTs and information security, applying the current normative and regulatory framework in the technical-economic-legal fields.
- CT3 Incorporate criteria of sustainability and environmental commitment into professional practice. Acquire skills in the equitable, responsible and efficient use of resources.
- CT4 Oral and written communication skills.
- CT5 Autonomous learning and work.

Expected results from this subject			
Expected results from this subject	Training and		
	Learning Results		

LO1: Understand the basic concepts of systems engineering and its structure. Ability to apply them to practical examples and cases.		A6 A7
		B2 C4 D5
LO2: Basic knowledge of the main processes, act management.	ivities and documents of project/programme	A6 C4
LO3: Knowledge of the main standards and meth	odologies for project management, in particular PMBOK	A6
and PRINCE2. Introductory knowledge of AGILE m		C4
LO4: Basic and introductory knowledge of the mo	est commonly used IT tools in project management.	A6 C4
		D5
LO5: Theoretical and practical knowledge of the f	undamentals of project planning, execution and control.	A6
		A10
		B4 C4
		D5
	ning, monitoring and control of a project in the field of	A7
CIS, ICT and SEGINFO.		A8
		B2
		B4 C4
		D3
		D4
LO7: Knowledge of the fundamentals of risk man	agement and risk analysis in the framework of a project.	
		A8
		B2 C4
		D5
LO8: Ability to develop actions and make decision	ns that allow a satisfactory response to project risks.	A7
,	, , , , ,	A8
		A9
		B2

Methodologies	
	Description
Autonomous problem solving	Activity in which students analyse and solve problems and/or exercises related to the subject in an autonomous way.
Previous studies	Research, reading, documentation work and/or autonomously carrying out any other activity that the student considers necessary to enable him/her to acquire knowledge and skills related to the subject. This is usually carried out prior to the classes, laboratory practices and/or assessment tests.
Lecturing	Lecturer's presentation of the contents of the subject being studied, theoretical bases and/or guidelines for a project or exercise to be carried out by the student.
Problem solving	Activity in which problems and/or exercises related to the subject are formulated. The student must develop the appropriate and correct solutions through the exercise of routines, application of formulas or algorithms, application of transformation procedures of the available information and interpretation of the results.
Practices through ICT	Activities for applying knowledge in a given context and acquiring basic and procedural skills in relation to the subject, through the use of ICT.
Presentation	Presentation by the students, individually or in groups, of a topic related to the contents of the subject or of the results of a work, exercise, project, etc.
Seminars	Activity focused on working on a specific topic, which allows to deepen or complement the contents of the subject.
Discussion Forum	An activity carried out in a virtual environment in which a variety of current topics related to the academic and/or professional sphere are debated.

Personalized assista	nce
Methodologies	Description
Discussion Forum	It will be carried out through the use of telematics systems. Students who wish to do so will be able to ask questions to the teacher in forums or by e-mail. They will also be able to arrange individual tutorials with the lecturer, which will take place via videoconference.
Autonomous problem solving	It will be carried out through the use of telematics systems. Students who wish to do so will be able to ask questions to the lecturer in forums or by e-mail. They will also be able to arrange individual tutorials with the teacher, which will take place via videoconference.
Lecturing	It will be carried out through the use of telematics systems. Students who wish to do so will be able to ask questions to the teacher in forums or by e-mail. They will also be able to arrange individual tutorials with the lecturer, which will take place via videoconference. While the use of telematics student support is still possible, face-to-face tutoring mechanisms will also be used during this phase.
Problem solving	It will be carried out through the use of telematics systems. Students who wish to do so will be able to ask questions to the lecturer in forums or by e-mail. They will also be able to arrange individual tutorials with the teacher, which will take place via videoconference. While the use of telematics student support is still possible, face-to-face tutoring mechanisms will also be used during this phase.
Practices through ICT	While the use of telematics student support is still possible, face-to-face tutoring mechanisms will also be used during this phase.
Presentation	While the use of telematics student support is still possible, face-to-face tutoring mechanisms will also be used during this phase.
Seminars	While the use of telematics student support is still possible, face-to-face tutoring mechanisms will also be used during this phase.

Assessment					
	Description	Qualification		ainin Learı Resı	_
Practices through ICT	Activities involving the application of knowledge in a given context and the acquisition of basic and procedural skills in relation to the subject, through the use of ICT. They make it possible to assess the student's knowledge and skills. There will be three deliverable activities (AE1, AE2 and AE3) that will be assessed during the distance phase: AE1 and AE2 will cover topics 2, 3, 4 and 5 while AE3 will cover topic 6 of the subject.		A6 A7	B2 B4	C4 D3 D5
Presentation	Presentation by the students, individually or in groups, of a topic related to the contents of the subject or of the results of a work, exercise, project, etc. A presentation (P) will be given and assessed during the face-to-face phase: activity P will cover topics 1, 2 and 4 of the subject. Knowledge, skills and attitudes can be assessed by means the presentation.		A9 A10		C4 D4 D5
Discussion Forum	An activity carried out in a virtual environment in which a variety of current topics related to the academic and/or professional sphere are debated. It assesses the skills, knowledge and, to a lesser extent, attitudes of the student. A discussion or debate activity (D) will be carried out in a virtual environment and will be assessed during the distance phase: activity D will cover topic 1 of the subject.	10	A8	B5	C4 D5
Objective questions exa	Test that assesses knowledge and includes closed questions with different manswer alternatives (true or false, multiple choice, item matching, etc.).  There will be a written test (PE) at the end of the face-to-face phase, in which al the topics and contents of the subject will be evaluated (including the contents of the distance and face-to-face phases).		A6	B2	C4 D4 D5
Essay	A text or document on a topic which must be written according to established rules of style and length. It allows the assessment of the student's skills, knowledge and, to a lesser extent, attitudes.  A report (T) will be produced and assessed during the distance learning phase: the T activity covers topics 1, 4 and 5 of the subject.		A9 A10		C4 D4 D5

### Other comments on the Evaluation

If we call the average mark for continuous assessment MED\_CON, which is calculated as follows:

 $MED_CON = 0.2* (AE1 + AE2 + AE3)/3 + 0.1* D + 0.1*T + 0.2*P + 0.4*PE$ 

It will be necessary to obtain at least 50% of the grade to pass the subject. If the subject is not passed in the ordinary call, there will be a second opportunity to pass it in the extraordinary call, which will be held in distance mode on the dates established for this purpose by the Master's Academic Committee.

The evaluation process in this second call would be carried out by means of a single written test for 100% of the grade, being necessary to obtain at least 50% of the grade to pass the subject.

#### **ACADEMIC INTEGRITY:**

Students are expected to show adequate ethical behaviour, committing to act honestly. Based on article 42.1 of the *Regulation on the evaluation, qualification and quality of teaching and the student learning process of the University of Vigo*, any violation of academic integrity in the assessment process, as well as the cooperation in it will result in the assignment of a failing grade to the student (zero) for the entire course in the corresponding assessment opportunity, regardless of the percentage of importance that the test in question had in the overall continuous assessment and independently of other disciplinary actions that may be applied.

In the case of any difference between the Galician/Spanish/English guides related to the evaluation, the Spanish guide will always prevail.
