General	According to its academical de				
description	joint appendages and phylum slits, endostile or thyroid gland		l skeleton (notoch	orda), segmente	ed muscles, pharyngeal

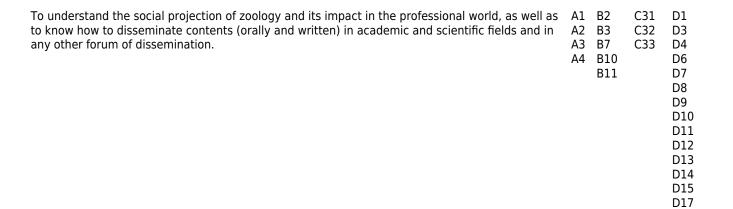

Competencies

Code

- A1 Students should prove understanding and knowledge in this study field that starts in the Secundary Education and with a level that, even though it is supported in advanced books, also includes some aspects that involve knowledge from the vanguard of the study field.
- A2 Students should know how to apply their knowledge to their work or vocation in a professional way. They also should have the competences that are usually proved through the elaboration and defence of arguments and the resolution of problems within their study field.
- A3 Students should prove ability for information-gathering and interpret important data (usually within their study field) to judge relevant social, scientific or ethical topics.
- A4 Students should able to communicate information, ideas, issues and solutions to all audiences (specialist and unskilled audience).
- B2 Ability of reading and analizing scientific papers and having critical assessment skills to understand data collection, deducing the main idea from the least relevant ones and basing on the correponding conclusions.
- B3 Acquisition of general knowledge about the basic subjects of biology, both at theory and experimental level, without dismissing a higher specialization in subjects that are oriented to a concrete professional area.
- B4 Ability in handling experimental tools, both scientific and computer technology equipment that support the search for solutions to problems related to the basic knowledge of biology and with those of a concrete labour context.
- B5 Understanding of the levels of organization of living beings from a structural (molecular, cellular and organic) and functional point of view by observing their relations with the environment and other organisms, as well as their appearances in situations of environmental alteration.
- B7 Collection of information about issues of biologic interest, analysis and emission of critical opinions and reason them including the reflection about social and/or ethical aspects related to the issue.
- B10 Development of analytic and abstraction skills, the intuition and the logical and rigorous thought through the study of biology and its uses.
- B11 Ability to communicate in detail and clearly: knowledge, methodology, ideas, issues and solutions to all audiences (not only qualified but unskilled in Biology).
- B12 Ability to identify their own educational necessities in the biology field and in concrete labour areas and to organize their learning with a high grade of autonomy in any context.
- C1 Obtaining, managing, preserving, describing and identifying current biological organisms and fossils.

- C2 Recognizing different levels of Living systems organization. Performing phylogenetic analysis and identifying evidence of evolution. Analysing and interpreting the behaviour of living beings C10 Analysing and assessing the adaptation of living beings to the environment. C11 Sampling, characterizing, managing, preserving and restoring Populations, Communities and Ecosystems.
- C12 Cataloguing, mapping, assessing, preserving, restoring and managing natural and biological resources.
- C23 Developing, managing and using biological control techniques.
- C24 Designing biological process models.
- C31 Knowing and handling technical and scientific apparatus.
- C32 Knowing and handling basic or specific key concepts and terminology
- C33 Understanding the social projection of Biology.
- D1 Development of capacity of analysis and synthesis
- Acquisition of the organization and planning capacity for tasks and time
- Development of oral and writting communication abilities
- Acquisition of foreign language knowledge related to the study field
- D6 Research and interpreting of information from different sources
- Resolution of issues and decision making in an effective way
- Development of the ability of independent learning
- D9 Ability to work in collaboration or creating groups with an interdisciplinary character
- D10 Development of the critical thinking
- D11 Adquisition of an ethical agreement with the society and the profession
- D12 Respectful behaviour to diversity and multiculturalism
- D13 Sensitivity for environmental issues
- D14 Adquisition of abilities in the interpersonal relationships
- D15 Development of creativity, initiative and enterpreneurial spirit
- D17 Development of the self-criticism ability

Learning outcomes				
Expected results from this subject	Training and Learning Results		earning	
To know the origin and evolution of animals: the body plans, the position of the distinct groups along the evolutionary tree and the rules of the zoological nomenclature.	A1 A2 A3 A4	B5	C1 C2 C32	D1 D6 D10
To know the biodiversity and the organisms' abilities to adapt to their environment: species identification (use of dichotomous keys) and analysis of animal behaviour	A1 A2 A3 A4	B2 B4 B5	C1 C9 C10 C11 C31	D6 D7 D12 D13
To know and compare the anatomy and physiology of the different animal groups: morphological adaptations, strategies of capture and food foraging, developmental biology and biological cycles	A1 A2 A3 A4	B2 B5	C1 C10	D1 D6 D9 D10
To apply the acquired knowledge in zoology to manipulate and analyse specimens and samples of biological origin, with the aim of cataloging, evaluating, designing and interpreting biological models; to elaborate management measures for species control and for the dessign of adequate plans that could ensure their conservation and the restoration of their habitats.	A1 A2 A3 A4	В7	C1 C11 C12 C23 C24 C31	D1 D2 D6 D7 D8 D9 D10 D11 D13
To apply knowledge and techniques in those areas specialised in producing and exploitating resources of animal origin; awareness of animal welfare and ethical commitment when studying and using animals	A1 A2 A3 A4	B2 B3 B4 B7 B12	C9 C10 C24	D2 D9 D10 D11 D13 D15

Contents	
Topic	
Presentation: General organisation of the course	Organisation of the course. Introduction and justification of the
-	phylogenetic scheme adopted.
I. Panarthropoda	Phylogenetic considerations of Panarthropoda
	Phylum Tardigrada. External and internal morphology.
	Phylum Onychophora. External and internal morphology.
II. Phylum Arthropoda	General characteristics
	Subphylum Chelicerata
	Suphylum Miriapoda
	Subphylum Crustacea
	Subphylum Hexapoda
III. Phylum Chordata	Exclusive characteristics
	Subphylum Cefalochordata
	Subphylum Urochordata
	Subphylum Vertebrata
IV. Phylum Chordata: Craneata	Subphylum Vertebrata (Vertebrates except Tetrapods)
	Class Mixini
	Class Petromizontidae
	Class Chondrichtyes
	Class Actinopterygii
	Class Sarcopteriygii
IV. Phylum Chordata: Craneata	Subphylum Vertebrata (Tetrapod Vertebrates)
	Class Amphybia
	Class non Avian Reptiles
	Class Aves
	Class Mammals
PRACTICE PROGRAMME	Practice I. Morphological study of Arthropods I. External morphology of
	different groups.
	Practice II. Morphological study of Arthropods II. Internal morphology of a
	model arthropod.
	Practice III. Morphological study of Vertebrates I. External and internal
	morphology of a teleostean fish.
	Practice IV. Morphological study of Vertebrates II. Diversity of Amphibian
	and Reptiles.
	Practice V. Morphological study of Vertebrates III. Diversity of Birds and
	Mammals.
	Practice VI. Field trip. Observation in situ of different groups of arthropods
	and chordates.

Planning			
	Class hours	Hours outside the classroom	Total hours
Master Session	28	42	70
Laboratory practises	15	30	45
Case studies / analysis of situations	0	16	16
Seminars	3	0	3
Short answer tests	2	14	16

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description

Master Session	Theorical contents related by the professor in the classroom. "Teaching starts in the classroom and ends in the books".
Laboratory practises	Practical activitiies at the laboratory which complement the topics addressed during the theorical
	lessons.
Case studies / analysis	Resolution of practical cases and questionaires using the online TEMA platform. These are intended
of situations	to help in retaining concepts but above all to acquire the transversal skills included in the sylllabus.
Seminars	They can be used to solve any problems arisen during the course. Execution of complementary activities of the theoretical-practical aspects of the course. The competences of foreign language
	(English) will be worked out.

Personalized attention

Methodologies Description

Seminars

The tutorials for groups of several students do not allow a personalized follow-up but they are a good mechanism to consult any doubts and enable the teacher to share their difficulties. In a system in which the burden of learning falls on the student, close follow-up is essential if learning and study are to be continuous and progressive. In addition, personalized tutorials (Tuesday and Thursday 10:00-13:00) will also be used to monitor the development of the subject and resolution of any guestions that could arise.

Assessment					
	Description	Qualification		ing a	
			Learnir	ng Res	sults
Laboratory practises	Attending the practical lessons and performing the written examination of the practical contents. The student attitude and the active participation in the laboratory work would be positively evaluated.		A1 B2 A2 B4 A3 B5 A4	C1 C2 C11 C31	
Case studies / analysis of situations	Activities posted to the onlineTEMA platform: resolution of theoretical-practical exercises related to each of the thematic units. They are intended to evaluate the transversal competences acquired by the students. Each of them allows the teacher to evaluate the student efforts during the course. Each of the activities will be evaluated on a scale from 1 to 10 that will then be averaged to obtain the final score.		A1 B12 A2 A3 A4	C9 C23 C24 C33	D3
Seminars	Assistance and resolution of a case study. The attitude and active participation in the debates is especially valued.		A1 B7 A2 B10 A3 B11 A4		D2
Short answer tests	Written exam where the student has to answer several questions related to the the theorical aspects of the subject. The aim is to evaluate the extent of the acquisition of the contents of the course.		A1 B2 A2 B3 A3 B5 A4 B11	C2 C9 C10 C12 C32 C33	DIT

Other comments on the Evaluation

The writtem exams dealing with the theorical aspects of the course will be performed on the official dates (June and July) published in the examination calendar which can be found on the faculty website: http://bioloxia.uvigo.es/docs/docencia/examenes/exames_grado_2017-18.pdf

The written tests about the practical aspects will be performed at the end of each practical class. Those marks obtained during the continous evaluation (i.e. attending the seminars and practical lessons, on-line activities and questionaries in TEMA) can be conserved until the second and extraordinary examination dates of the current academic year and therefore, they CANNOT be re-taken; in contrast, the written exams could be taken again on each of the official examination dates

established in the academic calendar.

The final mark is calculated by the addition of the parts (after calculating the percentages assigned) as long as each part of the total evaluation (theory, practice, seminars and activities) had been passed (minimum 5.0).

The students are considered [absent] if they do not attend any of the written exams occurring on the two official calls (first and second call of the current academic year).

Cheating and plagiarism in any of the different activities of the evaluation could result in failing the activity and/or the entire course.
