description	joint appendages and phylum Ch		I skeleton (notocho	orda), segmen	ted muscles, pharyngeal
	slits, endostile or thyroid gland a	nd postanal tail.			

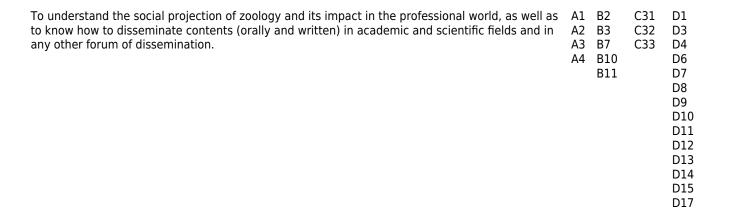

Competencies

Code

- A1 Students should prove understanding and knowledge in this study field that starts in the Secundary Education and with a level that, even though it is supported in advanced books, also includes some aspects that involve knowledge from the vanguard of the study field.
- A2 Students should know how to apply their knowledge to their work or vocation in a professional way. They also should have the competences that are usually proved through the elaboration and defence of arguments and the resolution of problems within their study field.
- A3 Students should prove ability for information-gathering and interpret important data (usually within their study field) to judge relevant social, scientific or ethical topics.
- A4 Students should able to communicate information, ideas, issues and solutions to all audiences (specialist and unskilled audience).
- B2 Ability of reading and analizing scientific papers and having critical assessment skills to understand data collection, deducing the main idea from the least relevant ones and basing on the correponding conclusions.
- B3 Acquisition of general knowledge about the basic subjects of biology, both at theory and experimental level, without dismissing a higher specialization in subjects that are oriented to a concrete professional area.
- B4 Ability in handling experimental tools, both scientific and computer technology equipment that support the search for solutions to problems related to the basic knowledge of biology and with those of a concrete labour context.
- B5 Understanding of the levels of organization of living beings from a structural (molecular, cellular and organic) and functional point of view by observing their relations with the environment and other organisms, as well as their appearances in situations of environmental alteration.
- B7 Collection of information about issues of biologic interest, analysis and emission of critical opinions and reason them including the reflection about social and/or ethical aspects related to the issue.

- B10 Development of analytic and abstraction skills, the intuition and the logical and rigorous thought through the study of biology and its uses.
- B11 Ability to communicate in detail and clearly: knowledge, methodology, ideas, issues and solutions to all audiences (not only qualified but unskilled in Biology).
- B12 Ability to identify their own educational necessities in the biology field and in concrete labour areas and to organize their learning with a high grade of autonomy in any context.
- C1 Obtaining, managing, preserving, describing and identifying current biological organisms and fossils.
- C2 Recognizing different levels of Living systems organization. Performing phylogenetic analysis and identifying evidence of evolution.
- C9 Analysing and interpreting the behaviour of living beings
- C10 Analysing and assessing the adaptation of living beings to the environment.
- C11 Sampling, characterizing, managing, preserving and restoring Populations, Communities and Ecosystems.
- C12 Cataloguing, mapping, assessing, preserving, restoring and managing natural and biological resources.
- C23 Developing, managing and using biological control techniques.
- C24 Designing biological process models.
- C31 Knowing and handling technical and scientific apparatus.
- C32 Knowing and handling basic or specific key concepts and terminology
- C33 Understanding the social projection of Biology.
- D1 Development of capacity of analysis and synthesis
- D2 Acquisition of the organization and planning capacity for tasks and time
- D3 Development of oral and writting communication abilities
- D4 Acquisition of foreign language knowledge related to the study field
- D6 Research and interpreting of information from different sources
- D7 Resolution of issues and decision making in an effective way
- Development of the ability of independent learning
- D9 Ability to work in collaboration or creating groups with an interdisciplinary character
- D10 Development of the critical thinking
- D11 Adquisition of an ethical agreement with the society and the profession
- D12 Respectful behaviour to diversity and multiculturalism
- D13 Sensitivity for environmental issues
- D14 Adquisition of abilities in the interpersonal relationships
- D15 Development of creativity, initiative and enterpreneurial spirit
- D17 Development of the self-criticism ability

Learning outcomes				
Expected results from this subject	Training and Learning Results			
To know the origin and evolution of animals: the body plans, the position of the distinct groups along the evolutionary tree and the rules of the zoological nomenclature.	A1 A2 A3 A4	B5	C1 C2 C32	D1 D6 D10
To know the biodiversity and the organisms' abilities to adapt to their environment: species identification (use of dichotomous keys) and analysis of animal behaviour	A1 A2 A3 A4	B2 B4 B5	C1 C9 C10 C11 C31	D6 D7 D12 D13
To know and compare the anatomy and physiology of the different animal groups: morphological adaptations, strategies of capture and food foraging, developmental biology and biological cycles	A1 A2 A3 A4	B2 B5	C1 C10	D1 D6 D9 D10
To apply the acquired knowledge in zoology to manipulate and analyse specimens and samples of biological origin, with the aim of cataloging, evaluating, designing and interpreting biological models; to elaborate management measures for species control and for the dessign of adequate plans that could ensure their conservation and the restoration of their habitats.	A1 A2 A3 A4	B7	C1 C11 C12 C23 C24 C31	D1 D2 D6 D7 D8 D9 D10 D11 D13 D15
To apply knowledge and techniques in those areas specialised in producing and exploitating resources of animal origin; awareness of animal welfare and ethical commitment when studying and using animals	A1 A2 A3 A4	B2 B3 B4 B7 B12	C9 C10 C24	D2 D9 D10 D11 D13 D15

Contents	
Topic	
Presentation: General organisation of the course	Organisation of the course. Introduction and justification of the phylogenetic scheme adopted.
I. Panarthropoda	Phylogenetic considerations of Panarthropoda
	Phylum Tardigrada. External and internal morphology.
	Phylum Onychophora. External and internal morphology.
II. Phylum Arthropoda	General characteristics
	Subphylum Chelicerata
	Suphylum Miriapoda
	Subphylum Crustacea
	Subphylum Hexapoda
III. Phylum Chordata	Exclusive characteristics
	Subphylum Cefalochordata
	Subphylum Urochordata
	Subphylum Vertebrata
IV. Phylum Chordata: Craneata	Subphylum Vertebrata (Vertebrates except Tetrapods)
	Class Mixini
	Class Petromizontidae
	Class Chondrichtyes
	Class Actinopterygii
	Class Sarcopteriygii
IV. Phylum Chordata: Craneata	Subphylum Vertebrata (Tetrapod Vertebrates)
	Class Amphybia
	Class non Avian Reptiles
	Class Aves Class Mammals
Laboratory Eversions	
Laboratory Exercises	I. Morphological study of Arthropods I. External morphology of different
	groups. II. Morphological study of Arthropods II. Internal morphology of a model
	arthropod.
	III. Morphological study of Vertebrates I. External and internal morphology
	of a teleostean fish.
	IV. Morphological study of Vertebrates II. Diversity of Amphibian and
	Reptiles.
	V. Morphological study of Vertebrates III. Diversity of Birds and Mammals.
	VI. Field trip. Observation in situ of different groups of arthropods and
	chordates.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	28	42	70
Laboratory practical	15	30	45
Case studies	0	16	16
Seminars	3	0	3
Problem and/or exercise solving	2	14	16

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Descri	ption

Lecturing	Theorical contents related by the professor in the classroom. "Teaching starts in the classroom and ends in the books".
Laboratory practical	Laboratory exercises to provide a practical approach to the topics addressed during the theorical
	lessons.
Case studies	Resolution of practical cases and questionaires using the online TEMA platform. These are intended
	to help in retaining concepts but above all to acquire the transversal skills included in the sylllabus.
Seminars	They can be used to solve any problems that could arise during the course. They will include complementary activities addressing some of the theoretical-practical aspects. Tasks aiming at
	acquiring academic English skills will be implemented.

Personalized assis	Personalized assistance				
Methodologies	Description				
Lecturing	Group tutorials do not allow a personalized follow-up but they are a good mechanism to consult any doubts and enable the teacher to share the students' difficulties. In a system in which the burden of learning falls on the student, close follow-up is essential if learning and study are to be continuous and progressive. Therefore, individual tutorials (Monday, Tuesday and Thursday 15:30-17:30) will also be used to monitor the development of the subject and resolution of any questions that may arise. Student tutorials could also be done vritually (email, videoconference) by mutual agreement between the lecturer and the student.				
Laboratory practical Tutorials (Monday, Tuesday and Thursday 15:30-17:30) will be used to solve any questions arise.					
Seminars	Tutorials (Monday and Tuesday 09:00-12:00) will be used to solve any questions that may arise.				
Case studies	Tutorials (Monday, Tuesday and Thursday 15:30-17:30) will be used to solve any questions that may arise.				

Assessment	Description	Qualification	Trair	ina	nd
	Description	Qualification	Learnii	ning a	
Laboratory practical	Attending the practical lessons and performing the written examination of the practical contents. The student attitude and the active participation in the laboratory work would be positively evaluated.	20	A1 B2 A2 B4 A3 B5 A4	C1 C2 C11 C31	Suits
Case studies	Activities posted to the onlineTEMA platform: resolution of theoretical-practical exercises related to each of the thematic units. They are intended to evaluate the transversal competences acquired by the students. Each of them allows the teacher to evaluate the student efforts during the course. Each of the activities will be evaluated on a scale from 1 to 10 that will then be averaged to obtain the final score.	10	A1 B12 A2 A3 A4		D3
Seminars	Assistance and resolution of a case study. The attitude and active participation in the debates is especially valued.	10	A1 B7 A2 B10 A3 B11 A4		D2
Problem and/o exercise solving	or Written exam where the student has to answer several questions related to the the theorical aspects of the subject. The aim is to evaluate the extent of the acquisition of the contents of the course.	60	A1 B2 A2 B3 A3 B5 A4 B11	C2 C9 C10 C12 C32 C33	D1/

Other comments on the Evaluation

The written exams of the theoretical aspects of the course will be performed on the official examination dates (June and July) published in the examination calendar which can be found on the faculty website: http://bioloxia.uvigo.es/en/teaching/exams

The written exams of the practical aspects of the subject will be done at the end of each of the practical classes. The points obtained during the continuous evaluation (seminars, laboratory exercises, on-line activities in TEMA) can be conserved until the second and extraordinary examination dates of the current academic year and therefore, they CANNOT be re-taken; however, the written exam (theoretical part) could be taken again on the official examination dates established in the academic calendar.

The final grade will be obtained as the sum of the parts (after calculating the percentages assigned), **as long as each part of the total evaluation (theory, practice, seminars and activities) had been passed (minimum 5.0)**. In addition, the teacher may propose extra activities in order to raise the average grade that will be announced throughout the semester and therefore, it is the student's obligation to stay informed throughout the period.

A student will receive a grade of "not presented" (NP) when he/she has not attended the final written exam that will be held in the two official calls (first and second call) and does not perform any of the activities included in the continuous evaluation procedure (seminars, laboratory exercises, on-line activities in TEMA).

Those students retaking the course must repeat all those failed parts that are considered in the evaluation process and consult with the professors which parts approved in previous years they are willing to keep and upon which conditions.

Cheating and plagiarism in any of the different activities of the evaluation could result in failing the activity and/or the entire course.

Recommendations

Subjects that continue the syllabus

Zoology 1: Non-arthropod invertebrates/V02G030V01305

Subjects that are recommended to be taken simultaneously

Animal and plant histology and cytology II/V02G030V01403 Genetics I/V02G030V01404

Subjects that it is recommended to have taken before

Biology: Basic field and remote sensing techniques/V02G030V01202

Zoology 1: Non-arthropod invertebrates/V02G030V01305

Contingency plan

Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

Face-to-face learning

No changes in the teaching methodologies originally planned in the syllabus

Mixed learning (face-to-face combined with virtual teaching):

Face-to-face learning will be adopted for the laboratory exercises and seminars

Virtual teaching:

Theoretical concepts ("lectures: theoretical contents related by the professor in the classroom"): They are taught by

LMS (learning management system o LMS) such as Moodle or FAITIC.
☐ Laboratory exercises ("experimental activity complementing the theoretical classes"): If they cannot be done face-to-face in the laboratory, they will be given by videoconference and by uploading supporting material in the LMS.
☐ Seminars (☐complementary activities to theoretical-practical training☐): An individualized exercise that would be made available to students through LMS and also be submitted through the LMS.
=== PERSONALISED ATTENTION === [] Theoretical concepts and laboratory exercises: group tutorials by videoconference according to the new time schedule proposed by the Faculty and also individual ones by previous appointment agreed between students and lecturers via email
☐ Seminars: Individual tutorials to help the work by email.
=== EVALUATION === Theoretical concepts: Given the uncertainty of these moments, two possibilities are envisaged: - Assessment in face-to-face mode (if the situation allows it): written examination (60% of the total final grade) as it was originally proposed in the syllabus Evaluation in non-face-to-face mode (in case the face-to-face modality is not re-established): the mechanisms approved by the university in due course will be used to address this exceptional situation and the assigned percentage will be reduced (40%). If this is the case, the percentages assigned to the laboratory exercises and the training activities will be increased to reach the final total grade of 100%.
☐ Laboratory exercises (20%): Attendance and written exam the end of each practical session. In the case of virtual learning instead of an individual face-to-face exam at the end of each one, students will be evaluated by means of a questionnaire of an exercise posted through LMS that will also be answered individually.
$\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
☐ Case studies/Activities through LMS platform (10%): Resolution of theoretical and practical exercises aimed at evaluating transversal competences. They are done through LMS and answered individually.
List of activities and their percentages according to the current syllabus/changes in the assessment percentages in the ever of not being able to perform face-to-face tests:
☐ Theoretical contents (60%/40%) a) Face-to-face final written exam if possible 60% b) Final exam through LMS platforms 40% ☐ Laboratory exercises (20%/30%) a) Questionnaire at the end of each practical session 20% b) Questionnaire or exercise posted through FAITIC that is answered individually 30% ☐ Seminars (10%/10%) a) Individual assay posted through LMS 10% b) Individual assay posted through LMS 10% ☐ Case studies (10%/20%) a) Resolution of practical cases and questionnaires 10% b) Resolution of practical cases and questionnaires 20%
July (second examination): The scores obtained during the continuous evaluation (seminars, laboratory exercises, on-line activities in LMS) will be only retained until the second and extraordinary examination dates of the current academic year and therefore, they CANNOT be re-taken; however, the written exam (theoretical concepts) could be taken again on the official examination dates established in the academic calendar. The percentage assigned to this final written exam will be

subjected to the possibility of whether this can be done face-to-face or virtually as stipulated in the table above.

videoconference according to the schedule established in the academic calendar and by leaving supporting material in the
