### Other comments on the Evaluation

Assesment:

The final qualification is determined by adding the points obtained on the final exam (80%) and those obtained during the continuous assessment (20%).

The points achieved by continuous assessment (20%) will be valid in the first and second calls.

None of the qualifications obtained in the final exam of the the first call will be saved for the second call.

#### Ethical commitment:

The student is expected to present an adequate ethical behavior. In the event that an unethical behavior is detected (copying, plagiarism, use of unauthorized electronic devices, for example), it will be considered that the student does not meet the necessary requirements for passing the subject. Depending on the type of unethical behavior detected, it could be concluded that the student has not reached the competencies of the course.

IMPORTANT NOTE: this is the english translation of the subject guide. In the event of any conflict between the English and Spanish versions, the Spanish version shall prevail.

#### Recommendations

#### **Other comments**

In order to take this course it is highly recommended that students have completed courses about thermodynamics, heat transfer and thermal engineering and technology.

In particular, a good background in psychrometrics and psychrometrics processes is strongly recommended.

IMPORTANT NOTE: this is the english translation of the subject guide. In the event of any conflict between the English and Spanish versions, the Spanish version shall prevail.
