General description This course has a multidisciplinary nature in order to acquire the necessary skills to tackle integral projects in which they have to design and plan different types of facilities that are safe, efficient and compliant with standards and marked in legislation.

The aim is to provide students of structured content in the following sections:

- Introduction. The diversity of facilities in the field of Industrial Engineering.
- Complete design of installations in the field of Industrial Engineering.
- Electrical installation and lighting.
- Efficient Facilities: Energy saving and efficiency,
- Design of air conditioning and ventilation
- Design facilities fluids
- Intelligent Buildings: Design of communications, automation and intelligent facilities.
- Secure Infrastructure: Industrial Security. Security system design.
- Regulations and Legislation.

To achieve this objective, the different areas of the ISS proposed multidisciplinary work related to the powers conferred on this matter.

Due to the multidisciplinary nature of this field, and the use and management of national and international regulations and legislation is necessary to have an adequate level of English. Therefore requirement is set to demonstrate a level of English B1 or equivalent.

This subject is developed and fully evaluated in English.

Competencies

| | |
|------|--|
| Code | |
| A2 | That the students can apply their knowledge and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study. |
| A3 | That students are able to integrate knowledge and handle complexity and formulate judgments based on information that was incomplete or limited, include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments. |
| C1 | CET1. Project, calculate and design products, processes, facilities and plants. |
| C5 | CET5. Technically and economically manage projects, installations, plants, companies and technology centers. |
| C7 | CET7. Apply their knowledge and solve problems in new or unfamiliar environments within broader contexts and multidisciplinary environments. |
| C8 | CET8. Being able to integrate knowledge and handle complexity and formulate judgments based on information that was incomplete or limited, include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments. |
| C27 | CGS8. Ability to manage research, development and technological innovation. |

| | |
|-----|--|
| C31 | CIPC4. Knowledge and skills to plan and design intelligent electrical and fluid, lighting, air conditioning and ventilation, energy saving and, acoustic efficiency facilities, communications, automation and buildings and security installations. |
| D1 | ABET-a. An ability to apply knowledge of mathematics, science, and engineering. |
| D3 | ABET-c. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. |
| D4 | ABET-d. An ability to function on multidisciplinary teams. |
| D7 | ABET-g. An ability to communicate effectively. |
| D11 | ABET-k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |

Learning outcomes

| Expected results from this subject | Training and Learning Results |
|---|---|
| English preparation and presentation of multidisciplinary works related to the powers of this matter, and the use and management of national and international regulations and legislation. | A2 A3 C1 C5 C7 C8 C27 C31 D1 D3 D4 D7 D11 |
| Acquire the necessary knowledge to address comprehensive projects that have to design and plan different types of facilities that are safe, efficient and compliant with standards and marked in legislation. | A2 A3 C1 C5 C7 C8 C27 C31 D1 D3 D4 D7 D11 |

Contents

| Topic | |
|---|-------------------------------------|
| Design and optimization of red mud neutralization process through CO2 absorption. | I work similar type to the proposed |
| Automation of an industrial stacker crane and warehouse prototype | I work similar type to the proposed |
| Lighting and energy efficiency in metal halide lamps | I work similar type to the proposed |
| Implementation of a Product Lifecycle Management (PLM) system for educational use | I work similar type to the proposed |
| Design and calculation of a pilot plant to obtain biogas by slurry fermentation | I work similar type to the proposed |
| Implementation of a position control system based on an air blower | I work similar type to the proposed |
| Electrical installation design of a business park | I work similar type to the proposed |

Planning

| | Class hours | Hours outside the classroom | Total hours |
|--|-------------|-----------------------------|-------------|
| Introductory activities | 7 | 14 | 21 |
| Projects | 20 | 40 | 60 |
| Case studies / analysis of situations | 20 | 40 | 60 |
| Case studies / analysis of situations | 2 | 4 | 6 |
| Practical tests, real task execution and / or simulated. | 1 | 2 | 3 |

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies | |
|---------------------------------------|--|
| | Description |
| Introductory activities | Presentation of the means and description of the teams |
| Projects | Work in team to describe the system |
| Case studies / analysis of situations | Study, analysis and/or development of the system |

| Personalized attention | |
|--|--|
| Methodologies | Description |
| Case studies / analysis of situations | The professor will attend personally the doubts and queries of the students. |
| Introductory activities | The professor will attend personally the doubts and queries of the students. |
| Projects | The professor will attend personally the doubts and queries of the students. |
| Tests | Description |
| Case studies / analysis of situations | The professor will attend personally the doubts and queries of the students. |
| Practical tests, real task execution and / or simulated. | The professor will attend personally the doubts and queries of the students. |

| Assessment | | | | | |
|--|--|---------------|-------------------------------|------------------------------------|-----------------------------|
| | Description | Qualification | Training and Learning Results | | |
| Case studies / analysis of situations | Exhibition in English by part of student of the project done. | 70 | A2 A3 | C1 C5 C7 C8 C27 C31 | D1 D3 D4 D7 D11 |
| Practical tests, real task execution and / or simulated. | The projects selected will be able to opt to a second phase of realization in which it will have of additional material to carry out a practical implementation of everything or some part of the project presented. | 30 | | | |

Other comments on the Evaluation

- In the 2^a announcement of the same course the student will have to examine of the no surpassed parts in the 1^a announcement. - Will have to surpass the first part (oral Exhibition) to approve the matter. - Ethical commitment: it expects that the present student a suitable ethical behaviour. In case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, and others), will consider that the student does not gather the necessary requirements to surpass the matter. In this case the global qualification in the present academic course will be of suspense (0.0). - It will not allow the utilization of any electronic device during the proofs of evaluation except permission expresses. The fact to enter an unauthorised electronic device in the classroom of examination will be considered reason for not passing the subject in the present academic course and the global qualification will be of suspense (0.0).
