General	This course has a multidisciplinary nature in order to acquire the	e necessar	y skills to tackl	e integral projects in
description				
	The aim is to provide students of structured content in the follow Introduction. The diversity of facilities in the field of Industrial			
	Complete design of installations in the field of Industrial Engin	eering.		
	$\hfill \square$ Electrical installation and lighting.			
	☐ Efficient Facilities: Energy saving and efficiency,			
	Design of air conditioning and ventilation			
	☐ Design facilities fluids			
	☐ Intelligent Buildings: Design of communications, automation a		ent facilities.	
	Secure Infrastructure: Industrial Security. Security system desRegulations and Legislation.	ign.		
	To achieve this objective, the different areas of the EEI proposed conferred on this matter.	d multidisc	iplinary work re	elated to the powers
	Due to the multidisciplinary nature of this field, and the use and regulations and legislation is necessary to have an adequate levelomonstrate a level of English B1 or equivalent. This subject is developed and fully evaluated in English.			

Skills

Code

A2 That the students can apply their knowledge and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study.

- A3 That students are able to integrate knowledge and handle complexity and formulate judgments based on information that was incomplete or limited, include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments.
- C1 CET1. Project, calculate and design products, processes, facilities and plants.
- C5 CET5. Technically and economically manage projects, installations, plants, companies and technology centers.
- C7 CET7. Apply their knowledge and solve problems in new or unfamiliar environments within broader contexts and multidisciplinary environments.
- C8 CET8. Being able to integrate knowledge and handle complexity and formulate judgments based on information that was incomplete or limited, include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments.
- C27 CGS8. Ability to manage research, development and technological innovation.
- C31 CIPC4. Knowledge and skills to plan and design intelligent electrical and fluid, lighting, air conditioning and ventilation, energy saving and, acoustic efficiency facilities, communications, automation and buildings and security installations.
- D1 ABET-a. An ability to apply knowledge of mathematics, science, and engineering.
- D3 ABET-c. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- D4 ABET-d. An ability to function on multidisciplinary teams.
- D7 ABET-g. An ability to communicate effectively.
- D11 ABET-k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Learning outcomes	
Expected results from this subject	Training and Learning Results
English preparation and presentation of multidisciplinary works related to the powers of this matter, and	A2
the use and management of national and international regulations and legislation.	A3
	C1
	C5
	C7
	C8
	C27
	C31
	D1
	D3
	D4
	D7
	D11
Acquire the necessary knowledge to address comprehensive projects that have to design and plan	A2
different types of facilities that are safe, efficient and compliant with standards and marked in legislation.	A3
	C1
	C5
	C7
	C8
	C27

Other comments on the Evaluation

- Information about the tests «Case studies» and «Oral exam»:

The work carried out by the students must be included in a report. All the students in each group will prepare and participate in an oral presentation of the work (in English) before a jury.

After the oral presentation of each group, the members of the jury will ask questions to the students of that group. Next, students in the audience (who are themselves enrolled in the subject) will have the opportunity to ask questions to the group.

At the end of the session, each student must have asked at least one question to students from other group. The pertinence of the questions and the answers will be assessed by the jury.

- -In an eventual resit (June/July) the student will take an examination of the part not passed in the 1st exam call (January or May/June). It is compulsory to get a pass in the oral presentation to pass the subject.
- Ethical commitment: Students are expected to behave in a suitable ethical manner. If a non-ethical behaviour is detected (e.g., copy, plagiarism, use of unauthorized electronic devices, and others), it will be considered that the student does not fulfill the necessary requirements to pass the course. In that case, the global grade in the present academic year will be a "fail" (0.0).
- -The use of any electronic devices during the evaluation session is forbidden unless explicit permission is given by the

lecturer. The mere fact of introducing an unauthorised device in the classroom is reason enough to fail the subject. In that case, the global grade in the present academic year will be "fail" (0.0).
