Presentation	10	0	10
Problem solving	6	0	6
Case studies	8	0	8
Problem and/or exercise solving	0	21	21
Case studies	0	30	30

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Presentation	Lectures about the topics.
	Applications.
	Study Cases.
Problem solving	Discussion of exercises
Case studies	Discussion of practical cases

Personalized assistance			
Tests	Description		
Problem and/or exercise solving	Individual discussions for the resolution of problems and/or exercises proposed.		
Case studies	Individual discussions to solve the doubts related to the works and projects proposed.		

Assessment			
	Description	Qualification	Training and Learning Results
Problem and/or exercise solving	Resolution of exercises and problems	35	C14 D9
Case studies	Resolution of a realistic cases proposed	. 65	C14 D9

## Other comments on the Evaluation

The evaluation will be done according to the scores in three working blocks: # calculation with standards (35%) # case-study: project (35%) # case-study: FEM (30%). For all of the blocks, the student must achieve at least 35% of the partial score to pass the evaluation.

The continuous evaluation will be done considering both the regular exercises and the case-studies to hand in. If any student gives up (officially) the continuous evaluation, the evaluation will be done with the exam and the case-studies handed in. The distribution of the evaluation will be of 35% for the exam and 65% for the case-studies.

It is expected an adequate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

#### **Basic Bibliography**

VVAA, Shigley's mechanical engineering design, McGraw-Hill,

## **Complementary Bibliography**

Norton, R., **Diseño de Máquinas**, Pearson, 2000

Mott, R.L., **Diseño de elementos de máquinas**, Pearson, 2006

Ansys, Ansys, documentation,

## Recommendations

#### Subjects that continue the syllabus

Advanced Mechanical Engineering Design/V04M141V01203

## Contingency plan

#### **Description**

# === EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering

safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

- \* Teaching methodologies maintained Planned as it is
- \* Teaching methodologies modified Not planned modifications
- \* Non-attendance mechanisms for student attention (tutoring) Tutoring will be continued by online meetings
- \* Modifications (if applicable) of the contents Not planned modifications
- \* Additional bibliography to facilitate self-learning Not changed
- \* Other modifications

=== ADAPTATION OF THE TESTS ===

No changes planned.

\* Additional Information
