General	We review, in the first place, the physical foundation	s of optical fibre tecl	nnology: prop	agation in fibre and both
description	active and passive optical devices. Next, we analyse	different advanced	systems for fi	bre transmission and
•	optical networks, and we discuss techniques to evalu	late and design then	n.	

# Competencies

Code

- B1 CG1 Ability to project, calculate and design products, processes and facilities in telecommunication engineering areas.
- CG4 Capacity for mathematical modeling, calculation and simulation in technological centers and engineering companies, particularly in research, development and innovation tasks in all areas related to Telecommunication Engineering and associated multidisciplinary fields.
- B8 CG8 Ability to apply acquired knowledge and to solve problems in new or unfamiliar environments within broader and multidiscipline contexts, being able to integrate knowledge.
- C13 CE13 Ability to apply advanced knowledge of photonics, optoelectronics and high-frequency electronics.

Learning outcomes	
Expected results from this subject	Training and Learning Results
1. Functional knowledge of the essential photonic devices for optical communications: LEDs and lasers,	B4
photodetectors, optical modulators, couplers, circulators, AWG, fibre amplifiers, semiconductor optical amplifiers, optical filters, single-mode fibres, multi-mode fibres and multicore fibres.	C13
2. Knowledge of the noise models used to characterise the optical transmitter subsystems, optical	B4
amplifiers and receivers, and capacity to calculate its impact in terms of the signal to noise ratio and error probability.	r C13
3. Knowledge of the basic formats of digital transmission by optical fibre, and of analog transmission in	B4
systems fibre-radio.	C13
4. Knowledge of some advanced systems for fibre transmission: new modulation formats, coherent	B4
systems, non-linear systems and dispersion management.	B8
	C13
5. Knowledge of the specific technologies of optical networks WDM and DWDM, and options to design	B1
them.	B4
	C13
6. Knowledge of the optical network topologies for long distance transmission, metropolitan and regional	B1
networks, and access optical networks.	B4
	C13
7. Knowledge of security techniques to protect optical networks.	B4
	B8
	C13
8. Knowledge of free-space optical systems and visible light communications.	B4
	B8
	C13

Topic  1. Introduction to optical communication systems 1.1. Reasons for optical transmission  2. Foundations of optical communications  2.1. Non-monochromatic propagation in linear optical fibres.  2.2. Basic active devices: lasers, LEDs, photodetectors, optical mod and doped fibre amplifiers.  2.3. Basic passive devices: couplers, splitters and filters.  3. Advanced optical devices  3.1. Active devices: SOA, fibre lasers and Raman amplifiers.  3.2. Passive devices: AWG, gratings, circulators, plastic fibres and multicore fibres.  4. Non-linear effects in fibres and dispersion management  4.2. Stimulated Raman Scattering  4.3. Dispersion management  5. Digital systems ETDM  5.1. Introduction  5.2. ETDM systems with optical amplifiers	
2.1. Non-monochromatic propagation in linear optical fibres.  2.2. Basic active devices: lasers, LEDs, photodetectors, optical mod and doped fibre amplifiers.  2.3. Basic passive devices: couplers, splitters and filters.  3. Advanced optical devices  3.1. Active devices: SOA, fibre lasers and Raman amplifiers.  3.2. Passive devices: AWG, gratings, circulators, plastic fibres and multicore fibres.  4. Non-linear effects in fibres and dispersion management  4.2. Stimulated Raman Scattering  4.3. Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	18	54	72
Laboratory practical	6	6	12
Case studies	2	12	14
Essay questions exam	2	12	14
Problem and/or exercise solving	1	5	6
Case studies	1	6	7

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies			
	Description		
Lecturing	The professor introduces the main contents of each chapter to the students. Note, however, that these lectures do not cover all the contents of each subject. For that reason, the students have to review the supplementary notes provided in class. It is also expected that the students review the concepts introduced in the classroom and expand on their contents using the guide of each chapter, together with the recommended bibliography, as a reference.		
	Through this methodology the competencies CG1, CG4, CG8 and CE13 are developed.		
Laboratory practical	The lectures include some exercises in the lab involving different optical devices and optical communication systems. The students have to read the lab notes provided by the professor before the lab starts. At the beginning of each exercise the professor might request that the students summarise the main concepts related to the exercise. Any doubt can be solved using the office hours of the professor.		
	Through this methodology the competencies CG4, CG8 and CE13 are developed.		

It consists of activities that complement the master sessions and allow a better understanding of the theoretical concepts.

Through this methodology the competencies CG1, CG4, CG8 and CE13 are developed.

Methodologies	Description
Lecturing	The students can use the office hours of the professor to solve doubts related to the subject. The timetable of these office hours will be available at the beginning of the semester and is published on the website of the course.
Laboratory practica	The students can use the office hours of the professor to solve doubts related to the subject. The timetable of these office hours will be available at the beginning of the semester and is published or the website of the course.
Case studies	The students can use the office hours of the professor to solve doubts related to the subject. The timetable of these office hours will be available at the beginning of the semester and is published on the website of the course.

Assessment	Description	Oualification	Tra	ining and
	Description	Qualification	L	earning Results
Essay questions exam	At the end of the semester, the students will perform a final test that covers all the contents of the course.	30	B1 B4 B8	C13
Problem and/or exercise solving	After the last lab session, the student will perform a test (20%) about the exercises done in the lab. Moreover, before the beginning of chapter 5, the students will perform a test (20%) about the contents of the first 4 chapters of the course.	40	B4 B8	C13
Case studies	It evaluates the work realised by the student in the study of cases proposed in class.	30	B1 B4 B8	C13

## Other comments on the Evaluation

#### First call:

We will offer to the students two possible assessment systems: continuous assessment or exam-only assessment.

Each student has to decide on one of these two options by the third week of the course. In principle, the professor considers that the student decides continuous assessment unless the student explicitly indicates by written statement to the professor that he decides exam-only assessment at the end of the course.

#### Continuous assessment:

The continuous assessment comprises a series of tasks that the student has to realise along the course (70%), together with a long answer test (30%) that he/she performs at the end of the course. These tasks include (a) the completion of one short answer test about the lab (20%), which will take place after the last lab exercise, and one short answer test about the first four chapters of the subject (20%) that will take place before starting chapter 5, and (b) the assessment of the activities realised by the student related with the 'case studies' (30%) that has to be completed by the end of the course. The activities related to the 'case studies' could be performed in groups of students. In this case, the mark of the students in this task will be the mark of the group. All these tasks may not be retaken at another point in time. That is to say, if a student cannot fulfill them within the time stipulated by the professor, there is no possibility to do them afterwards. Also, they are only valid for the present academic year.

Those students who decide to opt for a continuous assessment will have to fulfill the following conditions in order to pass the course: (a) perform at least 2 out of the 3 lab exercises; (b) obtain, at least, 12 points out of 30 in the 'case studies'; (c) obtain, at least, 12 points out of 30 in the long answer test; and (d) obtain a minimum of 50 points in total (i.e., taking all the activities into account). The final mark of those students who do not fulfill these minimum requirements will be calculated as follows. It will be the minimum between: (i) the total number of points obtained by the student in all the activities of the course, and (ii) 40 points. That is to say, the maximum mark obtainable for these students is 40 points.

The choice of a continuous assessment necessarily implies that the student is counted as present at the final evaluation, independently of whether or not the student has performed the long answer test.

## Exam-only assessment:

In addition to the system of continuous assessment described above, the student can opt for a exam-only assessment. This exam-only assessment covers all the contents of the subject. The professor may demand the student to deliver some additional tasks, which will be notified by the fourth week of the course. These tasks have to be delivered on the day of the final exam. To pass the course the student will have to obtain, at least, 50 points out of 100 in the final exam together with the additional tasks.

#### Second call:

Those students who opted for a continuous assessment in the first call and fulfill the requirements (a) and (b) above, will be able, if they so wish, to keep the mark obtained in the tasks performed during the continuous assessment (70%). In such a case, they will only take a long answer test (30%). To pass the course, these students will have to obtain, at least, 12 points out of 30 in the long answer test, and obtain a minimum of 50 points in total.

Alternatively, these students can also opt for a exam-only assessment, which covers all the contents of the course. In this case, the students will have to inform the professor one month prior to the final exam. Otherwise, it will be understood that the student opts for a long answer test and to keep the mark obtained in the tasks performed during the continuous assessment.

The rest of students (i.e., those that opted for a system of continuous assessment in the first call and do not fulfil the requirements (a) and (b) above, and those students that opted for a exam-only assessment in the first call) will be evaluated by a exam-only assessment, which covers all the contents of the course.

In the case of choosing a exam-only assessment, the professor may demand the student to deliver some additional tasks, which will be notified to the student one month prior to the final exam. These tasks have to be delivered at the day of the final exam. To pass the course the student will have to obtain, at least, 50 points out of 100 in the final exam together with the additional tasks.

Plagiarism is regarded as serious dishonest behaviour. If any form of plagiarism is detected in any of the tests or exams, the final grade will be FAIL (0), and the incident will be reported to the corresponding academic authorities for prosecution.

### Recommendations

## Subjects that it is recommended to have taken before

Electronics and Photonics for Communications/V05M145V01202

## **Contingency plan**

## **Description**

In the case of online teaching, the planning will be as follows:

- Teaching of Group A: The contents will be the same as those corresponding to face-to-face teaching.
- Teaching of Group B: The hardware exercises in the lab will be replaced by detailed theoretical online explanations about them.
- Assessment: The assessment will be online. We will replace the short answer test about the lab with an oral test (10%), and the resolution of exercises (10%).
