Subject Guide 2015 / 2016

IDENTIFYIN	G DATA				
Electronic C	Communication Systems				
Subject	Electronic				
	Communication				
	Systems				
Code	V12G330V01922				
Study	(*)Grao en	,	,		
programme	Enxeñaría en				
	Electrónica				
	Industrial e				
	Automática				
Descriptors	ECTS Credits		Choose	Year	Quadmester
	6		Optional	4th	1st
Teaching	Spanish				
language					
Department					
Coordinator	Soto Campos, Enrique				
Lecturers	Soto Campos, Enrique				
E-mail	darzveidar@yahoo.com				
Web	http://faitic.uvigo.es				
General	The aim of this subject is to teacl	h the basis of the th	neory of communi	cations, in partic	ular of the digital
description	communications and of the elect	ronic systems used	l in them.		

Competencies

Code

- B3 CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
- B4 CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and the ability to communicate and transmit knowledge and skills in the scope of industrial engineering in the field of Industrial Electronic and Automation.
- C21 CE21 knowledge of the fundamentals and applications of digital electronics and microprocessors.
- D2 CT2 Problems resolution.
- D3 CT3 Oral and written proficiency in the own language.
- D9 CT9 Apply knowledge.
- D17 CT17 Working as a team.

Learning outcomes				
Expected results from this subject		Training and Learning		
		Res	ults	
Knowledge of basic communications theory.	В3	C21	D2	
			D3	
			D9	
Knowledge of the foundations of the digital communications.	B3	C21	D2	
			D3	
			D9	
Knowledge of the most common and important considerations of the digital communications	-	C21	D2	
processes.			D3	
			D9	
Knowledge of the hardware implementations of a digital communications system.	B4	C21	D2	
			D9	
			D17	
Understanding of how the general theory applies to communications buses for industrial applications.			D3	
			D9	
			D17	

Co	n	te	ts

1. Introduction to communications systems Elements of a communication system. Electromagnetic spectrum. Time and frequency domain. Noise and communications. 2. Introduction to digital communications systems Systems classification. Sampling. Quantification. PCM. 3. The ISO OSI standard Definitions. Justification. OSI Levels. 4. Physical layer: transmission media Wires and categories. Microwaves links. Satellite channels. Optical fibre. Definitions. Digital standards. Base band modulations. Classification. Clock recovery. Spectrum. AC coupling. Error protection. Trasparency.	Topic

16. Analog communications AM. FM. Television.	16. Analog communications	AM. FM. Television.

Planning			
	Class hours	Hours outside the classroom	Total hours
Master Session	21	31.5	52.5
Classroom work	4.5	18	22.5
Troubleshooting and / or exercises	5	7.5	12.5
Previous studies / activities	0	22.5	22.5
Autonomous troubleshooting and / or exercises	0	20	20
Laboratory practises	18	0	18
Short answer tests	2	0	2
			1. 6.1

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	Most important aspects of the subjetc will be explained, looking for the active participation of the student posing questions that has to resolve in class.
Classroom work	These assigments look for the student to apply the exposed basic theory in class to real systems and in this way understand this theory and how is put in practice. They will make it in groups to boost team work. They will be presented in class.
Troubleshooting and / or exercises	r The students will resolve in class with the help of the professor exercises of application of the theory.
Previous studies / activities	Preparatory work masterclass: the student has to read the subject previously to be able to pose any doubts that arise to the professor. Preparatory work resolution problems: the student has to at least have tried to resolve the problems proposed to understand better their resolution. Preparatory work laboratory: the student has to read and prepare the practice previously for his
Autonomous	correct undestanding.
Autonomous troubleshooting and / or exercises	With the aim of checking the success of the learning process, the student will have at his disposal bulletins of problems to resolve on their own.
Laboratory practises	Laboratory practices will be done on Promax EC-796 systems, trainers of digital communications, where they will see in practice digital communications systems.

Personalized attention		
Methodologies	Description	
Laboratory practises	The students will be able to access academic support through the office time of the professor and email.	
Master Session	The students will be able to access academic support through the office time of the professor and email.	

Classroom work	The students will be able to access academic support through the office time of the professor and email.
Troubleshooting and / or exercises	The students will be able to access academic support through the office time of the professor and email.
Tests	Description
Short answer tests	The students will be able to access academic support through the office time of the professor and email.

Assessment				
	Description	Qualification	Trainin Learning	_
Master Session	The participation in class with comments and questions will be valued.	5	B3 C21	D2 D3 D9
Classroom work	Presentation of the assignment: description of an applied communication system. The fulfillment of this task is a requirement to obtain a pass.	30	C21	D2 D3 D9 D17
Troubleshooting and / or exercises	The participation in class with the resolution of problems will be valued.	5	B4 C21	D2 D3 D9
Laboratory practises	The realization of all the tasks of each practice will be graded in function of their fulfillment. The evaluation criteria are: minimum attendance of an 80%, punctuality, previous preparation, fulfillment and results.	20	C21	D3 D9 D17
Short answer tests	This test will be performed on the date of the final exam. It is conceived to check the basic knowledge of the subject.	40	C21	D2 D3 D9

Other comments on the Evaluation

The student must obtain a minimum of 5 over 10 in each of the parts: laboratory practices, classroom work and short answer test, to obtain a pass qualification in the subject.

Optionally assignments can be done in English.

Students who waive the continuous assessment must pass a written test more extensive than that of the minimum knowledge applied to the rest.

It is expected that the student will have an adequate ethical behaviour. If a non-ethical behaviour is detected (copy, plagiarism, utilization of unauthorized electronic devices, for example), it will be considered that the student does not fulfill the necessary requirements to pass the subject. Depending of the kind of the non ethical behaviour detected, it could be concluded that the student has not fulfilled the competences B2, B3 and CT19.
