IDENTIFYIN	G DATA		
Chemistry:	Chemistry		
Subject	Chemistry:		
	Chemistry		
Code	V12G380V01205		
Study	Degree in		
programme	Mechanical		
	Engineering		
Descriptors	ECTS Credits	Choose	Year Quadmester
	6	Basic education	1st 2nd
Teaching	Spanish		
language	Galician		
3 3	English		
Department	Chemical Engineering		
•	Physical Chemistry		
	Inorganic Chemistry		
	Organic Chemistry		
Coordinator	Cruz Freire, José Manuel		
Lecturers	Alonso Gómez, José Lorenzo		
	Bolaño García, Sandra		
	Bravo Bernárdez, Jorge		
	Cruz Freire, José Manuel		
	Fernández Nóvoa, Alejandro		
	Graña Rodríguez, Ana María		
	Izquierdo Pazó, Milagros		
	Lorenzo Fernández, Paula		
	Moldes Menduíña, Ana Belén		
	Moldes Moreira, Diego		
	Nóvoa Rodríguez, Ramón		
	Peña Gallego, María de los Ángeles		
	Pérez Juste, Jorge		
	Prieto Jiménez, Inmaculada		
	Rey Losada, Francisco Jesús		
	Rodríguez Rodríguez, Ana María		
	Sanroman Braga, María Ángeles		
	Valencia Matarranz, Laura María		
	Yañez Diaz, Maria Remedios

General	This is a basic subject, common for all levels of th	ne industrial fields studies.	. At the end of the course the
description	students will have a basic knowledge about the p		
	inorganic chemistry, and its application to Industr		
	other areas of the studies.	3	
		,	

Competencies

Code

- B3 CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
- C4 CE4 Ability to understand and apply the basic knowledge of general chemistry, organic chemistry and inorganic chemistry, and their applications in engineering.
- D2 CT2 Problems resolution.
- D10 CT10 Self learning and work.
- D17 CT17 Working as a team.

Learning outcomes

	Res	sults		
1. Understand the need of a reference system to describe a movement. Understand the movement				
and his causes. Identify the different types of movements. Know how graph any observation to.				
1. Understand the need of a reference system to describe a movement. Understand the movement				
and his causes. Identify the different types of movements. Know how graph any observation to.				
1. Understand the need of a reference system to describe a movement. Understand the movement				
and his causes. Identify the different types of movements. Know how graph any observation to.				
1. Understand the need of a reference system to describe a movement. Understand the movement				
and his causes. Identify the different types of movements. Know how graph any observation to.				
1. Understand the need of a reference system to describe a movement. Understand the movement				
and his causes. Identify the different types of movements. Know how graph any observation to.				
Knowing the chemical bases of industrial technologies. Specifically, the student will gain basic B3	C4	D2		
knowledge of general, organic and inorganic chemistry and their applications in engineering. This		D10		
will allow the student to apply the basic concepts and fundamental laws of chemistry. Due to		D17		
theoretical-practical training, the student will be able to effectively carry out lab experiments and				
to solve basic chemistry exercises.				
The student will be able to comprise like the cinematic, the dynamics and the fluid mechanics are				
the foundation of the *hiomecánica				

Contents	
Topic	
Atomic theory and chemical bonding	1.1 Atomic theory: Particles of the atom: Electron, proton et neutron. Characteristics of the atom: Atomic number and Atomic mass. Isotopes. Stability of the nucleus: Radioactivity (natural and artificial). Evolution of the atomic theory. 1.2. Chemical bonding: Definition. Intramolecular bonding: Covalent bonding and ionic bonding.
	Polyatomic molecules: hybridization and delocalization of electrons. Intermolecular bonding: Types of intermolecular forces.
2. States of aggregation: Solids, gases, pure liquids and solutions	 2.1. Solid state: Introduction. Classification of solids: amorphous solids, molecular crystals and liquid crystals, Covalent crystals and ionic crystals. 2.2. Gaseous state: Characteristics of the gas phase. Ideal gases: Equation of state. Real gases: Equation of state. Properties of gases. 2.3. Liquid state: Characteristics of the liquid phase: physical properties (density, surface)
	tension, viscosity). Changes of state. Phase diagram. Solutions: colligative properties
3. Thermochemistry	 3.1. Heat of reaction: Definition of Enthalpy and Internal Energy. Enthalpy of reaction. Temperature Dependence of Enthalpy Changes. Enthalpy of formation. Determination of the reaction enthalpy: direct method. State Function and Hess's Law. 3.2. Entropy: Definition. Calculus. 3.3. Free energy: Definition. Calculus. The Criterion of Evolution.
4.Chemical equilibrium: in gas phase, acid-base-base, redox, solubility	(4.1. Chemical equilibrium: Concept of Equilibrium. Equilibrium Constant. Types of equilibrium. The Le Chatelier Principe. 4.2. Acid-base Equilibrium: Definition of acid and base. Autoionization of water. Ionic Product. Concept of pH and pOH. Strength of acids and bases: Polyprotic acids. Amphoters. pH calculation. Acid-base titration. Buffer solutions. 4.3. Redox equilibrium: Concept of oxidation, reduction, oxidising agent, reducing agent. Balance of redox reactions in acid and alkaline media. Redox titration. Electrochemical cells: basic concepts and redox potential. Thermodynamics of electrochemical reactions: Gibbs Energy and cell Potential. Nernst Equation. Faraday□s Laws. 4.4 Solubility equilibrium: Soluble salts: Hydrolysis. Sparingly soluble salts: solubility and solubility product. Factors affecting solubility. Fractional Precipitation. Complex Salts: Definition, properties, dissociation and importance.

5.3. Factors affecting the Reaction Rate. 6. Basic principles of Organic Chemistry 6.1. Pstructure of the organic formulation and functional groups: 6.1.1. 9Structure of the organic compounds: Alkanes, alkenes and alkynes. Aromatic Hydrocarbons. 6.1.2. Alkchols and phenols. 6.1.3. Ethers. 6.1.4. Aldehydes and ketones. 6.1.5. Esters. 6.1.6. Carboxylic acids and derivatives. 6.1.7. Amines and nitro-compounds. 7. Basic principles of Inorganic Chemistry. 7. Basic principles of Inorganic Chemistry. 7. Metallurgy and the Chemistry of Metals: Abundance of metals. Nature of the metallic bond, properties. Theory of the Conduction Band: conducting materials, semiconductors and superconductors. Metallurgical processes; iron and steel. 7.2. Non-metallic elements and their compounds: 6. General properties. Hydrogen. Carbon. Nitrogen and phosphorous. Oxygen and sulphur. Halogens. 8. Applied Electrochemistry 8. 1. Applications of the Nernst equation: Determination of pH, Equilibrium constant, solubility product. 8. 2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes. Electrolysis Cells. 8. 3. Industrial Processes of electrolysis: electrodensoition (electroplating), electrometallurgy, electrolysis chlorine[caustic soda. Fuel cells. 9. Corrosion and treatment of Surfaces 9. 1. Basic sprinciples of Corrosion: the corrosión cell. 9. 1. Escription of the Corrosion of Corrosion protection. Cathodic protection: sacrifical anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10. Furdemantals. 10. Furdemantals. 10. Furgine-based sensors: Biosensors. 10. Sensors for gases in solution. 10. Propology and function. 10. Sensors for gases in solution. 10. Propology and function. 10. Sensors for gases in solution. 10. Propology and function and voltammentic sensors. 10. Applications of sensors. 10. Applications of sensors. 10. Applications of sensors. 10. Propology and function and derivatives; methanol and derivatives. Petrochemistry 11. Physicochemic	5. Chemical kinetics	5.1. Basic Concepts:Reaction Rate. Reaction Order. Kinetic Constant. Rate Equation.5.2. Determination of the Rate Equation:Initial rate method. Integrated Rate Laws.
6.1.1. *Structure of the organic compounds: Alkanes, alkenes and alkynes. Aromatic Hydrocarbons. 6.1.2. Alcohols and phenols. 6.1.3. Ebers. 6.1.4. Aldehydes and ketones. 6.1.5. Esters. 6.1.5. Esters. 6.1.6. Esters. 6		
7.1. Metallurgy and the Chemistry of Metals: Abundance of metals. Nature of the metallic bond, properties. Theory of the Conduction Band: conducting materials, semiconductors and superconductors. Metallurgical processes: iron and steel. 7.2. Non-metallic elements and their compounds: General properties. Hydrogen. Carbon. Nitrogen and phosphorous. Oxygen and sulphur. Hallogens. 8. Applied Electrochemistry 8. Applied Electrochemistry 8. 1. Applications of the Nernst equation: Determination of pH, Equilibrium constant, solubility product. 8.2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes: Electrolysis cells. 8. 3. Industrial Processes of electrolysis: electrodeposition (electroplating), electrometallurgy, electrolysis chlorine[jaustic soda. Fuel cells. 9.1. Basic principles of Corrosion: the corrosión cell. 9.2. Corrosion of metals. 9.3. Corrosion of metals. 9.4. Types of Corrosion. 9.5. Protection against Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.8. Amperometric and voltammetric sensors. 10.9. Applications of sensors medicine, industry, environment. 11. Petroleum and derivatives. Petrochemistry 11.1. Physicochemical characteristics of patural gas. 11.4. Fractioning of oil. 11.5. Cracking of hydrocarbons. Reforming, isomerisation, oligomerisation, alkylation and esterification of hydrocarbons. 11.6. Petrochemical processes of BTX; olefins and derivatives; methanol and derivatives. 11.7. Treatment of sulphurous compounds and refining units. 12. Types of carbons and their constitution. 12.5. Hydrogenation of carbon. 12.5. Hydrogenation of carbon.	6. Basic principles of Organic Chemistry	 6.1.1. ^oStructure of the organic compounds: Alkanes, alkenes and alkynes. Aromatic Hydrocarbons. 6.1.2. Alcohols and phenols. 6.1.3. Ethers. 6.1.4. Aldehydes and ketones. 6.1.5. Esters. 6.1.6. Carboxylic acids and derivatives.
Abundance of metals. Nature of the metallic bond, properties. Theory of the Conduction Band: conducting materials, semiconductors and superconductors. Metallurgical processes: iron and steel. 7.2. Non-metallic elements and their compounds: General properties. Hydrogen. Carbon. Nitrogen and phosphorous. Oxygen and sulphur. Hallogens. 8. Applied Electrochemistry 8. 1. Applications of the Nernst equation: Determination of pH, Equilibrium constant, solubility product. 8. 2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes: Electrolysis Cells. 8. 3. Industrial Processes of electrolysis: electrodeposition (electroplating), electrometallurgy, electrolysis: chlorine[Caustic soda. Fuel cells. 9. Corrosion and treatment of Surfaces 9. 1. Basic principles of Corrosion: the corrosión cell. 9. Corrosion of metals. 9. Corrosion of metals. 9. Torosion: 9. Protection against Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10. Fundamentals. 10. Typology and function. 10. Conductivity Sensors. 10. A potentiometric Sensors. 10. For openations of sensors: 10. Sensors for gases in solution. 10. Fundamentals. 10. Electrodes. pH sensors. 10. Sensors for gases in solution. 10. Fundamentals appeared to the properties of the properti	7. Pacie principles of Inorganic Chemistry	
constant, solubility product. 8.2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes. Electrolysis Cells. 8.3. Industrial Processes of electrolysis: electrodeposition (electroplating), electronsolome and treatment of Surfaces 9.1. Basic principles of Corrosion: the corrosión cell. 9.2. Corrosion of metals. 9.3. Corrosion rate. 9.4. Types of Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.8. Amperometric and voltammetric sensors. 10.9. Applications of sensors: medicine, industry, environment. 11. Petroleum and derivatives. Petrochemistry 11. Physicochemical characteristics of petroleum (oil). 11.2. Physicochemical characteristics of natural gas. 11.3. Conditioning and uses of natural gas. 11.4. Fractioning of oil. 11.5. Cracking of hydrocarbons. Reforming, isomerisation, oligomerisation, alkylation and esterification of hydrocarbons. 11.6. Petrochemical processes of BTX; olefins and derivatives; methanol and derivatives. 11.7. Treatment of sulphurous compounds and refining units. 12. Types of carbons and their constitution. 12.3. Technological uses of carbon. 12.4. Pyrogenation of carbon. 12.5. Hyldrogenation of carbon. 12.5. Hyldrogenation of carbon.	7. Basic principles of morganic Chemistry.	Abundance of metals. Nature of the metallic bond, properties. Theory of the Conduction Band: conducting materials, semiconductors and superconductors. Metallurgical processes: iron and steel. 7.2. Non-metallic elements and their compounds: General properties. Hydrogen. Carbon. Nitrogen and phosphorous. Oxygen
constant, solubility product. 8.2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes. Electrolysis Cells. 8.3. Industrial Processes of electrolysis: electrodeposition (electroplating), electronsolumentallurgy, electrolysis: chorine[]caustic soda. Fuel cells. 9. Corrosion and treatment of Surfaces 9.1. Basic principles of Corrosion: the corrosión cell. 9.2. Corrosion of metals. 9.3. Corrosion rate. 9.4. Types of Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.8. Amperometric and voltammetric sensors. 10.9. Applications of sensors: medicine, industry, environment. 11. Petroleum and derivatives. Petrochemistry 11. Physicochemical characteristics of petroleum (oil). 11.2. Physicochemical characteristics of natural gas. 11.3. Conditioning and uses of natural gas. 11.4. Fractioning of oil. 11.5. Cracking of hydrocarbons. Reforming, isomerisation, oligomerisation, alkylation and esterification of hydrocarbons. 11.6. Petrochemical processes of BTX; olefins and derivatives; methanol and derivatives. 11.7. Treatment of sulphurous compounds and refining units. 12. Types of carbons and their constitution. 12.3. Technological uses of carbon. 12.4. Pyrogenation of carbon. 12.5. Hyidrogenation of carbon. 12.5. Hyidrogenation of carbon.	8. Applied Electrochemistry	
9.2. Corrosion of metals. 9.3. Corrosion rate. 9.4. Types of Corrosion. 9.5. Protection against Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.8. Amperometric and voltammetric sensors. 10.9. Applications of sensors medicine, industry, environment. 11. Petroleum and derivatives. Petrochemistry 11.1. Physicochemical characteristics of petroleum (oil). 11.2. Physicochemical characteristics of natural gas. 11.3. Conditioning and uses of natural gas. 11.4. Fractioning of oil. 11.5. Cracking of hydrocarbons. Reforming, isomerisation, oligomerisation, alkylation and esterification of hydrocarbons. 11.6. Petrochemical processes of BTX; olefins and derivatives; methanol and derivatives. 11.7. Treatment of sulphurous compounds and refining units. 12.1. Formation of carbon. 12.2. Types of carbons and their constitution. 12.3. Technological uses of carbon. 12.4. Pyrogenation of carbon. 12.5. Hyidrogenation of carbon.		constant, solubility product. 8.2. Electrochemical cells: types of cells. Concentration Cells. Electric Conductivity in electrolytes. Electrolysis Cells. 8.3. Industrial Processes of electrolysis: electrodeposition (electroplating),
9.3. Corrosion rate. 9.4. Types of Corrosion. 9.5. Protection against Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.8. Amperometric and voltammetric sensors. 10.9. Applications of sensors: medicine, industry, environment. 11. Petroleum and derivatives. Petrochemistry 11.1. Physicochemical characteristics of petroleum (oil). 11.2. Physicochemical characteristics of natural gas. 11.3. Conditioning and uses of natural gas. 11.4. Fractioning of oil. 11.5. Cracking of hydrocarbons. Reforming, isomerisation, oligomerisation, alkylation and esterification of hydrocarbons. 11.6. Petrochemical processes of BTX; olefins and derivatives; methanol and derivatives. 11.7. Treatment of sulphurous compounds and refining units. 12. Carbon: Carbochemistry 12. Types of carbons and their constitution. 12.3. Technological uses of carbon. 12.4. Pyrogenation of carbon. 12.5. Hyldrogenation of carbon.	9. Corrosion and treatment of Surfaces	
9.4. Types of Corrosion. 9.5. Protection against Corrosion: Design considerations for Corrosion protection. Cathodic protection: sacrificial anodes and impressed current. Organic Coatings. Metallic coatings. 10. Electrochemical sensors 10.1. Fundamentals. 10.2. Typology and function. 10.3. Conductivity Sensors. 10.4. Potentiometric Sensors. 10.5. Ion Selective electrodes. pH sensors. 10.6. Sensors for gases in solution. 10.7. Enzyme-based sensors: Biosensors. 10.9. Applications of sensors: medicine, industry, environment. 11. Petroleum and derivatives. Petrochemistry 11.1. Physicochemical characteristics of petroleum (oil). 11.2. Physicochemical characteristics of natural gas. 11.3. Conditioning and uses of natural gas. 11.4. Fractioning of oil. 11.5. Cracking of hydrocarbons. Reforming, isomerisation, oligomerisation, alkylation and esterification of hydrocarbons. 11.6. Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	30	45	75
Problem solving	7.5	12	19.5
Laboratory practices	10	7.5	17.5
Autonomous problem solving	0	25.5	25.5
Objective questions exam	1	0	1

Problem solving	3	0	3	
Practices report	1	7.5	8.5	

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Presentation by the faculty member of the theoretical content of the subject using audiovisual media.
Problem solving	Activity in which problems and/or exercises related to the subject will be formulated. Students should develop appropriate solutions by applying formulas or algorithms to manage the available information and interpret the results.
Laboratory practices	Activities of application of the theoretical background to specific situations, aimed to the acquisition of basic skills related to the subject. Will be developed in the laboratories or computer rooms of the center in which subject is given. Those rooms will be equipped with the necessary specialized equipment.
Autonomous problem solving	Activity in which the teacher formulates problems and/or exercises related to the subject, and the student must develop the analysis and resolution in an autonomous way.

Personalized attention		
Methodologies	Description	
Lecturing	Any doubt related with the contents given in the mater sessions will be clarified.	
Problem solving	Any doubt related with the problems resolved in the seminars of problems will be answered.	
Laboratory practice	s Any doubt related with the laboratory practices will be answered.	

Assessment			
	Description	Qualification	Training and Learning Results
Autonomous problem solving	Students must solve independently, and periodically submit problems or exercises formulated by the faculty member. The results and the procedure followed in the execution will be evaluated. According to current legislation, the final grade will be numeric and between 0 and 10.	10	B3 C4 D2 D10
Objective questions exam	The purpose of these tests, which will be carried out in the date of the official announcement of examinations, is to assess the level of theoretical knowledge acquired by students in classroom sessions. Written tests are multiple choices, multiple responses, in which students can achieve a numerical score between 0 and 10, according to current legislation.	40	B3 C4 D10
Problem solving	The evaluation of the knowledge gained by students in seminars will be through a written exam, in the official announcement of examinations, in which the student must solve 4 or 5 problems related to the subject under study. The exam will be graded according to the current legislation, with a numerical final grade between 0 and 10.	40	B3 C4 D2 D10
Practices report	After each laboratory session, the student should answer an oral question or prepare a detailed report including aspects such as objective and theoretical foundations, procedure followed, materials used, results and interpretation. The aspects considered in the evaluation are the content of the report, the understanding of the work done, the ability of summarising, quality of presentation, and the personal contribution. The final score, between 0 and 10, will be the average of the marks obtained in the various reports made and/or writing or oral test that could be done for each practice.	10	C4 D17

Other comments on the Evaluation

The final exam, consisting of two different parts, a test-type quiz for theory content and a set of exercises, will be considered for the final score weighting only when they were rated greater than or equal to 4. Although the average score could be equal or greater than 5, if the qualification of any of the parts of the final exam be lower than 4, the final score will be the lowest mark obtained in the final exam (which is the one that does not permit to calculate the average mark). The attendance to any lab session or any seminar test means that the student is being evaluated and therefore a qualification of \square not presented \square is no longer possible.

The marks of continuous evaluation (seminars test and lab experiments) and the marks of final exam higher than 5 (test quiz or exercises) obtained in the first call will be kept for the second call.

Those students that obtain officially the renunciation to the continuous evaluation will be evaluated by the final exam, to be held in the official date for the two calls. The final qualification will consist of a 50% of exercises and a 50% of theory (test-type) exam. A rate equal to or greater than 4 in both parts is necessary in order to pass the exam.

Ethical commitment:

The student is expected to present an adequate ethical behavior. If an unethical behavior is detected (copying, plagiarism, unauthorized use of electronic devices, and others) it is considered that the student does not meet the requirements for passing the subject. In this case, the final grade in the current academic year will be FAIL (0.0 points).

The use of electronic devices during the assessment tests will be not permitted. Introducing an unauthorized electronic device into the examination room, will be considered as a FAIL (0.0 points) in the current academic year.

Recommendations

Subjects that it is recommended to have taken before

(*)Física: Física I/V12G350V01102

(*)Matemáticas: Álxebra e estatística/V12G350V01103

(*)Matemáticas: Cálculo I/V12G350V01104

Other comments

It is recommended that students have taken and passed the subject of "Chemistry" in second baccalaureate or, alternatively, passed a specific test of access to the Degree.
