| General description | <p>With this subject intends to give to the student a basic knowledge in Marine Zoology, through the study of the different filos that integrate the marine fauna.</p> <p>It will study, in each case, the general plan of organisation, the external morphology, the internal anatomy, the reproduction and the embryonic development and the ranking. Likewise they will include notions envelope his vital activity, habitat and distribution.</p> <p>International students may request from the teachers:</p> <p>a) resources and bibliographic references in English, b) mentoring sessions in English, c) exams and assessments in English.</p> |           |      |            |

## Training and Learning Results

|      |                                                                                                                                                                                                                                                                           |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Code |                                                                                                                                                                                                                                                                           |
| A2   | Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study |
| A3   | Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues                                                                        |
| A4   | Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences                                                                                                                                                       |
| A5   | Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy                                                                                                                           |
| B1   | Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.                                                                                                            |
| B2   | Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.                                                                         |
| B4   | Manage, process and interpret the data and information obtained both in the field and in the laboratory.                                                                                                                                                                  |
| C1   | know at a general level the fundamental principles of sciences: Mathematics, Physics, Chemistry, Biology and Geology.                                                                                                                                                     |
| C9   | Acquire basic knowledge about the structural and functional organization and the evolution of marine organisms.                                                                                                                                                           |
| C10  | Know the biological diversity and functioning of marine ecosystems.                                                                                                                                                                                                       |
| D1   | Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.                                                                                                                                               |
| D2   | Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.                                                                                                                                                     |

|---------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LESSON 1: INTRODUCTION                                                                            | Definition and objectives of the subject.<br>General characteristics of the metazoa: definition and models of organisation                                                                                                                                                                                                                                                              |
| LESSON 2: PHYLUM PORIFERA. PHYLUM PLACOZOA.                                                       | PORIFERA: general characteristics, cell types and skeleton. Types of organisation. Reproduction and development. Systematic summary.<br>PLACOZOA: Form and function.                                                                                                                                                                                                                    |
| LESSON 3: PHYLUM CNIDARIA                                                                         | General characteristics. Polymorphism: The polyp and the medusa. Cell types. Reproduction. Systematic summary. Hydrozoa, Scyphozoa, Staurozoa, Cubozoa and Anthozoa: form and function.                                                                                                                                                                                                 |
| LESSON 4: PHYLUM CTENOPHORA                                                                       | General characteristics. (Cephalopod organisation) Form and function. Reproduction. Systematic summary                                                                                                                                                                                                                                                                                  |
| LESSON 5: The BILATERIA: INTRODUCTION. PHYLUM ACOELOMORPHA, PLATYHELMINTHES, MESOZOA and NEMERTEA | Introduction to Bilateria.<br>Phylum Acoelomorpha: Form and function.<br>Phylum Platyhelminthes: General characteristics and classification; Turbellaria: form and function.<br>Phylum Mesozoa: General characteristics and classification.<br>Phylum Nemertea: General characteristics; (cephalopod organisation) form and function; reproduction and development; systematic summary. |
| LESSON 6. LOPHOTROCHOZOOA: THE LOWER PHYLA                                                        | Phyla Gnathostomulida, Rotifera, Acanthocephala, Cyclophora, Gastrotricha and Entoprocta: form and function.                                                                                                                                                                                                                                                                            |
| LESSON 7: The LOPHOPHORATES.                                                                      | General characteristics.<br>Phylum Bryozoa: Form and function; reproduction and development; systematic summary.<br>Phylum Brachiopoda: Form and function; reproduction and development; systematic summary.<br>Phylum Phoronida: Form and function; reproduction and development.                                                                                                      |
| LESSON 8: PHYLUM MOLLUSCA (I)                                                                     | General characteristics. (Cephalopod organisation) Form and function. Classification. Synopses of the lower class (Caudofoveata, Solenogaster, Polyplacophora, Monoplacophora and Scaphopoda)                                                                                                                                                                                           |
| LESSON 9: PHYLUM MOLLUSCA (II)                                                                    | Class Gastropoda: general characteristics; coiling; torsion; (cephalopod organisation) form and function; reproduction and development; systematic summary                                                                                                                                                                                                                              |
| LESSON 10: PHYLUM MOLLUSCA (III)                                                                  | Class Bivalvia: general characteristics; (cephalopod organisation): form and function; reproduction and development; systematic summary                                                                                                                                                                                                                                                 |
| LESSON 11: PHYLUM MOLLUSCA (IV)                                                                   | Class Cephalopoda: general characteristics; (cephalopod organisation): form and function; reproduction and development; systematic summary                                                                                                                                                                                                                                              |
| LESSON 12: PHYLUM ANNELIDA (I)                                                                    | General characteristics; metamerism; classification. Class Polychaeta: general characteristics; (cephalopod organisation): form and function; reproduction and development.                                                                                                                                                                                                             |

|                                                                                |                                                                                                                                                                                                                                                                |

| LESSON 13: PHYLUM ANNELIDA (II): The SIBOGLINIDAE. PHYLA ECHIURA and SIPUNCULA | The Siboglinidae: general characteristics; form and function; reproduction and development.<br>Phylum Echiura: Form and function.<br>Phylum Sipuncula: Form and function.                                                                                      |
| LESSON 14: ECDISOZOA: INTRODUCTION and LOWER PHYLA                             | Definition and systematic summary .<br>Phyla Nematoda, Kinorhyncha, Priapulida, Loricifera and Tardigrada: form and function.                                                                                                                                  |
| LESSON 15: PHYLUM ARTHROPODA                                                   | General characteristics. (Corporal organisation) Form and function.<br>Classification.<br>Subphylum Cheliceriformes: General characteristics; Classification.<br>Merostomata and Pycnogonida: form and function.                                               |
| LESSON 16: PHYLUM ARTHROPODA: SUBPHYLUM CRUSTACEA (I)                          | General characteristics. Classification. Class Malacostraca: (corporal organisation) form and function, life forms and classification (Phyllocarida, Hoplocarida and Eumalacostraca).                                                                          |
| LESSON 17: PHYLUM ARTHROPODA: SUBPHYLUM CRUSTACEA (II)                         | Class Remipedia, Cephalocarida, Branchiopoda and Ostracoda: external anatomy and life forms.                                                                                                                                                                   |
| LESSON 19: THE DEUTEROSTOMES. PHYLUM CHAETOGNATHA. PHYLUM ECHINODERMATA        | Phylum Chaetognatha: General characteristics. Form and function.<br>Reproduction and development.<br>Phylum Echinodermata: General characteristics. (Corporal organisation) Form and function. Endoskeleton. Water vascular system.                            |
| LESSON 18: PHYLUM ARTHROPODA: SUBPHYLUM CRUSTACEA (III)                        | Class Maxillopoda: General characteristics and classification;<br>Mistacocarida, Copepoda, Tantulocarida and Branchiura: a external anatomy and life forms; Cirripedia: general characteristics; form and function; classification.                            |
| LESSON 20: PHYLUM ECHINODERMATA (II)                                           | Class Crinoidea, Asteroidea and Ophiuroidea: General characteristics; (corporal organisation:) form and function; reproduction and development.<br>Systematic summary                                                                                          |
| LESSON 21: PHYLUM ECHINODERMATA (III)                                          | Class Echinoidea and Holothuroidea: General characteristics; (corporal organisation:) form and function; reproduction and development.<br>Systematic summary                                                                                                   |
| LESSON 22: PHYLUM HEMICHORDATA                                                 | General characteristics and classification.<br>Class Enteropneusta and Pterobranchia: general characteristics; form and function; reproduction and development.                                                                                                |
| LESSON 23: PHYLUM CHORDATA (I)                                                 | General characteristics and classification.<br>Subphyla Tunicata and Cephalochordata: general characteristics; form and function; reproduction and development.                                                                                                |
| LESSON 24: PHYLUM CHORDATA (II)                                                | The Agnatha: general characteristics and classification. Class Myxini and Cephalaspidomorphi: form and function.<br>The Chondrichthyes: general characteristics; (corporal organisation:) form and function; reproduction and development; systematic summary. |
| LESSON 25: PHYLUM CHORDATA (III)                                               | The Osteichthyes: general characteristics; (corporal organisation:) form and function; functional adaptations; migrations; reproduction and development; systematic summary.                                                                                   |
| LESSON 26: PHYLUM CHORDATA (IV)                                                | The Marine Tetrapoda: main groups; adaptations of the reptilia, birds and mammalian to the marine environment; systematic summary and general characteristics of the orders                                                                                    |

## PRACTICAL LESSONS

Lesson 1.- PORIFERA. The skeleton of Sponges: methods of extraction and preparation of spicules; microscopical study.

Lesson 2.- CNIDARIA. The polyp and the medusa: morphology. Observation of representatives of Hydrozoa, Scyphozoa and Anthozoa.

Lesson 3.- MOLLUSCA I. External morphology of the main groups: Polyplacophora, Scaphopoda, Bivalvia, Gastropoda and Cephalopoda; identification with keys of several species.

Lesson 4.- MOLLUSCA II. Internal anatomy: dissection of a Bivalvia: *Mytilus galloprovincialis*.

Lesson 5.- POLYCHAETA. External morphology: Errantia and Sedentaria polychaetes; identification with keys of some species.

Lesson 6.- ARTHROPODA I. Crustacea: External morphology; internal anatomy: and dissection of a Malacostraca: *Nephrops norvegicus*; observation and identification of brachiurans.

Lesson 7.- ARTHROPODA II. Crustacea: observation of Amphipoda, Isopoda, Cirripedia and Copepoda; identification with keys of some species. Pycnogonida And Xiphosura: observation of some exemplars.

Lesson 8.- ECHINODERMATA I. External morphology of the main groups. Identification with keys of several species.

Lesson 8.- ECHINODERMATA II. External morphology and internal anatomy: dissection of a Echinoidea: *Paracentrotus lividus*.

Lesson 10.- Chordata. Observation of Tunicata and Cephalochordata; external morphology, identification and dissection of a Osteichthyes.

### Planning

|                                 | Class hours | Hours outside the classroom | Total hours |
|---------------------------------|-------------|-----------------------------|-------------|
| Laboratory practical            | 20          | 20                          | 40          |
| Seminars                        | 2           | 2                           | 4           |
| Collaborative Learning          | 3           | 30                          | 33          |
| Lecturing                       | 27          | 40.5                        | 67.5        |
| Objective questions exam        | 0.5         | 0                           | 0.5         |
| Problem and/or exercise solving | 2           | 0                           | 2           |
| Laboratory practice             | 1           | 0                           | 1           |
| Essay                           | 2           | 0                           | 2           |

### Methodologies

|                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Laboratory practical | Attendance is compulsory; in order for the laboratory sessions to be evaluated, attendance to at least 80% of them is required.<br>Attendance to at least 80% of the internship will be required in order for the internship to be evaluated.<br><br>Study of the external and internal anatomy of the main groups using common microscopical techniques in Zoology                                                        |
| Seminars             | During the first seminar there will be an exposition of a topic considered of relevance in the training in Marine Zoology and directly related to the practical work that must be done. Also, the methodology to do the collaborative work will be explained. Possible doubts will be solved. In the second seminar, the students will present the results achieved in the collaborative work.<br>Attendance is compulsory |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Collaborative Learning | Collaborative learning through a mainly practical work in small groups. The works will include the following phases: sampling through photographic transects, identification of the fauna in the photographs and their adaptations to their habitat, and writing the results.<br>The other collaborative work is related to the labels of fish and shellfish in the markets and fish auctions. Students have to take pictures of fish and shellfish and to their labels. Then they have to compare the information of the labels with the required information by the regulations. Finally, students have to study the biology of these fish and shellfish and its relationship with the fishery. |
| Lecturing              | This method refers to the explanation of the topics to the students. The teacher clarifies the syllabus content to the students. Although teachers are more active than students the teacher will ask questions to keep the students attentive.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### Personalized assistance

| Methodologies          | Description                                                                                                                                                                                                                                                                           |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Lecturing              | Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation |

To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation |

### Assessment

|                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Qualification | Training and Learning Results |                 |          |  |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|-------------------------------|-----------------|----------|--|
| Laboratory practical   | Attendance to the laboratory sessions is mandatory and attendance to at least 80% of the internships will be required in order for this methodology to be evaluated.<br><br>The attendance and the work done by the students during the realization of the practices in the laboratory (1 point, 10%)<br><br>A practical exam in the laboratory at the end of the course (1,5 points, 15%). To pass this methodology, students have to get a minimum mark of 0,6 points in the practical exam. | 25            | A2<br>A5                      | B1<br>C9<br>C10 | D1       |  |
| Seminars               | Assistance and participation of the students in the two seminars and the presentation of the works done by students will be evaluated. Also their participation in the subsequent discussion will be evaluated.                                                                                                                                                                                                                                                                                | 5             | A2<br>A3<br>A4<br>A5          | B1<br>B2<br>B4  | D1<br>D2 |  |
| Collaborative Learning | The ability to work together autonomously as well as the writing document of the results obtained (2 points, 20%).<br><br>To pass this methodology, students have to get a minimum mark of 0,8 points in the assignments.                                                                                                                                                                                                                                                                      | 20            | A2<br>A3<br>A4<br>A5          | B1<br>B2<br>B4  | D1<br>D2 |  |
| Lecturing              | Continuous assessment: four mid term multiple choice tests (10 minutes) will be done during the semester. These tests will not get rid of themes. Each one will be score up to 0.5 points (2 points in total, 20%)<br><br>Final exam: a major written exam will be done with short answer questions (3 points, 30%)<br><br>Both results will be added. To pass this methodology, students have to get a minimum mark of 2 points.                                                              | 50            | A2<br>A5                      | B1<br>C9<br>C10 |          |  |

### Other comments on the Evaluation

The update official calendar of the final exams can be found at: <http://mar.uvigo.es/alumnado/examenes/>  
The final qualification of the subject is the sum of the mark obtained in each of the proposed methodologies, provided that the rating of each one of them exceed 40% of the mark.

**Laboratory practical:** in the case of unexcused absences higher than 20%, there will be no right to the recovery of this learning methodology in the second opportunity. In the case of not reaching 40% of the grade of the laboratory exam,

students will have the right to take another laboratory exam at the second opportunity.

**Collaborative learning:** in the case of not reaching 40% of the grade in the collaborative work, the student will be entitled to submit new work in the second opportunity.

**Seminars:** in the case of unexcused absences, students will not have the right to recover this methodology at the second opportunity.

**Lectures:** in the second opportunity the final exam will be worth 5 points (50%); follow-up tests (continuous evaluation) are carried out throughout the course will not be taken into account. The exam will consist of a multiple-choice part similar to the follow-up tests and another part of short answers.

In the second opportunity the student must present only failed methodologies.

NOT EVALUATED qualification will be applied to students who will not present or the final exam of theory or the practical exam.

The marks obtained in seminars and tutorized works will be kept for the next course.

### Global assessment option

The global assessment option will consist of a written exam of the theoretical contents (50% of the qualification) and of the seminars (European regulation of fish and shellfish labeling and zoning in the rocky intertidal in Galicia) (25%), followed by an exam in the laboratory in which the knowledge and skills of the students in the practical contents of the subject will be evaluated (25%).

The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start. Given the experimental nature of the practices, attendance at them is mandatory to be eligible for this evaluation option. **Failure to attend the practices, with no justified cause invalidates this possibility, as well as the opportunity for extraordinary evaluation (2nd opportunity).**

Students are strongly requested to fulfill a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher's proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.
