#### Educational guide 2017 / 2018

## Universida<sub>de</sub>Vigo

#### **Presentation**

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The stablisment of the Universitary System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but no the pioneering spirit of the chemists in research of in the quest for a better service to the society.

#### Degrees given in the Faculty

Degree in Chemistry

- Masters And Doctorates:
  - o Industry and Chemical Research and Industrial Chemistry
  - o Theoretical chemistry and Computational Modelling
- Master:
  - o Science and Technology of Conservation of Fishing Products

General	"Machine translation into english of the original teachi	ng guide"				
description	cription The main aim of this subject is to give the students the methodology, direction, management and organisation					
	of projects in the field of the Chemistry. With the know	ledge in Chemis	stry, Chemical Er	ngineering and other		
	affine matters, the student has to be able to develop a Project in Chemistry. At the end of the course the					
	student has to be able to draft, schedule, execute and					
	<u> </u>		•			

Com	petencies
Code	
C19	Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
C20	Evaluate, interpret and synthesize data and chemical information
C22	Process and perform computational calculations with chemical information and chemical data
C23	Present oral and written scientific material and scientific arguments to a specialized audience
C24	Recognize and analyze new problems and plan strategies to solve them
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D6	Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data
	representations
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D12	Plan and manage time properly
D13	Make decisions
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself
D16	Develop an ethical commitment
D17	Develop concern for environmental aspects and quality management
D18	Generate new ideas and show initiative

Multiple choice tests	0	4	4
Long answer tests and development	3	8	11
Jobs and projects	0	4	4

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	The sessions *magistrales are theoretical classes to all the group in 13 weeks and of an hour of length (13 *x 1 *h/*sem). They will consist in the exhibition by part of the professor of the most fundamental appearances of each subject, taking like base the available documentation in the platform FEAR. The students will have to work, before each session, the material that provides him the professor related with the content that will treat in each subject.
Seminars	They will give to groups reduced, in 13 weeks (13 *x 2 *h/*sem). The students, with the support of the professor, will realise concrete projects (total or partial) of industrial installations, applying the knowledges purchased in the career. They will use computer programs of simulation to build and design the projects realised. It will realise in the classroom of computing.
Troubleshooting and	/ or In each subject, that was necessary, will put to disposal of the students a bulletin of problems.
exercises	Some of these problems will resolve in class and others will have to be resolved by the students of individual form and deliver them so that they are corrected by the professor.

The students of individual form or in group, will have to realise a short exhibition on the results obtained, a discussion of the results together with the conclusions of the project developed along the course

Methodologies	Description
Master Session	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Troubleshooting and / or exercises	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Seminars	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Presentations / exhibitions	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Tests	Description
Multiple choice tests	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Long answer tests and development	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Jobs and projects	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.

Assessment				
	Description	Qualification	Lea	ing and arning esults
Troubleshooting and / or exercises	The students will have to deliver, in the terms indicated, the problems proposed	5	C19 C20 C22 C24	D3 D4 D6 D7 D8 D9 D12 D14 D15 D18
Presentations / exhibitions	The students will realise an exhibition of the project realised	10	C23	D1 D3 D5 D8 D9 D12 D14
Multiple choice tests	They will realise two test type test along the course. One when finalising the two first subjects and the another when finalising the subject 3. The length of the same will be between 20 minutes and 1 hour		C19	D3 D7 D9 D12 D14
Long answer tests and development	It will realise a long proof of all the matter of the *asignatura	35	C19	D3 D7 D9 D12 D14

Jobs and projects	The students will realise and will deliver in the dates indicated, all	40	C20	D1
	the parts of the project that proposes him to principle of course		C22	D3

FIRST ANNOUNCEMENT&\*nbsp;To

surpass the \*asignatura is compulsory to obtain, like minimum 50% of

the qualification assigned to the total realisation of the project (project, seminars and

presentation/exhibition), being necessary, besides reach like minimum a 3

on 10 points in the final proof to take into account the other elements of  $% \left\{ 1\right\} =\left\{ 1\right\}$ 

evaluation.CONDITION

OF PRESENTED: The participation of the student in any one of the proofs

written, the delivery of some work, or the assistance to two or&\*nbsp; more sessions of seminar &\*nbsp;it will involve the condition of presented and therefore

the allocation of a qualification&\*nbsp;SECOND ANNOUNCEMENTIn this

announcement the students will have to present to those parts of the \*asignatura that have not been surpassed previously. Ethical commitmentit expects that the present student a suitable ethical behaviour. In case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, for example), will consider that the student does not gather the necessary requirements to surpass the matter.

Contents	
Topic	
Subject 1. Introduction	Historical perspective of the development of the materials. Relation between structure and properties. Classification of the materials. Need of new materials.

Subject 2. Properties of the materials: mechanic electrical, magnetic, optical and thermal.	s, Mechanical properties: elastic and plastic deformation. Ductility, resilence and tenacity. Hardness. Mechanisms of dislocation. Systems of slide. Fracture and fatigue.
	Electrical properties: electrical conductivity. Semiconductors. Driving in ceramics and polymers. Ionic conductivity. Dielectric behaviour. Ferroelectricity and piezoelectricity.
	Magnetic properties. Cooperative magnetism: ferromagnetism. Ferromagnetic commands. Cycles of histéresis. Anti- and ferrimagnetism. Superconductivity.
	Optical properties. Luminescence. Lasers. Optical fibres. Thermal properties. Calorific capacity. Thermal dilatation. Thermal conductivity. Thermal tensions.
Subject 3. Metallic materials and alloys.	Diagrams of phase. Thermal treatment of the metallic alloys. ferric Alloys. Steels. No-Ferric Alloys. Alloys with memory of form.
Subject 4. Ceramic materials.	Usual structures. Sillicates. Carbon. Imperfections. Glasses. Clays. Refractory.
Subject 5. Material polymers.	Structures of the polymers. Mechanical and thermomechanical characteristics. Thermoplastic and thermostable polymers. Applications and forming of the polymers.
Subject 6. Compound materials.	General characteristics. Classification. Materials reinforced with: particles, fibres and structural compounds.
Subject 7. Degradation of materials.	Metallic oxidation and passivation. Methods of protection against the corrosion. Methods of self-reparation.
Subject 8. New materials and nanomaterials.	Nanoscience and nanotechnology. Methods of preparation. Properties to nanoscale.
Subject 9. Characterisation of materials.	Electronic microscopy, fotoelectrónic spectroscopy.

Planning			
	Class hours	Hours outside the classroom	Total hours
Master Session	26	45	71
Seminars	13	32	45
Short answer tests	4	30	34

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	The students will receive 26 hours of magistral classes in an only group, that will devote to the presentation of the fundamental appearances of each subject. The platform of "teledocencia" will use to provide the supplementary material related with the matter.
Seminars	They will devote to the resolution of doubts or questions that arise in the development of each subject, to the exhibition by part of the students of subjects related with the matter, as well as to the resolution of exercises and exposed problems by the professor.

Personalized attention			
Methodolog	ies Description		
Seminars	During all the educational period the students will be able to consult all type of doubts related with the matter in the tutorial hours.		

<b>Assessme</b>	nt			
	Description	Qualification	Traini	ng and
			Lea	rning
			Res	sults
Seminars	In addition to resolving practical exercises that allow to the students settle the	40	C5	D1
	knowledges on the subjects developed in the classes of theory, and to resolve all		C8	D3
	the exposed doubts, the classes of seminar will use also to carry out to continuous		C19	D4
	evaluation of the students.		C20	D5
			C23	D7
	This process of continuous evaluation will realise through the resolution of exercises	5		D8
	and/or problems related with the contents of the matter, as well as the resolution of	:		D9
	exposed short questions by the professor that the students will have to deliver for			D12
	his evaluation.			D13
				D14
	Also will carry out by means of the preparation and exhibition by part of the students of subjects related with the matter.			D15

Short	Along the cuatrimestre will realise two short proofs for the evaluation of the	60	C5	D1
answer te	sts competitions purchased in the matter.		C8	D7
	The first of them will cover the subjects 1-5 and will suppose 36% of the final note.		C18	D12
	The second will cover the subjects 6-9 and will suppose 24% of the final note. To		C19	D13
	surpass the matter is necessary to reach a minimum of 40% in each one of the		C20	
	short proofs.			

Observations: it is compulsory the assistance to all the planned activities that carry evaluation. The participation in 20% of the activities of evaluation of the seminars along the cuatrimestre, or in any of the short proofs of planned evaluation, will involve the condition of presented and thus, the qualification in the record of the matter. It will be necessary to surpass the two short proofs (obtain a minimum of 40% of the note of each one) to be able to take into account the other elements of evaluation.

July Evaluation: the students that do not surpass one or the two short proofs that realise during the cuatrimestre, will have to present to the corresponding part in the announcement of Julio. This proof will substitute to the results obtained in the tests shorts realised along the cuatrimestre. They will keep the note of the remaining elements of evaluation of the cuatrimestre.

Contents	
Topic	
Subject 5. Organometallic chemistry of the main groups elements.	Introduction. Synthesis, properties and applications of the organometallic compounds of Li, Mg, B and Al.
Subject 6. Organometallic chemistry of the transition metals (I)	Introduction. Types of ligands. Bonding. Characterisation.
Subject 7. Organometallic chemistry of the transition metals (II)	Types of organometallic reactions: substitution, oxidative addition, reductive elimination, insertion, reactions of coordinated ligands, etc.
Subject 8. Organometallic chemistry of the transition metals (III)	Reactivity of organometallic compounds: carbonyl, olefin, carbene, and cyclopentadiene complexes.
Subject 9. Organometallic catalysis.	Introduction. Olefin metathesis. Alkene hydrogenation. Carbonylation of methanol. Hydroformylation of alkenes.
Subject 10. Metallic clusters	Introduction. Types. Structure. Properties.
Subject 1. Inorganic solids: introduction and bases.	Technological importance of the inorganic solids. Classification of solids. Polymorphism, pseudomorphism, polytypism. Formulation of inorganic solids incorporating structural information.
Subject 2. Structural rationalization in inorganic solids.	Sphere packing. Linear, planar, and theoretical densities and packing factors. Interstitial sites in crystal structures. Determining principles of the structure of the solids. Main solid structures.
Subject 3. Defects and no stoichiometry in the solids.	Types of defects. Ionic conductivity. Solid electrolytes. Non- stoichiometric compounds. Solids of different dimensionality. Diffusion.
Subject 4. Methods of preparation of solids.	Ceramic methods. Microwave methods. Sol-gel method. Precursor method. Hydrotermal methods. Chemical vapor deposition and chemical vapor transport (CVD and CVT), etc.
(*) Tema 11. Métodos de preparación de sólidos	(*)Método cerámico. Ruta do precursor Química branda. Síntese en altas presións Formación de sólidos a partir de gases e a partir de líquidos. Cristaloxénese
Practices of the chemistry of the coordination compounds (5 sessions)	Preparation and characterisation of some coordination compounds.
Practices of organometallic chemistry (4 sessions	Preparation and characterisation of some organometallic compounds.
Practices of inorganic solids (4 sessions)	Preparation and study of the properties of some inorganic solids.

				D14
				D15
Short answer	The students will realise two 2-hours written proofs.	45	A5 C2	D1
tests	'		C10	D14
			C12	
			C14	
			C20	

Observations: The participation in any of the proofs of planned evaluation and the assistance to two or more sessions of laboratory will involve the condition of presented and, therefore, the allocation of a qualification in the record of the matter. It will be necessary to obtain a minimum of 4 points on 10 in the qualification of each one of the planned short proofs to be able to take into account, in the final qualification, the remaining elements of evaluation. In the evaluation of July the students will have to do a written proof that will consist of two parts that will correspond with the items evaluated in the two short proofs realised during the course. It will not be necessary to realise the part of the proof that, in the corresponding short proof, obtained an equal or upper qualification to 4 on 10, keeping the qualification obtained. This proof will have a value of 45% of the qualification and will substitute to the results of the short proofs. The remaining elements of evaluation are not recoverable and the qualifications obtained will add to the one of the quoted proof as long as the qualification obtained was equal or upper to 4 on 10. In case to obtain a lower qualification, will be this the one who appear as final qualification of the matter.

General	This subject will integrate all the previous knowledge	of Organic Chem	istry, in particu	lar regarding organic
description	synthesis and his consequences in the creation of new			
	rethrosynthetic analysis , paying particular attention	to the analysis of	synthetic prop	osals that take place with
	selectivity (chemo-, regio- and stereoselectivity).			
	, , , , , , , , , , , , , , , , , , ,			

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C10 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
- C11 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C13 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- C24 Recognize and analyze new problems and plan strategies to solve them
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- O7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D13 Make decisions

Learning outcomes	т.,	_!!	
Expected results from this subject	Ir		nd Learning sults
1. Recognise structural elements in organic molecules.	A2	C2 C11 C12 C13 C23 C24	D1 D3 D7 D9 D13 D14 D18
2. Propose retrosynthetic sequences of target molecules.	A1 A2 A5	C2 C11 C12 C13 C24	D1 D3 D4 D5 D7 D9 D13 D18
3. Analyse alternative retrosynthetic proposals.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D5 D7 D9 D13 D18
4. Design synthetic sequences to target molecules.	A1 A2 A5	C2 C10 C11 C12 C13 C20	D1 D3 D4 D5 D7 D9 D13 D18
5. Value the use of structure-simplifying reactions.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D7 D9 D13 D14 D18
6. Recognise relationships between functional groups of target molecules.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D7 D9 D13 D18
7. Use properly the functional groups interconversions.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D5 D7 D9 D13 D14 D18

8. Propose synthesis of carbocyclic and heterocyclic compounds.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24 C25 C26 C27 C28	D1 D3 D4 D7 D9 D13 D14
9. Know the reactivity of heterocyclic compounds.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24 C26 C27 C28	D1 D3 D4 D7 D9 D13 D14
10. Know the reactions that can provide selectivity (chemo-, regio- and stereoselectivity) in chemical transformations.	A1 A2 A5	C2 C10 C11 C12 C13 C19 C20 C24	D1 D3 D4 D5 D7 D8 D9 D13 D14 D18
11. Handle appropriately the disconnections between unsaturated fragments.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D5 D7 D9 D13 D14 D18
12. Evaluate and propose the use of protective groups in organic synthesis.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D7 D9 D13 D14 D18
13. Recognise and value the importance of organic synthesis in the advancement of society.	A2 A4 A5	C23	D15
Topic  1. THE DESIGN OF ORGANIC SYNTHESIS. RETROSINTHETIC ANALYSIS  1.1. Introduction to target-oriented synthesis. 1.2. Rethrosynthetic analysis. The synthon ap rethrons. Strategic disconnections. The synthom is Preliminary evaluation. ii. Simplifying transforms. iii. Powerful transforms. iv. Interconversion, addition and removal of full 1.3. Computer-based synthetic strategies.	esis tree	2.	

2. CRITERIA OF SELECTION OF DISCONNECTIONS	2.1. One- and two-group C-X disconnections (1,n). i. Synthons and synthetic equivalents.
	ii. Alternate polarities.
	iii. Inversion of polarity. iv. Functional groups interconversions.
	v. Addition and removal of functional groups.
	2.2. One- and two-group C-C disconnections (1,n).
	i. One-group C-C disconnections.
	ii. (1,n) C-C disconnections of difuncionalized compounds.
	2.3. Tactics of skeletal transformations. Rearrangements and
	fragmentations.
3. FUNCTIONAL GROUPS INTERCONVERSIONS	3.1. Interconversion of functional groups by substitution, addition and
	elimination.
	3.2. Oxidation reactions.
	i. Transition metals (*Cr and *Mn).
	ii. Methods based in the generation of "activated DMSO".
	<ul><li>iii. Hypervalent iodine reagents.</li><li>iv. Olefin epoxidation and dihydroxylation.</li></ul>
	3.3. Reduction reactions.
4. CHEMOSELECTIVITY. PROTECTIVE GROUPS IN	4.1. Strategies for the selection of protective groups: orthogonal or of
ORGANIC SYNTHESIS	modulated sensitivity.
	4.2. Description of protective groups.
	i. Sensitive to acids or bases.
	ii. Sensitive to fluoride.
	iii. Sensitive to reduction and oxidation reagents .
	iv. Other protective groups.
5. STEREOCHEMICAL STRATEGIES .	5.1. Description of Stereochemistry.
STEREOSELECTIVITY	i. Symmetry and chirality. Stereogenic units.
	ii. Topicity.
	<ul><li>iii. Relative configuration. Descriptors.</li><li>5.2. *Stereochemistry in chemical reactions.</li></ul>
	i. Product selectivity.
	ii. Simple- and induced-distereoselectivity.
	5.3. Disconnections based in chiral fragments.
6. DISCONNECTIONS OF UNSATURATED	6.1. Stereoselective olefin synthesis .
6. DISCONNECTIONS OF UNSATURATED COMPOUNDS	<ul><li>6.1. Stereoselective olefin synthesis .</li><li>i. Carbanions stabilised by phosphorous: Wittig and HWE reactions.</li></ul>

Methodologies	
	Description
Seminars	In this activity, which is scheduled to take place twice a week, the most complex topics of the subject will be discussed, and the exercises and problems previously proposed by the teaching staff will be solved.
Laboratory practises	Each student will plan and execute the corresponding lab experiments in sessions lasting 3.5 hours. The students will be provided with the explanation of the lab session by the teaching staff. All the observations, calculations and notes for every experiment will be collected in a lab notebook, which will also include the discussion of the questions posed in the experiment description as well as the spectroscopic characterization of the synthesized compounds.
Master Session	The teaching staff will explain the general contents of the course paying particular attention to those considered key topics and of the greater difficulty. In anticipation of each master session, all the handouts and presentations will be made available in the TEMA teaching platform for downloading by the students.

Personalized attention	Personalized attention		
Methodologies	Description		
Master Session	The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.		
Seminars	The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.		
Laboratory practises	The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the laboratory practice, paticularly in the lab sessions and beforhand.		
Tests	Description		
Short answer tests	The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the short answer tests, informing beforehand about his/her availability. In addition, short answer test exams from previous years will be solved in seminars before the official tests take place.		
Long answer tests and development	The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the long answer tests, informing beforehand about his/her availability. In addition, long answer test exams from previous years will be solved in seminars before the official tests take place.		

Assessment				
	Description	Qualification	Training an Learning Results	9
Seminars	The resolution of problems and questions posed in the seminar classes, as well as the homework carried out by the students in those tasks of personal work entrusted by the teachers will be valued.  Results of the learning:  All the indicated, since the seminars will take place along the course.	20	_	)3 )4 )5 )7 )8 )9

#### 1.- The work carried out in the laboratory: the assistance to each one of the 30 A1 C25 Laboratory practises sessions is compulsory. The attitude and skill of the student in the laboratory A2 C26 and the interpretation of the mechanisms and spectra will be valued (33 % of C27 Α4 the final note). C28 2.- The laboratory notebook (27 % of the final note). 3.- Written exam: it will consist on theoretical and practical guestions related to the lab experiments. It will take place in the official dates established by the Faculty (40 % of the final note). To pass the lab course it is mandatory to have passed each one of the three parts evaluated. Those students who passed the lab course in the academic year 2014-2015 are entitled to keep that grade in the present academic year. In the extraordinary exam the student will answer the written examination and will deliver a new laboratory notebook if required, keeping the qualifications obtained during the course in the others parts of the subject. Results of the learning: 1. Recognise structural elements in the organic molecules. 2. Design alternative synthetic sequences. 3. Handle reactions of functional groups interconversions. 4. Propose synthesis of carbo- and heterocyclic molecules. 5. Recognise selective reactions. 6. Recognise the importance of organic synthesis to the advancement of society. Short answer tests A short answer exam will be carried out (10%). 10 A1 C2 D1 A2 C10 D3 Results of the learning: 1. Recognise structural elements of organic molecules. A5 C11 D4 2. Propose retrosynthetic sequences. C12 D5 3. Analyse alternative retrosynthetic proposals. C13 D7 4. Value the use of structurally-simplifying reactions. C20 D9 5. Recognise relationships between functional groups. C24 D13 6. Use properly functional groups interconversion reactions. D14

				DT8
Long answer tests A global proof for the evaluation of the competitions acquired in the subject.	40	A1	C2	D1
and development For passing the subject the students will have to obtain a minimum of 50% in		A2	C10	D3
the written proofs (short and long answer). Therefore, the qualification of the		A4	C11	D4
remaining parts will only be added when the grade obtained in overall written		A5	C12	D5
proofs is equal or higher than two and a half points.			C13	D7
Results of the learning:			C19	D8
<ol> <li>Recognise structural elements of organic molecules.</li> </ol>			C20	D9
2. Propose retrosynthetic sequences.			C23	D13
<ol><li>Analyse alternative retrosynthetic proposals.</li></ol>			C24	D14
<ol><li>Value the use of structurally-simplifying reactions.</li></ol>			C25	D15
<ol><li>Recognise relationships between functional groups.</li></ol>			C26	D18
<ol><li>Use properly functional groups interconversion reactions.</li></ol>			C27	
7. Design synthetic sequences.			C28	
8. Propose synthesis of carbo- and heterocyclic molecules.				
<ol><li>Know the reactivity of heterocyclic compounds.</li></ol>				
10. Know selective reactions.				

#### Other comments on the Evaluation

The participation of the students in any of the acts of evaluation of the subject will involve that they purchase the condition of "presented" and, therefore, they will have assigned a qualification. Acts of evaluation are considered the assistance to the classes of laboratory (three or but sessions), the realisation of the written exams and the handling of a minimum of 25% of the homework assigned by the teaching staff.

11. Propose disconnections in unsaturated compounds.12. Know the use of protective groups in organic synthesis.

Evaluation of the July call:

- >1) Grade obtained by the students during the course: maximum of 4 points, divided in the qualification obtained by the students along the course in the resolution of the problems, homework, etc (maximum of 1 point) and the realisation of the laboratory exams (maximum of 3 points).
- 2) Work carried out by the students: maximum of 1,5 points

for the resolution and handling of the exercises proposed by the teaching staff after the evaluation of January, that will be

oriented to the acquisition of the necessary knowledge to pass the matter. This work will be handled in advance to the official date of the exam.

3) Written Tests: maximum of 4,5 points, which will evaluate the knowledge of the matter.

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Description
The aim that pursues in the seminars is to settle the knowledges and expand the competitions purchased in the masterclasses, giving practical and representative examples of the fundamental concepts that collect in each subject.
Each student will choose, to the start of the course, a subject of which suggest, or another if it is of interest for him, but always related with the program of the Environmental Chemical matter, and will realise a diagram and synthesis of the work to be exposed in a maximum time of 10 min, in which it will include a practical example extracted of one or several scientific articles. The aims to cover are: introduction and/or practical in the bibliographic research, preparation and presentation of the scientific work, comparison of results between different technical, evaluation of the environmental impact, etc Previous to the exhibition, the student/to will deliver, in a dossier with his name and title of the exhibition, a copy of all the articles consulted and of the presentation of the same. The assistance to the exhibitions is compulsory and any of the questions formulated during his development can fall in the examinations
They include other less conventional activities inside the program of the matter, like the assistance to conferences, webinars of the ACS, "workshops" or congresses that celebrate in the own University, what will allow to the student expand his horizons and begin to go in in contact with other realities further of the faculty, obtaining information at first hand through representatives of companies, of professors of other universities -and, even, of other countries - that will orient them on other opportunities and will promote the mobility of these students. Of this form, pretends transmit to the student the multiple possibilities that can him present in the future, showing him a fan of labour possibilities. These events are subject to the programmings extra-academic of the different centres in the own University, but in any moment overlap with activities programmed previously and, in his case, would look for other alternatives.
They would form part of the seminars in which the students will have to resolve by himself same, under the supervision of the professor but with a greater autonomy, real practical suppositions of chemical processes, detection of possible pollutants in which they derive, the environmental impact that produce and design strategies for his control
The masterclasses (55 min) pretend to give a global and real vision of the chemical processes that produce in the environment, the interaction between the different compartmentalized means, the pollutants present and those that generate, the most appropriate methodology for his analysis and his environmental control. Each one of the subjects will go documented with scientific articles, whose contents will serve to settle and expand the knowledges purchased in the theoretical classes, and of representative examples of the fundamental concepts that collect each subject. The methodology education-learning will be centred in the student, by what the classes will be headed to motivate a high participation by part of these in the classroom. The platform *Tem@ will be the resource that allow to the student the communication with the professor and his mates, through a virtual application, at the same time to be the source of information of immediate access for them. In her they will be able to find the basic information and documentation on the matter that gives, the diary of activities, the exercises to realise and the qualifications.

Personalized	Personalized attention Methodologies Description		
Methodologi			
Seminars	In the seminars and in the workshops will do a follow-up of the personal work that was realising the student in this moment, related with the matter. They realised experiments of classroom, useful for the problems resolution, including the oral exposition and other complementary works that propose, in function of the evolution of the student in the process of learning		
Workshops	In the seminars and in the workshops will do a follow-up of the personal work that was realising the student in this moment, related with the matter. They realised experiments of classroom, useful for the problems resolution, including the oral exposition and other complementary works that propose, in function of the evolution of the student in the process of learning		

Assessment				
	Description	Qualification	Lea	ng and rning sults
Presentations / exhibitions	The presentations and other activities associated (ACS Webinars, conferences and Meeting/Symposiums) until arriving to the defence of the work.	20	C17	D1 D3 D4 D5 D8 D9 D10 D14 D16
Short answer tests	They will realise two short proofs of one or two hours of length, C1 and C2, along the quatrimester in which it gives the matter and whose dates will be fixed in the chronogram to the start of the course. They are not eliminatory		C2 C4 C18	D1 D3 D6 D7 D12 D13 D14 D15 D16
Long answer tests and development	The long proof will have until three hours and in her will go in all the subjects given of the matter and the activities associated to them.	50	C2 C4 C18	D1 D3 D6 D7 D12 D13 D14 D15 D16

All the partial qualifications will allow to make the final qualification, valuing the attitude of participation and the interest showed by the student along the course. Due to the fact that each one of the subjects will go documented with scientific articles, some question extracted of them will be able to form part of the short proofs and/or long and in the second announcement.

It considers no-presented (NP) not assisting to 25% of the face-to-face hours and/or not realising any of the proofs (short or long) neither participate in the activities programmed. In the moment in that any of the parts have qualification, in records will appear said qualification obtained, although it have not realised any another proof or activity programmed.

In the second announcement, the students will have the opportunity to recover 50% of the matter. This proof contemplates the same contents that require for the long proof and will keep the qualifications of the others sections evaluated along the course.

To achieve approve the matter, the students will have to surpass 50% of all and each one of the proofs and activities program of the matter.

General	The matter is allocated to contribute to the stu			
description	interdisciplinar science that is among different			
	study of the bioactive compounds and in parti	cular its discovery, deve	elopment, identii	fication and mechanism
	of action at molecular level.			

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C22 Process and perform computational calculations with chemical information and chemical data
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D10 Work at a national and international context
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself
- D16 Develop an ethical commitment
- D17 Develop concern for environmental aspects and quality management

Contents	
Topic	
Subject 1. Introduction: general aspects of Pharmaceutical Chemistry	Definitions, aims and scope of the Pharmaceutical Chemistry. Nomeclature of drugs and classification systems. Chemotherapeutic and pharmacodynamic agents
Subject 2. Drug targets	Types of drug targets. Drug-target interactions. Nucleic Acids, enzymes and proteins as drug targets.
Subject 3. Receptors as drug targets	Types of receptors. Agonist, antagonist and inverse agonist drugs.  Measure and expression of pharrmacological effect. Drug tolerance and tachyphylaxis
Subject 4. Pharmacokinetic and related aspects	Absorption and transport through biological membranes, the Lipinski rules, bioavailabilty. Metabolism, prodrugs. Excretion. ways of drug administration and pharmaceutical forms.
Subject 5. Discovery, design and development of drugs	Strategies for lead discovery, serendipity, systematic screening, rational design. Pharmacomodulation. Patents. preclinical and clinical trials. Chemical development.
Subject 6. Strategies for drug design	Molecular modeling, indirect methods (QSAR, pharmacophore design), direct methods (docking).
Subject 7. Preparation, analysis and purification of drugs	Production in the pharmaceutical industry. fermentative processes. Drug processing.

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	In these sessions the professor will present in a structured form the general contents of the program, doing emphasis in important or difficult aspects of the subject. In addition, the professor, in advance and through the Tem@ platform, will make available to the student the material that will be used in these sessions. Students should previously check and complete this material by using the recommended literature.  In addition, periodic controls will be carried out to follow the study and understanding of the subject. These tests will be performed during some master sessions which will be determined in advance
Seminars	They will devote time to discuss the most complicated aspects of the treated subjects, to use programs of molecular modeling which will allow to work with several biomolecules cocrystallized with different ligands, as well as to present works, researchs or summaries carried out by the students and related with the content of the subject.
Outdoor study / field practices	The students will visit a company of the pharmaceutical sector, in which it will be able to appreciate the process of production in all its phases.  After the visit the students will have to answer, in schedule of class, to a test related with this visit.

Personalized attention			
Methodolog	ies Description		
Seminars	Time devoted by the teachers to attend the needs and queries of the students related with the study of the subject and developed activities. The teachers will inform in the presentation of the subject about the available schedule		

Assessment	
Description	Qualification Training and
	Learning Results

Master Session	Contents developed in the program study (subjects 1-6) will be evaluated by means of verbal or written questions formulated in the theoretical sessions. The written questions will be referents to the content treated in the previous two or three weeks.	7	A1 A3	C19 C23	D14 D15 D16
Seminars	Attendance and participation in the sessions, exercices and questions resolution, as well as the presentation of reports, summaries and works, will be qualified	23	A1 A3 A4 A5	C19 C20 C22 C23	D1 D3 D4 D5 D7 D8 D9 D10 D12 D13 D14 D16
Outdoor study / field practices	Attendance and active participation in the visit, as well as the results of the test will be qualified.	10	A3	C20	D14 D15 D17
Short answer tests	A short exam (one hour long) will be carried out at week nine. In this exam will enter the subject explained until that moment.	15	A1 A3 A5	C19 C20	D7 D12 D13 D14
Long answer tests and development	A global exam will be carried on closing date of evaluation in order to analyze the adquired competencies	45	A1 A3 A5	C19 C20	D7 D12 D13 D14

Participation of students in any of the evaluation parts, such as attendance to seminars (four or more) or the performace of written exams, will involve the condition of presented and therefore the obtaining of a qualification. Students should have a minimum mark in some of the evaluation parts in order to pass the subject. This minimum mark should be of 3.5 in the short test, and 4 in the global exam, as well as in seminars and study visit.

Evaluation in the July Call

1. Mark obtained by the students during the academic course: maximum 4 points

Marks obtained from verbal or written questions formulated in the theoretical sessions (maximun 0.7 point), visit test (maximun 1 point) and seminars (maximum 2.3 points) will be preserved.

2. Work carried out by the students: maximum 2 points

Finished the evaluation process of June, teachers will propose to the students who have not pass the subject to perform an individual work in order to adquire the competencies of which they will be evaluated in July. This work should be presented and defended before the exam.

The students will perform a written exam similar to June in which they will obtain a maximum of 4 points

	Description
Master Session	Presentation of the general aspects of the program, focusing on the fundamental aspects with more difficulties to be understood by the students. The lecturer will give the basic material by Tema platform in order to get the students familiarized with te topic prior to the presentation in class.
Troubleshooting and / o	or After each subject, the most relevant aspects will be tackled by means of problem and questions
exercises	solving.
Tutored works	The students will carry out a work focused on the design of a process for producing some product with industrial interest, taking into account the knowledge acquired during the master sessions.
Presentations / exhibitions	The students have to defend their tutored works in front of a jury made up of lecturers from the departments of Chemical Engineering or Analytical Chemistry and/or professionals from chemical industries
Outdoor study / field practices	Different outdoor studies will be carried out throughout the course, in order to get a deeper insight into the processes explained during the master sessions. Priority will be given to top companies of our socioeconomic environment.

Personalized attention	
Methodologies	Description
Master Session	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.
Troubleshooting and / or exercises	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.

Assessment				
	Description	Qualification	Lea	ing and rning sults
Troubleshooting and / or exercises	Different troubleshooting will be solved by the students at the framework of their tutored works	10	C16 C19 C22	D3 D5 D6 D7 D9
Tutored works	A work focused on the design of an industrially relevant process flowsheet diagram will be carried out during the term.	20	C16 C20 C22 C23	D1 D4 D5 D6 D7 D8 D10 D12 D13 D14
Presentations / exhibitions	The tutored works will be defended against a jury composed of lecturers from the Departments of Chemical Engineering and Analytical Chemistry and/or professionals from the chemical industry.	10	C16 C23	D1 D5 D8 D12 D13
Outdoor study / field practices	The students must unavoidably attend the outdoor studies in order to get a deper insight into the processes tackled during the master sessions. A report about questions on the plants will be doned by them after each visit.	5	C20 C22	D7 D8 D14 D15

Long answer tests and	A final long answer test will be done at the end of the course, and the	55	C16	D3
development	students will have to have a minimum of 5 out of 10 to pass the course.		C19	D7
•	·		C20	D12
			C22	D13
			C23	D14

The participation of the student in any of the acts of evaluation of the subject will imply the status of "submitted" And, therefore, the assignment of a rating. To pass the subject will be necessary to overcome with a total of 5 points Of 10 in each and every one of the written tests carried out.

It is expected that the student presents an appropriate ethical behavior regarding copy, plagiarism, use of Unauthorized electronic devices or commitment to collaborative work. Otherwise, the Student does not meet the requirements to overcome the subject. In this case, the overall grade in this course Will be suspended (0.0).

Finally, no electronic device will be allowed to be used during Express authorization. In the case of detecting its presence in the exam room, it will be considered a reason for not Passing the subject in the current academic year and the overall grade will be suspended (0.0).

#### Evaluation of the July call.

The grade obtained in problem solving, supervised work, presentations and exams will be preserved. Study, followed by the percentage established for the June convocation (at most 45% of the final grade). Therefore, the student will have to present a long answer test whose value will be a maximum of 55% of the Final note.

General	According to the memory of the Degree in Chemistry of the University of Vigo, the End of Degree project is a				
description					
	The objective of the subject is to offer the students the opportunity to apply the knowledges, skills and				
	competences adquired during the Degree studies.				
	The TFG is an original work that each student will do individually under the supervision of one or two tutors.				
	TFG subjects can correspond to experimental and/or theoretical works and/or of bibliographic reviews on				
	subjects related with the contains in the Degree in Chemistry. The final stage of the TFG will consist in a				
	written report and its public presentation.				

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C1 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Major aspects of chemical terminology, nomenclature, units and unit conversions.
- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C3 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules
- C4 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Basics and tools for solving analytical problems and characterization of chemical substances
- C5 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Characteristics of the different states of matter and the theories used to describe them
- C6 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of thermodynamics and their applications in chemistry
- C7 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: kinetics of change, including catalysis and reaction mechanisms
- C8 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main techniques for structural determination, including spectroscopy
- C9 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: characteristic properties of the elements and their compounds, including group relationships and variations in the periodic table
- C10 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
- C11 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C13 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds

- C14 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules
- C15 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: chemistry of biological molecules and their processes
- C16 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles and procedures in chemical engineering
- C17 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: metrology of chemical processes including quality management
- C18 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles of electrochemistry
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C21 Recognize and implement good scientific practices for measurement and experimentation
- C22 Process and perform computational calculations with chemical information and chemical data
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- C24 Recognize and analyze new problems and plan strategies to solve them
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- C29 Demonstrate skills for numerical calculations and interpretation of experimental data, with special emphasis on precision and accuracy
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D2 Communicate at a basic level in English in the field of chemistry
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D6 Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D10 Work at a national and international context
- D11 Adapt to new situations
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself
- D16 Develop an ethical commitment
- D17 Develop concern for environmental aspects and quality management
- D18 Generate new ideas and show initiative
