Educational guide 2018 / 2019

Universida_{de}Vigo

Presentation

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The stablisment of the Universitary System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but no the pioneering spirit of the chemists in research of in the quest for a better service to the society.

Degrees given in the Faculty

Degree in Chemistry

- Masters And Doctorates:
 - o Industry and Chemical Research and Industrial Chemistry
 - o Theoretical chemistry and Computational Modelling
- Master:
 - o Science and Technology of Conservation of Fishing Products

Code

- C3 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules
- C14 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C22 Process and perform computational calculations with chemical information and chemical data
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D6 Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Learning outcomes		
Expected results from this subject	Traini	ng and Learning Results
To describe in an unified way the electromagnetic field by means of Maxwell's laws. Apply the	C3	D1
basic boundary conditions in the vacuum or in materials.		D12
		D14
To derive the equation of propagation of an electromagnetic wave, and describe its main	C3	D12
characteristics. Relate this concept with the electromagnetic spectrum.		D14
To explain the empirical phenomena related with the interaction of radiation with	C3	D12
matter which cannot be explained by the Classical Theory, and the solutions proposed (wave-		D14
corpuscle duality, quantization of the radiation).		D15
To know the postulates of Quantum Mechanics and their consequences in the reformulation of the	C3	D1
microscopic theory of the Classical Physics.		D12
		D14
		D15
To explain the essentials of the theory of mathematical operators, including the concepts of	C3	D1
eigenfunction and eigenvalue, spectrum, linearity and hermiticity, complete sets of eigenfunctions	,	D9
etc.		D12
		D14

To write the fundamental operators of Quantum I	Mechanics (position, linear and angular moment,	C3	D1
Hamiltonian of simple systems).		C19	D9
			D12
			D14
To apply the previous concepts to the quantum-	mechanical study of simple systems, like a	C3	D1
particle in a square well potential, or to a harmon		C19	D3
independent Schrödinger equation.	ne osenator potential, by resolving the time	015	D6
macpenaent semounger equation.			D8
			D12
			D13
		_	D14
To calculate the eigenfunctions and eigenvalues	of the angular momentum operator.	C3	D6
		C19	D12
			D14
To resolve the wave equation of the hydrogen ato	om, and calculate its eigenfunctions (orbitals).	C3	D6
, , ,	, , , , , , , , , , , , , , , , , , , ,	C19	D8
		0_0	D12
			D14
To receive the Schrödinger equation for many ele	estron atoms by means of approximate methods		
To resolve the Schrödinger equation for many-ele	ection atoms by means of approximate methods.		D1
		C19	D5
		C20	D6
			D9
			D12
			D13
			D14
To explain in a simple way the transitions between	en states and the absorption and emission spectra	i.C3	D1
, , , , , , , , , , , , , , , , , , ,		C19	D6
		C20	D8
		C22	D9
		C23	D12
		C23	
			D14
			D15
To know the laws of Statistical Mechanics, which		nC14	D1
particular the Maxwell-Boltzmann statistics. Deriv	ve the partition function of a system and know in	C20	D4
detail its physical meaning.		C22	D5
		C23	D6
			D7
			D8
			D12
			D13
To apply the Maywell Boltzmann statistics to the	case of the ideal gases of atoms and polyatomic	C1.4	D13
particles to estimate thermodynamic properties,		C19	D4
molecular geometry and the vibrational frequenc	ies.		D5

	Introduction to the study of real systems.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	25	50	75
Problem solving	26	39	65
Introductory activities	1	1	2
Short answer tests	4	0	4
Essay questions exam	4	0	4

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Discussion of the fundamental points of each subject and presentation of those which are going to be tackled in the seminars
Problem solving	Resolution of numerical problems, theoretical questions and development of the theoretical points proposed in the masterclasses with the participation of the student.
Introductory activities	Presentation of the subject with a brief desription of: sections, contents, distribution of the sections in the short tests and in the final exam general norms of evaluation, etc.

Personalized at	
Methodologies	Description
Lecturing	Discussion of the main points of the subject. Answers to the questions related with the points raised by the students not only in the master session but also in the seminars. The students will know before the beginning of the course the schedules of the tutorial sessions offered by the professors of the subject. In those tutorials the student will be able to review his/her examinations
Problem solving	Answers to the questions related with the points the students may have raised in the classes devoted to problem resolution and in the tutorial sessions. The students will know before the beginning of the course, the schedules of the tutorial sessions offered by the professors of the subject. In those tutorials the student will be able to review his/her examinations

Assessment				
Description	QualificationTraining and			
	Learning			
	Results			

Problem solving	It will consist on the resolution of exercises and tests in the classroom. Nevertheless, the teacher will be able too to ask the student to deliver the solution to previously proposed exercises, that he/she has resolved in an autonomous way. In this case the teacher may ask the student tho explain to him indivdually how he/she has resolved the exercise.	25	C19 C20 C22 C23	D3 D4
Short answe tests	er During the course two short written tests will take place. They will correspond, respectively, to the contents of the sections 1 to 3 and 4 to 8 respectively. If any of those written tests is not passed the student must take on the corresponding part of the final exam (December/January). The student must take on the whole subject in the second-opportunity exam (June/July).	37.5	C3 C14 C19 C20	D6 D7 D9 D12 D13 D14
Essay questions exam	At the end of the course a full written test will take place in which the students can take on those aspects that they did not pass in the short written tets or improve in those they did pass.	37.5	C3 C14 C19 C20	D6 D7 D9

During the course two short written tests will take place corresponding to sections 1-3, the first one, and to sections 4-8, the second. Both will contain problems and questions and, if they are passed, the student, is not obliged to take on the corresponding part of the subject in the (first-call) final exam (December/January), although he/she can do so in order to improve his/her mark. On a voluntary basis the student may participate in the seminars by solving exercises on the board. Also voluntarily the student may solve at home some proposed exercises and deliver them to the teacher. The final exam will include the whole subject but is divided into two parts corresponding to the two tests so the student can take on any or both of them, even if they have passed the short written test of that part.

The student though, must reachin the written tests a global minimum mark of 3.5/10 in order to accumulate the points obtained by resolving exercises independently or in the classroom.

In the second-opportunity evaluation (July) the student should do a full written test; the points obtained by exercise resolution (troubleshooting section) will be mantained.

On a voluntary basis, the students will be able to participate in the resolution of exercises in the seminars or deliver the answer to the written exercises proposed in the classroom.

It will be understood that any student who has not taken any written test (short or the final exam) has not really followed the subject and will not be given a mark (his/her qualification will be "no presentado").

Code

- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C1 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Major aspects of chemical terminology, nomenclature, units and unit conversions.
- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C4 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Basics and tools for solving analytical problems and characterization of chemical substances
- C17 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: metrology of chemical processes including quality management
- C18 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles of electrochemistry
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C21 Recognize and implement good scientific practices for measurement and experimentation
- C22 Process and perform computational calculations with chemical information and chemical data
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- C29 Demonstrate skills for numerical calculations and interpretation of experimental data, with special emphasis on precision and accuracy
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself
- D16 Develop an ethical commitment

Contents	
Topic	
Subject 1: Analytical Chemistry and analytical process.	The Analytical Chemistry as a metrological science. Classification of the analytical methods. The analytical process: steps.
Subject 2: Sampling and sample treatment.	Sampling. Previous opertions to the analysis. Decomposition and dissolution. Introduction to the analytical separations.

Subject 3: Evaluation of the analytical results.	Analytical properties. Errors in Analytical Chemistry: classification. Basic statistics applied to the expression of the results. Comparison and
Subject 4: Quantitative analysis: volumetric and gravimetric.	rejection of the results. Volumetric reactions. Pattern solutions. Direct, indirect and back titrations. Formation, properties and purity of the precipitates. Calculations in volumetric and gravimetric analysis.
Subject 5: Acid-base titrations	Behaviour of monoprotic, polyprotic and amphoteric species. Titration curves. Detection of the end point: acid-base indicators. Titrant reagents. Analytical applications.
Subject 6: Complexometric titrations	Stability of the complexes. Masking reactions. Titration curves . Detection of the end point: metallochromic indicators. Analytical applications.
Subject 7: Precipitation titrations.	Factors affecting the solubility of precipitates. Titration curves. Detection of the end point: Mohr, Volhard and Fajans methods. Analytical applications.
Subject 8: Redox titrations	Factors influencing the redox potential. Titration curves. Detection of the end point: redox and specific indicators. Analytical applications.
Qualitative analysis (Laboratory)	Separation and identification of chemical species. (3 sessions)
	Resolution of an analytical problem by using a systematic separation procedure. (2 sessions)
Gravimetric analysis (Laboratory)	Gravimetric determination of nickel with dimethylglyoxime. (1 session)
Acid-base titrations (Laboratory)	Determination of the acidity of a vinegar sample. (1 session)
	Determination of acetylsalicycil acid in analgesics. (1 session)
Complexation titrations (Laboratory)	
	Determination of the hardness of a water sample. (1 session)
Precipitation titrations (Laboratory)	Determination of chloride in seawater using the Mohr method. (1 session)
Redox titrations (Laboratory)	Determination of wealth in oxygen in a hydrogen peroxide sample. (1 session)
	Determination of active chlorine in a bleach sample . (1 session)

Essay questions exam	3.5	16	19.5
Laboratory practice	2	6	8

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	They are theoretical classes (two hours each week) in which the professor will offer a global vision of each one of the subjects of the program, specially in the most relevant issues and in those with more difficulty for the student. Classroom sessions will develop in an interactive way with the students, commenting with them the on-line material (available in the platform Tem@) and the most adapted bibliography for the preparation, in depth, of each subject.
Problem solving	Two hours per week will be devoted to problems and/or exercices solving (seminars) aimed at reinforcing the knowledges acquired during the classroom sessions. In some sessions the professor will explain to the students the problems-type that allow them to solve the worksheet exercises. Instead, in other sessions, the own students will solve and will explain in the blackboard the exercises proposed (on-line material). Will be able to request to the students that deliver, of individual form, some of these solved exercises, that will be corrected by the professor.
Laboratory practices	Students will do experiments in the laboratory, in an individual way, in 3.5 hours per session. The student will have the scripts of the practices in the platform Tem@, so that they can have a previous knowledge of the experiments to perform. During the development of the practices the student will elaborate a notebook in which they will annotate all the relative to the experiment carried out (reactions, procedures, observations, results, etc.). Those students who have approved the laboratory practices in the academic year 2017-18, do not need to repeat them. In this case, marks reached in the laboratory sessions will be maintained.

Personalized attention

Methodologies	Description
Laboratory practices	Time devoted by the teacher to solve all doubts and queries raised by students during the course. The teacher will inform students in advance on the suitable timetable for tutorials.
Problem solving	Time devoted by the teacher to solve all doubts and queries raised by students during the course. The teacher will inform students in advance on the suitable timetable for tutorials.
Tests	Description
Practices report	Time devoted by the teacher to solve all doubts and queries raised by students during the course. The teacher will inform students in advance on the suitable timetable for tutorials.

Assessment			
	Description	Qualification	n Training and
			Learning Results
Problem solving	The teacher will evaluate the exercices/problems included in the worksheets and solved by students.	15	C1 D4 C2 D5 C4 D6 C18 D7 C19 D9 C22 D14
Laboratory practices	The teacher will carry out a follow-up the performance of students in the laboratory sessions (skills acquired). It is important to indicate that it is COMPULSORY the assistance to all the laboratory sessions. The lack of assistance, even being justified, will penalize the mark (in case of justified absences are recommended to made the practice in another group). If the number of absences is upper than 25 % of the laboratory sessions, students will not be allowed to pass the course.		A5 C1 D6 C2 D7 C4 D8 C17 D9 C18 D12 C19 D13 C20 D14 C21 D15 C22 D16 C25 C26 C27 C28 C29
Practices report	During the laboratory sessions, students will elaborate a noteboodk in which reflects the experimental work performed (reactions, procedures, observations, results, etc.). This notebook will be evaluated by the professor.	5	C20 D1 D3 D6 D9 D12 D14 D15 D16
Short answer tests	Students will carry out a first short exam corresponding to the four first subjects of the program (20% of the final mark). If students pass this exam, they only need to pass the examination corresponding to the rest of subjects in the final exam.	20	A5 C1 D1 C2 D3 C4 D4 C19 D5 C20 D6 C22 D7 D9 D12 D13 D14 D16
Essay questions exam	Students will carry out a final written exam corresponding to the four last subjects of the program. Students who have not passed the exam corresponding to the first four subjects, will need to pass the examination of the whole course.	30	A5 C1 D1 C2 D3 C4 D4 C18 D5 C19 D6 C20 D7 C22 D9 D12 D13 D14 D16

Laboratory At the end of the laboratory sessions, students will carry out a exam so that practice practical skills acquired can be evaluated. It is mandatory to overcome this examination to pass the practical part of the course.

D13

D15

Other comments on the Evaluation

First Announcement: To pass the course, it is compulsory to pass individually each one of the parts: theory and laboratory practices. For this, it is necessary to pass the written and laboratory examinations. Written exams will consist of theoretical questions and numerical exercises. To pass these exams it will be necessary to have a balance in the marks of both parts. The corresponding mark of the laboratory practices will be only taken into account once students have passed the theoretical examination. The participation of the student in any of the acts of evaluation of the course will involve the condition of presented and, therefore, the allocation of a mark. For this effect, they are considered acts of evaluation the assistance to practical laboratory sessions (two or more) and the realisation of written exams.

Second Announcement: In the extraordinary announcement the students will have to repeat those exams (theory and/or laboratory) that have not passed in the ordinary announcement. It will be preserved the mark reached by the student, during the course, in the other activities that appear in the evaluation section.

General Physical Chemical I is one of the first contacts of a student of Chemistry with the Physical Chemistry. This discipline studies the properties and the behaviour of the chemical systems employing the methods of the Physics. This matter presents the rigorous macroscopic treatment of chemical systems in equilibrium, systems already entered in Chemistry I. Taking advantage of the basic knowledge of the principles of the Thermodynamics, they will be applied to systems of chemical interest to obtain a quantitative description of them. For this purpose, it is fundamental to be familiarised with differential calculus in more than a variable and integral calculus in one variable, skill already seen in Mathematics II. The knowledge on the macroscopic description of the chemical systems that will be reached in this subject are complementary with the contents of the subject Physical Chemistry III the following year. The experimental applications of these knowledges will be studied in the subject of the second tern Physical Chemistry II.				

Code C6 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of thermodynamics and their applications in chemistry C18 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles of electrochemistry C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature C20 Evaluate, interpret and synthesize data and chemical information C23 Present oral and written scientific material and scientific arguments to a specialized audience D1 Communicate orally and in writing in at least one of the official languages of the University D3 Learn independently D4 Search and manage information from different sources D5 Use information and communication technologies and manage basic computer tools D6 Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations D7 Apply theoretical knowledge in practice D8 Teamwork D9 Work independently D12 Plan and manage time properly D13 Make decisions D14 Analyze and synthesize information and draw conclusions	Con	npetencies

General	In this subject, students reach an understanding of the funda-			
description	organic compounds structure and reactivity. Following two le			
	groups with multiple carbon-oxygen and carbon-carbon bond	ls, including aro	matic compound	ds, is studied.

Code

- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C10 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
- C11 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C13 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C21 Recognize and implement good scientific practices for measurement and experimentation
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Learning outcomes

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Exposition by the teaching staff of the syllabus' general aspects, with special emphasis in its fundamental features. The teaching staff will facilitate, through the virtual classroom, all the material needed for the student's personal work. Prior to class, the student must use this material and consult the recommended bibliography to complete the information, in order to improve his/her academic progress in the subject.
Problem solving	Two hours each week will be devoted to discussing the most prominent aspects of the topic, to solve questions arisen in the development of the lesson and to the resolution of the proposed exercises.
Laboratory practices	Laboratory experiments will be carried out, individually, in 3.5 h sessions. The students will find, in advance, in the virtual classroom, the material needed for the preparation of the experiments. At the start of each session the professor will do an exposition of the contents to be developed. During the experiments the student will elaborate a laboratory notebook recording all the observations pertinent to the experiment. At the end of the session the student will answer some questions regarding the work done.

Personalized attention

Methodologies Description

Problem solving The teaching staff will attend the students' queries regarding the different topics within the subject.

Attention to students schedules will be available through the Faculty of Chemistry webpage (http://quimica.uvigo.es/profesorado.php) and other ways provided by the university. Additionally, the teaching staff will use online channels to communicate with the students (electronic mail and tools within the virtual classroom).

Tests Description

Essay The teaching staff will tutor the students while preparing and carrying out a short laboratory project.

Assessment				
	Description	Qualification	n Train	ing and
				rning
			Re	sults
Problem	Class participation and resolution by the student of all the problems and/or	25	C2	D1
solving	exercises proposed in time/conditions established by the teaching staff will be		C10	D4
	evaluated.		C11	D7
			C12	D8
			C13	D9
			C19	D14
			C20	
Laboratory	Assistance to practical classes is mandatory.	0	C21	D12
practices			C25	D13
•	Monitoring of laboratory work will be evaluated as APT/NO APT. The following		C26	D14
	aspects will be considered in this section: pre-lab questionnaires, development of		C27	D15
	the experimental work, laboratory notebook, final questions. In order to pass the subject it is indispensable to be evaluated as APT.		C28	

Essay	The student will elaborate a report prior to the execution of a short project in the laboratory during the last week of practical classes.	15	C20 C23 C25	D1 D4 D5 D9 D14
Short answer tests	First test: 15%. It will cover contents corresponding to the first three lessons.	60	C2 C10	D3 D7
	Second test: 15%. It will cover contents corresponding to the last three lessons.		C11 C12	D12 D14
	Written test for the experimental part: 15%. To be taken by the students that have achieved the mention APT in the monitoring of the laboratory work. In this test, student acquisition of competencies and skills related to the experimental aspects of the subject will be evaluated.		C13 C19	
	Global test: 15%. In this test, student acquisition of competencies and skills related to the theoretical aspects of the subject will be evaluated.			

In order to pass the subject in January, it will be required:

- Achieve mention **APT** in the evaluation of the laboratory work.
- Achieve a **minimum mark of 3 points out of 10** in each of the two short theoretical tests (first test and second test) and in the written test for the experimental part.
- Achieve a minimum mark of 4 points out of 10 in the global test.

If any of the previous conditions is not fulfilled, the final mark for the subject will be the mark obtained for the Short answer tests section multiplied by 0.6 (60%).

• Achieve a minimum mark of 5.0 in the weighted addition of the marks for all the sections (troubleshooting, short answer tests, works).

The final grade for the students who pass the subject could be standardized so that the highest mark can reach a value of up to 10 points.

The participation of the student in any of the acts of evaluation for the subject will involve the condition of "presentado/a" and, therefore, the assignment of a mark. The acts of evaluation that will be considered are: assistance to laboratory practices (25% or more) or the delivery of reports/exercises (25% or more) or taking any examination.

Students of 2nd and subsequent enrollment. Those students who passed the laboratory practices during the 2014-15 or 2015-16 courses or were evaluated as APT during the 2016-17 or 2017-18 courses will be awarded the APT mention for the monitoring of laboratory work in the academic course 2018-19, not being necessary the completion of the experimental work again. However, **they must elaborate the report of the project** (15%) and **take the written test for the experimental part** (15%) to achieve the mark for the experimental part of the subject in the academic course 2018-19.

EVALUATION IN JULY

45% of the Short answer tests section can be repeated in July, in the following way:

- **Tests (30%)**. It will be carried out a global test in which the competences acquired in the theoretical aspects of the subject will be evaluated. The student must achieve **a minimum mark of 4 points out of 10** so that the result of this test will be taken into account in the global mark of the subject. This result will substitute the two lower marks obtained for the three theoretical tests carried out during the semester (first test, second test and global test), keeping the higher mark of the three, as long as it exceeds the required minimum.
- Written test for the experimental part (15%). A minimum mark of 3 points out of 10 must be achieved. The new mark will substitute the one achieved in the written test for the experimental part taken at the end of the semester.

The final mark will be the weighted addition of the marks for all the sections (troubleshooting, short answer tests, works), as long as all the required minima are reached. If this is not the case, the final mark for the subject will be the mark obtained for the Short answer tests section multiplied by 0.6 (60%). In case that this mark was lower than the one obtained in the end of semester evaluation, the official mark will be this last one.

Problem solving	Tipically, database searches and use of utilities of modelling software.	40	C22 C23	D1 D2 D3 D4 D5 D8 D10 D14 D15 D18
Essay questions exa	mWritten exam consisting of short questions.	40		D1 D2 D14 D15

Attendance at practical lectures (seminars) is compulsory. The student will be given a rating (0-10) as long as he/she has attended 3 or more seminar sessions, has delivered at least two reports on the exercises or practices proposed by the teacher or has done a written exam.

If the student fails in the first call he/she will be asked to improve some of the exercises or perform new ones provided by the teacher. In addition he/she will have to undergo a more thorough exam, which will weight 50% of the final grade.

Training and Learning Results

Formulate molecular Hamiltonians, with use of the Born-Oppenheimer approximation and discussion of their consequences.	C3 C20 C22 C23	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14
Work with potential energy profiles and surfaces and understand related concepts.	C3 C19 C20 C22 C28 C29	D1 D3 D4 D5 D6 D7 D9 D12 D13
Apply MO and EV methods for describing the chemical bond in simple systems and understand the limitations of these methods.	C3 C8 C19 C20 C21 C22 C23 C27 C28 C29	D14 D1 D3 D4 D5 D6 D7 D9 D12 D13 D14 D15
Describe orbital localization techniques and the basis for atomic orbital hybridisation.	C3	D1 D3 D4 D6 D9
Apply, with understanding of their foundations and their limitations, the main calculation methods (HF, DFT, post-HF) for the study of molecular structures.	C3 C19 C20 C22 C23 C28 C29	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14
Describe the forms of radiation-matter interactions and formulate the selection rules of electrical dipole.	C8	D1 D3 D4 D6 D9
Relate the radiation frequency with the molecular motion responsible of a spectroscopic transition	. C8	D1 D3 D4 D6 D7
Justify the broadening of spectral lines and the environmental effects on different spectra.	C8	D1 D3 D4 D6 D9

Interpret rotation and vibration-rotation spectra to obtain structural information, making use of simple quantum-mechanical models (rigid and flexible rotor and harmonic and anharmonic oscillators), selections rules and line assignment techniques.	C3 C8 C19 C20 C22 C23 C27 C28 C29	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14
Discuss the Franck-Condon principle and its consequences.	C3 C8	D1 D3 D4 D6 D9
Interpret electronic and photoelectronic spectra and obtain structural information.	C3 C8 C19 C22	D1 D3 D4 D5 D6 D7 D9
Describe the different deactivation processes of excited electronic states and their representation in a Jablonski diagram.	C8 C19	D1 D3 D4 D6 D9
Describe the foundations of magnetic resonance spectroscopies, and interpret the physical origin of chemical shifts and couplings in NMR spectra.	C8 C19 C22	D1 D3 D4 D6 D9
Describe the instrumental peculiarities of the spectroscopic techniques in different spectral regions, as well as the foundations and applications of laser and Fourier-transform based techniques.	C8	D1 D3 D4 D6 D9
Apply the theoretical knowledge of Physical Chemistry I to determine experimentally chemical equilibrium constants, activity coefficients and thermochemical magnitudes.	C6 C19 C20 C21 C23 C27 C28 C29	D1 D3 D4 D5 D6 D7 D8 D9 D12 D13 D14 D15

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	They will consist in the presentation of the fundamental aspects of each subject by the teacher, using the material available in the TEM@ platform (diagrams, bulletins of problems,). In addition, numerical problems will be proposed for a better understanding of theoretical concepts.
Seminars	The classes of seminar will be mainly work of the student, under the supervision of the professor, and will be used for: - Problems solving, individually or by groups Once the student has worked the basic concepts, reinforce those contents of each subject that can present a greater complexity.

Laboratory practices	Completion of laboratory or computational chemistry practices under the supervision of a teacher in an autonomous way. Lab practices will be done by pairs in sessions of 3,5 hours. With advance enough, students will have in the TEM@ platform guide notes for the practices together with all the additional neccessary material. Guide notes will present the essential elements to realise the experimental or computational practices, as well as the fundamental theoretical points and further data treatment. After practice completion, in the terms set by the teacher, it will be necessary to deliver the corresponding report, elaborated following the guidelines given by the teacher.
Autonomous problem solving	For each one of the subjects, some problems or other works to be solved by the student and delivered to the teacher in due time will be proposed.

Personalized attention

Assessment				
	Description	Qualification	Lea	ing and rning sults
Laboratory practices	This mark comprises the effort and the attitude, the skills and the competitions developed by the student during the realisation of the laboratory practices.	ata 10,0	C3 C6 C8 C19 C20 C21 C22 C27 C28	D1 D4 D5 D6 D7 D8 D12 D13 D14 D15

Autonomous problem solving	For each one of the subjects or groups of subjects, problems or additional work to be done by the students will be proposed.	ata 3,75	C3 C8 C19 C20 C22 C23	D5 D6
Essay questions exam	Realisation of one global writing test at the end of the term, in a date set by the Faculty of Chemistry.	como mínimo 52,5	C3 C8 C19 C20 C22	D1 D3 D6 D9
Practices report	Students must present a report for a laboratory practice proposed by the teachers. Students have to take care on format aspects related to the organisation, the correct use of the units, and the correct preparation of graphics and exhibition of the results. It will be also evaluated the critical analysis of results and getting right conclusions. Besides, all the practices will be evaluated by means of oral questions that the students can answer with the help of their laboratory notebook.	ata 5,0	C3 C6 C8 C19 C20 C22 C23 C27 C28 C29	D1 D3 D4 D5 D6 D8 D9 D12
Short answer test	s Realisation of two short writing test (not liberatory) along the term, in dates set by the Faculty of Chemistry.	hasta 15	C3 C8 C19 C20 C22	D9
Objective questions exam	For each each subject or group of subjects the student will have the opportunity of answer quiz tests through the TEM@ platform.	ata 3,75	C3 C8 C19	D3 D4
Laboratory practice	This written proof will be done in the date fixed by the Faculty of Chemistry and about the contents and skills that the student has to have purchased during the development of the laboratory practices. The questions will be situated, in some cases, in the context of some of the experiences realised by the student and, in others, will be more general. These questions will be used to evaluate the capacity to solve the problems presented.	ata 10,0	C3 C6 C8 C19 C21 C22 C28 C29	D1 D3 D4 D6 D7 D9 D12

The evaluation of the course will take into account the part mentioned above, with distinction between the theoretical and the practical parts of the subject.

Theoretical part: The evaluation will suppose, in his group (proofs (90%), problems solving (5%), quiz-tests (5%)), 75% of the final qualification of the subject. 2 proofs will be done during the course.

If the student passes the first proof (it will take place around the midle of the 4-months periode, he/she could only answer the questions related to the second part of the subject. Proofs qualification will be the average of the two proofs. When the first proof is repeated the best qualification is the only one to be used for the average,

It is required to pass the subject to obtain in the long proof a minimum qualification of 4,0 on 10,0 points. In the case of not reaching this punctuation the qualification that will reflect in the record will be not larger than 4,0.

Besides, it will be necessary to obtain an average of 2,5 in the theoretical questions of the examinations (short and long proofs). If it did not reach this punctuation the note reflected in the record will not surpass 4,0.

Practical part: The evaluation will contribute, in his group (practices of laboratory (40%), reports and oral questions(20%) and proof written of practices (40%)), 25% to the final qualification of the matter.

It is indispensable requirement to surpass the matter to obtain in the practical part a minimum qualification of 5,0 on 10 points. In the case of not reaching said punctuation the qualification that will reflect in the record will not be able to surpass 4,0.

The assistance to the practical sessions is compulsory (absences to sessions should be properly justified) and, therefore, is not possible to approve the matter in the case of not to have them realised.

Condition of presented/no presented: The realisation of the proofs, or of the proof written of practices, or the assistance to five sessions of laboratory, will involve the condition of presented/to and, therefore, the allocation of a qualification.

Second Opportunity: For the evaluation in the second opportunity, will keep the qualifications and the percentages of the problems/works proposed, of the practices of laboratory and the corresponding reports and of the quiz-tests. In the case to have an equal or upper qualification to 5,0 points in the global proof (long) or the same or upper to 4,0 in the proof written of practices, will keep said qualification (and the percentage) and only will be necessary to realise to another.

Code

- C1 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Major aspects of chemical terminology, nomenclature, units and unit conversions.
- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C9 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: characteristic properties of the elements and their compounds, including group relationships and variations in the periodic table
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C14 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules
- C20 Evaluate, interpret and synthesize data and chemical information
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- Use information and communication technologies and manage basic computer tools
- Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Laboratory practice	3	10	13

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Exhibition by part of the professor on the subject to develop, doing special emphasis in the most important appearances or of difficult understanding for the student. The professor to will use the platform Tem@ to give information on the matter or on his development.
Problem solving	They will devote two weekly hours to argue and resolve questions on the matter that previously the student will have to work.
Laboratory practices	The experiments will realise along 12 sessions of 3,5 hours each one. The student will have of the scripts of practices as well as of the material of support in the platform tem@ with the end that it can have previous knowledge of the experiments to realise. The student will have to elaborate the fascicle of laboratory during the realisation of the practices.

Personalized attention			
Methodologies	Description		
Problem solving			

Assessment				
	Description	Qualification	Lea	ng and rning sults
Problem solving	It will value the resolution by part of the student of a series of problems and/or exercises proposed in the time/condition established by the professor. The punctuation will be considered if in each one of the eliminatory proofs reaches an equal or upper qualification to 5 points on 10.	15	C1 C2 C9 C12 C14 C23	D1 D3 D4 D6 D7 D9 D13
Laboratory practices	It is compulsory the assistance to the sessions of laboratory. The professor will realise a follow-up of the experimental work realised by the student in the sessions of laboratory, as well as of the fascicle elaborated (10%). It will realise a proof that will allow to evaluate the competitions and skills purchased by the student (15%). The punctuation will be considered if in each one of the eliminatory proofs reaches an equal or upper qualification to 5 points on 10.	25	C25 C26 C27 C28	D4 D5 D6 D7 D8 D9 D12 D13 D14 D15
Essay questions exam	2 Proofs on concrete appearances of the contents explained in class and seminars. Each proof will be able to be eliminatory when the student reach a minimum qualification of 5 points on 10. To be able to approve the matter, the student will have to reach in each one of the eliminatory proofs a minimum qualification of 5 points on 10.	60	C1 D1 C2 D6 C9 D7 C12 C14 C20	

The assistance to the theoretical classes, practices of laboratory and seminars is compulsory. The participation of the student in any of the acts of evaluation of the matter will involve the condition of presented and, therefore, the allocation of a qualification. They consider acts of evaluation the assistance to the practical classes of laboratory (three or more) and the realisation of proofs. The students will be able to realise a Final Proof, that will be able to have a value of until a 60 %, in the

date of closing of evaluation of the announcement of May-June when they require: - Surpass any of the eliminatory proofs. - Go up the note of the eliminatory proofs that allow him reach the minima required to approve the matter. - Go up the note in the eliminatory proofs to improve the final note of the matter.

Announcement of Julio. The students that do not surpass the matter at the end of the cuatrimestre will have to do a proof written in the period of closing of evaluation of the announcement of July. Said proof will substitute the results of the eliminatory proofs realised along the cuatrimestre and will have a value of until a 60 %. The qualification of resolution of problems and practical of laboratory obtained to along the cuatrimestre keeps .
