General	The aim of this subject is to introduce the	main concepts of materials t	echnology as w	ell as to study
description	applications of the most common materia	ıls		-

# Competencies

Code

- B3 CG3 Knowledge in basic and technological subjects that will enable them to learn new methods and theories, and equip them with versatility to adapt to new situations.
- B4 CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
- B6 CG6 Capacity for handling specifications, regulations and mandatory standards.
- C9 CE9 Knowledge of the fundamentals of the science, technology and chemistry of materials. Understand the relationship between microstructure, the synthesis, processing and properties of materials.
- D1 CT1 Analysis and synthesis.
- D5 CT5 Information Management.
- D9 CT9 Apply knowledge.
- D10 CT10 Self learning and work.

Learning outcomes				
Expected results from this subject		Training and Learning Results		
It comprises the fundamental concepts of link, structure and microstructure of the distinct types o materials	f B3	C9	D10	
It comprises the influence of the microstructure of the material on its mechanical , electrical, thermal and magnetic behaviour	В3	C9		
It comprises the mechanical behaviour of the metallic, ceramic, plastics and composite materials.	B4			
	B6			
It knows how to modify the material properties by means of mechanical processes and thermal treatments	B4	C9	D9	
It knows the basic structural characterisation techniques for materials.	В3	C9		
	B6			
To acquire skills in the handle of the diagrams and charts	-		D1	
To acquire skills in the realisation of tests	B6	C9	D10	
It analyses the results obtained and extracts conclusions from them	-		D1	
			D5	
			D9	
It is able to apply norms of materials testing	В6		D1	
			D9	

Contents	
Topic	
Introduction	Introduction to the Science and Technology of Material. Classification of
	the materials. Terminology. Orientations for the follow-up of the matter.
Crystalline arrangement.	Crystalline and amorphous solids. Crystalline lattices, characteristics and
	imperfections. Allotropic transformations.

Properties of materials. Laboratory practices.	Mechanical, chemical, thermal, electric and magnetic properties. Standars for materials analysis. Compressive and tensile deformation. Principles of fracture mechanisms. Toughness. Hardness. Main test methods. Fundamentals of thermal analysis. Fundamentals of non-destructive esting. Introduction to metallography. Binary isomorphous and eutectic systems. Microstructure in eutectic alloys. Analyses of practical situations.
Metallic materials.	Solidification. Constitution of alloys. Grain size. Main binary phase diagrams. Processing. Carbon steels: classification and applications. Cast iron alloys. Heat treatments: ims, fundamentals and classification. Annealing, normalizing, quenching and tempering. Nonferreous alloys.
Polymers and composites	General concepts. Classification. Properties. Types of polymers. Processing. Classification of composite materials. Polymer matrix composite materials. Processing of composite materials. Problems related to polymeric and composite materials.
Ceramic materials	Structure and bonding in ceramic materials. Silicates structure. Glasses. Properties of ceramic materials. Processing of ceramic materials. Applications.

#### Other comments on the Evaluation

#### \*Evaluaci�\*n Continuous

The \*evaluaci�\*ncontinua makeà during the period of \*imparticiÃ�\*n of the subject, \*segÃ�\*nlos criteria established in the previous section and corresponds with 30% of the final note. To surpass the subject beà necessary to have reached \*unapuntuaciÃ�\*n \*mÃ�\*nima of 40% in the proof made in the date previously \*fijadapor the centre, that corresponds with 70% of the final note. Those students \*queno receive to the \*evaluaciÃ�\*n continuous (previous \*autorizaciÃ�\*n of the \*direcciÃ�\*n \*dela \*EEI) beÃ\*n evaluated with a final examination on the contents of \*latotalidad of the matter, that \*supondrà 100% of the note.

# Examination of Julio (2\*� \*Edici�\*n)

In the examination \*deJulio \*tendrà in account the \*evaluaciÃ�\*n continuous (VÃ\*lida only in the course 2019-20). The examination \*tendrà the same \*caracterÃ�\*sticasque the previous and makeà in the previously fixed date by the centre. Those students \*quequieran renounce to the \*evaluaciÃ�\*n continuous beÃ\*n evaluated with an examination \*finalsobre the contents of the whole of the matter (\*teorÃ�to + \*prÃ\*ctica) \*quesupondrà 100% of the note.

# **Extraordinary examination**

Examination on \*loscontenidos of the whole of the matter (\*teor�to + \*prÃ\*ctica) that \*supondrà 100% of the note.

#### **Commitment �\*tico:**

It expects that the present student a behaviour  $\tilde{\mathbb{A}}$ \*tico suitable. In \*casode detect a behaviour no  $\tilde{\mathbb{A}}$ \*tico (copy, plagiarism, \*utilizaci $\tilde{\mathbb{A}}$ \*n of \*aparatoselectr $\tilde{\mathbb{A}}$ \*nicos unauthorised, etc.), consider $\tilde{\mathbb{A}}$  that the student no \*re $\tilde{\mathbb{A}}$ \*ne \*losrequisitos necessary to surpass the matter. In this case, the \*calificaci $\tilde{\mathbb{A}}$ \*nglobal in the present course \*acad $\tilde{\mathbb{A}}$ \*mico be $\tilde{\mathbb{A}}$  of suspense (0.0).

No allowà the \*utilizaciÃ�\*n of \*ningÃ�\*n device \*electrÃ�\*nico \*durantelas proofs of \*evaluaciÃ�\*n, except \*autorizaciÃ�\*n expresses. The fact of \*introducirun device \*electrÃ�\*nico unauthorised in the classroom of examination beà \*consideradomotivo of no \*superaciÃ�\*n of the matter in the present course \*acadÃ�\*mico and \*lacalificaciÃ�\*n global beà of suspense (0.0).

Contents	
Topic	
SUBJECT 1. INTRODUCTION And AXIOMS	1.1 Magnitudes and units.
	1.2 References of polarity.
	1.3 Concept of electrical circuit.
	1.4 Axioms of Kirchhoff.
SUBJECT 2. ANALYSIS OF LINEAR CIRCUITS	2.1 Ideal Elements: definition, representation and mathematical model.
RESISTIVES	2.2 Models of real sources.
	2.3 Equivalent Dipoles: conversion of sources.
	2.4 Association of resistors: concept of voltage divider and current divider.
	2.5 Association of sources and resistors.
	2.6 Topological Concepts: knot, branch, bow and mesh.
	2.7 Number and election of circular and nodal equations linearly
	independent.
	2.8 Analyses by meshes and knots of circuits with resistors.
	2.9 Topological Transformations.
	2.10 Power and energy in resistors, ideal sources and real sources.
	2.11 Fundamental theorems.

SUBJECT 3. ANALYSIS OF CIRCUITS WITH ELEMENTS THAT STORE ENERGY	3.1 ideal Condenser: definition, representation and mathematical model. 3.2 magnetic Circuits: units, magnetic flow, strength magnetomotive and reluctance.
	3.3 ideal Coil: definition, representation and mathematical model.
	3.4 Association series and parallel of coils and capacitors.
	3.5 Circuits with elements that store energy. Circuits RL, RC and RLC.
SUBJECT 4 ANALYSIS OF CIRCUITS IN SINUSOIDA	L4.1 Forms of periodic wave and values associated: sinusoidal wave.
STEADY-STATE REGIME	4.2 Determination of the sinusoidal steady-state regime.
	4.3 Response of the basic passive elements to sinusoidal excitations:
	concept of impedance and complex admittance.
	4.4 Law of Ohm and axioms of Kirchhoff in sinusoidal steady-state regime.
	4.5 Association of elements.
	4.6 Analyses by knots and by meshes of circuits in sinusoidal steady-state
	regime.
	4.7 Power and energy in sinusoidal steady-state regime. Instantaneous
	power, half or active power and energy in the passive elements: coils,
	capacitors, resistances and complex impedances.
	4.8 Power and energy in the dipoles. Apparent power, reactive power and
	complex power.
	4.9 Theorem of conservation of the complex power (theorem of
	Boucherot).
	4.10 The power factor and his importance in the electrical systems.
	Correction of the power factor.
	4.11 Measurement of the active and reactive power: wattmeters and
	varmeters.
CUDIFICE E. MACNIETIC ADMICTMENTS	4.12 Fundamental Theorems in sinusoidal steady-state regime.
SUBJECT 5: MAGNETIC ADJUSTMENTS	5.1 Magnetic joined up coils: definitions, equations of flows, own and mutual inductances. Representations and mathematical models.
	5.2 Analyses by meshes of circuits of alternating current with coils joined
	up.
SUBJECT 6:	6.1 Introduction. Three-phase voltage system. Sequence of phases.
BALANCED THREE-PHASE SYSTEMS	6.2 Generators and three-phase loads: star and triangle connections.
	Voltages and currents.
	6.3 Equivalent transformations star-triangle.
	6.4 Analyses of balanced three-phase systems. Equivalent single-phase
	circuit.
	6.5 Power in balanced three-phase systems. Compensation of the power
	factor.
SUBJECT 7. ELECTRICAL MACHINES	7.1 Transformer and autotransformers.
	7.2 Rotational electrical machines: synchronous machine, asynchronous
	machine and DC machines.
PRACTICES	1. Use of lab equipments.
	2. Measures in resistive circuits.
	<ol><li>Introduction to the analysis and simulation of circuits by means of Matlab.</li></ol>
	4. Determination of a linear model of a real coil with core of air. Real coil
	with core of iron. Cycle of magnetic hysteresis.
	5. Simulation of transient regime by means of Matlab.
	6. Measures of active and reactive power in monophase systems.
	Compensation of the power factor.

Planning			
	Class hours	Hours outside the classroom	Total hours
Laboratory practical	18	9	27
Problem solving	10	10	20
Autonomous problem solving	0	23	23
Lecturing	22	44	66
Essay questions exam	4	0	4
Practices report	0	10	10
·			

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Laboratory practical	It will be performed circuit assembly corresponding to the knowledges acquired in class of theory, or it will be seen in the laboratory complementary aspects not treated in the theoretical classes.

Problem solving	It will solved type problems and exercises in class of big groups and the student will have to solve
	similar exercises.
Autonomous problem	The student will have to solve on his own a series of exercises and questions of the matter
solving	proposed by the professor.
Lecturing	The professor will explain in the classes of big groups the contents of the matter.

Personalized assistance		
Methodologies	Description	
Laboratory practical	The professor will attend personally the doubts and queries of the students during the tutorial hours.	
Problem solving	The professor will attend personally the doubts and queries of the students during the tutorial hours.	

	Description	Qualification	Training	and
	•	`	Learn Resu	ing
Essay questions exam	They will realise a 'written final exam' that will cover the full contents of the subject.	80	B3 C10	D2 D10 D14
Practices report	It will be valued positively the realisation of a memory of each one of the practices of laboratory that will include: objectives, procedure followed, materials employed, results obtained and interpretation of them. The realisation of practices and the presentation of the memories are part of the process of continuous evaluation of the student. However, the students that have not realised the practices along the course, or wish to improve the mark obtained, will be able to opt to realise an additional written exam with questions regarding the development of the practices and to the educational contents explained during them. The value of this exam is the 20% of the final mark, in the same way as the continuous evaluation.	20	C10	D2 D6 D10 D14 D17

#### Other comments on the Evaluation

For the second opportunity of June-July it is kept the qualification in the continuous evaluation obtained during the own course, without prejudice that, to the equal that at the earliest opportunity of December - January, can be surpassed by the realisation of the written exam additional that is proposed to this effect.

Each new enrolment in the subject supposes to put a zero the qualifications in the activities of continuous evaluation obtained in previous courses.

#### Ethical commitment:

It expects that the student presents a suitable ethical behaviour. In the case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, for example) it will be considered the student does not gather the necessary requirements to surpass the matter. In this case the global qualification in the present academic course will be of suspense (0.0).

It will not be allowed the utilisation of any electronic device during the proofs of evaluation except with explicit permission. The fact to enter an unauthorised electronic device in the classroom of examination will be considered reason of no surpass the matter in the current academic course and the global qualification will be of suspense (0.0).

Responsible professor: DANIEL VILLANUEVA TORRES

# **Complementary Bibliography**

# Recommendations

# **Other comments**

It is very recommended that the students have sufficient knowledge of the algebra of the complex numbers, linear algebra, linear differential equations and have attended to the subject of Physics along the whole first course. Requirements: To enrol in this matter it is necessary to have surpassed or be enrolled of all the matters of the inferior courses to the course in which it is situated this matter.

Problem solving	Group or individual tutorials will be held during office hours to strengthen the acquired knowledge and to guide and assess the proposed works/papers.		
Laboratory practica	Group or individual tutorials will be held during office hours to strengthen the acquired knowledge and to guide and assess the proposed works/papers.		

Assessment			
	Description	Qualification	Training and Learning Results
Laboratory practical	Attendance and participation as well as practices reports, papers, and tests will be rated. However, to be evaluated, students must attend a minimum of 7 practice sessions; otherwise, students won to be evaluated and will get 0 points.  Learning outcomes: all will be graded	20	
Essay questions exam	Final and mid-term tests will be focused on the contents taught at classes and laboratory sessions.  Learning outcomes: all will be graded.	80	

# Other comments on the Evaluation

Students must achieve a 5 or higher grade\* to pass the subject, following these rules:

- Students are required to attend and utilized the laboratory/Computer room. Practices reports, papers, and tests for
  each practice session as well as proposed works/papers from tutorials will be evaluated and graded with a maximum
  of 2 points of the final grade. This grade will be kept for the second term in the student sevaluation records (July).
  To be evaluated, students must attend a minimum of 7 practice sessions; otherwise, students won to be evaluated
  and will get 0 points.
- 2. For those students who have been officially granted the right to waive their continued evaluation, there will be a mandatory final test where they will be able to get a maximum grade of 2 points. However, an advanced request must be made to the professor to prepare the necessary materials for this test.
- 3. The final test will have a maximum grade of 8 points.

Ethical commitment: An adequate ethical behaviour of the student is expected at all times. In case an unethical behaviour is detected (copying, plagiarism, unauthorized use of electronic devices, and others); the student will be considered unfit to meet the necessary requirements to pass the subject. In this case, the overall qualification in the current academic year will be a Fail grade (0.0).

The use of any electronic devices during tests is completely forbidden unless is specified and authorized. The fact of introducing unauthorized electronic devices in the examination room will be considered reason enough to fail the subject in

<sup>\*</sup> Grades are calculated using a system of numerical qualification from 0 to 10 points conforming to the Spanish current legislation (RD 1125/2003, 5 September; BOE 18 September).

the current academic year and the overall qualification will be a Fail grade (0.0).

Tests Schedule: This information can be found along with any updates at the center (university) webpage.

Topic	
1. Introduction the industrial automation.	<ol> <li>1.1 Introduction to automation of tasks.</li> <li>1.2 Types of control.</li> <li>1.3 The programmable logic controller.</li> <li>1.4 Diagram of blocks. Elements of the programmable logic controller.</li> <li>1.5 Cycle of operation of the programmable logic controller. Time of cycle.</li> <li>1.6 Ways of operation.</li> </ol>
2. Introduction the programming of programmable logic controllers.	<ul> <li>2.1 Binary, octal, hexadecimal and BCD systems. Real numbers.</li> <li>2.2 Addressing and access to periphery.</li> <li>2.3 Instructions, variables and operands.</li> <li>2.4 Forms of representation of a program.</li> <li>2.5 Types of modules of program.</li> <li>2.6 Linear and structured programming.</li> </ul>
3. Programming of programmable logic controllers with I/O.	<ul> <li>3.1 Binary variables. Inputs, outputs and memory.</li> <li>3.2 Binary combinations.</li> <li>3.3 Operations of allocation.</li> <li>3.4 Creation of a simple program.</li> <li>3.5 Timers and counters.</li> <li>3.6 Arithmetical operations.</li> <li>3.7 Examples.</li> </ul>
4. Modelling of systems for the programming of programmable logic controllers .	<ul> <li>4.1 Basic principles. Modelling technics.</li> <li>4.2 Modelling by means of Petri Networks.</li> <li>4.2.1 Definition of stages and transitions. Rules of evolution.</li> <li>4.2.2 Conditional election between several alternatives.</li> <li>4.2.3 Simultaneous sequences. Concurrence. Resource shared.</li> <li>4.3 Implementation of Petri Networks.</li> <li>4.3.1 Direct implementation.</li> <li>4.3.2 Normalised implementation (Grafcet).</li> <li>4.4 Examples.</li> </ul>

5. Basic concepts of automatic control. Representation and modelling of continuous systems.	<ul> <li>5.1 Systems of regulation in open loop and closed loop.</li> <li>5.2 Control typical loop. Nomenclature and definitions.</li> <li>5.3 Physical systems and mathematical models.</li> <li>5.3.1 Mechanical systems.</li> <li>5.3.2 Electrical systems.</li> <li>5.3.3 Others.</li> <li>5.4 Modelling in state space.</li> <li>5.5 Modelling in transfer function. Laplace transform. Properties.</li> <li>Examples.</li> <li>5.6 Blocks diagrams</li> </ul>
6. Analysis of dynamic systems.	5.6 Blocks diagrams. 6.1 Stability. 6.2 Transient response. 6.2.1 First order systems. Differential equation and transfer function. Examples. 6.2.2 Second order systems. Differential equation and transfer function. Examples. 6.2.3 Effect of the addition of poles and zeros. 6.3 Systems reduction. 6.4 Steady-state response. 6.4.1 Steady-state errors. 6.4.2 Input signals and system type. 6.4.3 Error constants.
7. Controllers and parameters tuning.	<ul> <li>7.1 Basic control actions. Proportional effects, integral and derivative.</li> <li>7.2 PID controller.</li> <li>7.3 Empirical methods of tuning of industrial controllers.</li> <li>7.3.1 Open loop tuning: Ziegler-Nichols and others.</li> <li>7.3.2 Closed loop tuning: Ziegler-Nichols and others.</li> <li>7.4 Controllers design state space. Pole assignment.</li> </ul>
P1. Introduction to STEP7.	Introduction to the program STEP7, that allows to create and modify programs for the Siemens PLC S7-300 and S7-400.
P2. Programming in STEP7.	Modelling of simple automation system and implementation in STEP7 using binary operations.
P3. Implementation of PN in STEP7.	Petri Networks modelling of simple automation system and introduction to the implementation of the same in STEP7.
P4. PN Modelling and implementation in STEP7.	Petri Networks modelling of complex automation system and implementation of the same in STEP7.
S7-Graph.	Petri Networks normalised modelling and implementation with S7-Graph.
P6. Control systems analysis with MATLAB.	Introduction to the control systems instructions of the program MATLAB.
P7. Introduction to SIMULINK.	Introduction to SIMULINK program, an extension of MATLAB for dynamic systems simulation.
P8. Modelling and transient response in SIMULINK.	Modelling and simulation of control systems with SIMULINK.
P9. Empirical tuning of an industrial controller.	Parameters tuning of a PID controller by the methods studied and implementation of the control calculated in an industrial controller.

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies		
	Description	
Lecturing	These sessions will be held in the rooms and dates fixed by the direction of the school. They will consist in an oral explanation by the professor of the most important parts of the course, all related with the materials that the student had to work previously. This is intended to favor the active participation of the students, that will have occasion to rise doubts and questions during the sessions. Active participation is desired during all the sessions.	
Problem solving	During these sessions, in the classroom, interleaved with the lectures, the professor will proceed to solve examples and/or exercises that properly illustrate the problems to solve. As long as the number of participants in the classroom allows, active participation will be promoted.	
Previous studies	Previous preparation of the theoretical sessions:	
	Prior to the start of the theoretical sessions, the students will have available a series of materials that have to prepare, as the sessions will relay on them.	
	Previous preparation of the laboratory sessions:	
	It is mandatory that the students make all the assigned previous tasks prior to access the laboratory. These task are intended to greatly improve the laboratory knowledge acquisition. The achieved report will be taken into account when the laboratory session is to be evaluated.	

Autonomous problem solving	Self study and review of the theoretical sessions for knowledge consolidation: The student must study, in a systematic time schedule, after each lecture session, in order to dissipate any doubts. Any doubts or unsolved questions will have to be expose to the professor as soon as possible in order to enhance the feedback of the learning process.
Laboratory practical	Laboratory sessions will be held in the time schedule established by the school's head teacher.  Students will work in groups of two students each. The sessions will be supervised by a professor, who will control the assistance and will also evaluate the harnessing of it. During the laboratory sessionsthe students will make activities of the following kinds:  - Assembling electronics circuits  - Use of electronic instrumentation  - Measure of physical variables on circuits  - Do calculations related to the circuit and/or the measurements  - Collect data and represent it (diagrams, charts, tables)  At the end of each laboratory session each group will deliver the corresponding score sheets.

Laboratory practical Tutoring Sessions: During the established schedule of each professor, students will be able to speak

freely about course issues with the professor. Also the will receive orientation and academic support,

	if needed. Email: The students also will be able to request orientation and to the professors of the course. This way of attention is advisable for indica punctual type.			
Assessment				
	Description	Qualification	Trainin Learr Resu	ing
Laboratory practical	Assessment of the laboratory sessions:  The laboratory sessions will be evaluated in a continuous way, on each session. The applied criteria are:	. 20	C11	D9 D10 D17
	<ul> <li>- A minimum attendance of 80%</li> <li>- Punctuality</li> <li>- Previous task preparation of the sessions</li> <li>- Make the most of the session</li> </ul>			
	The practical sessions will be held in groups of two students. The documents of the practices will be available prior to the sessions. The students will fill report, that will be delivered when the session ends. This report serves to justify both the attendance and how they have done the work asked for.			
Objective questions exam	Evaluation of Blocks of Topics: This part is intended to emphasize the self learning process and provide feedback to the students. It's main aim is to provide honest and objective information about the learning process. These individual exams will be held by electronics means, if possible. It can consists on a wide set of test questions, short answers and analytical numerical problems.	20	B3 C11	D2 D9 D10
Essay questions exam	Individual Exam: It will consist on an individual written exam near the end of the semester, in the dates established by the head teachers. The exam will be a combination of any of the following types of exercises:  - Test Questions - Short Answer Questions - Analysis Problems - Practical Cases	60	B3 C11	D2 D9 D10

# Other comments on the Evaluation

Personalized assistance

**Description** 

**Methodologies** 

### Evaluation:

All the students will be evaluated of continuous way by means of the following procedure:

Along the semester the students will realise several partial proofs and will obtain a note by each proof. The note of partial (NP) will obtain of the average of the notes of the proofs.

Also the long of the semester the students will do practices of laboratory and will obtain a note by each practice. The sessions without assistance will be marked with a zero. The note of laboratory (NL) will obtain of the average of the notes of

the practices, with the following exceptions:

- a) If the assistance to the sessions of practices is inferior to 80% the total note of the same (NL) will be zero.
- b) If the average of the notes obtained in the partial proofs (\*NP) is inferior to 3,33, the note of laboratory (NL) will be zero.

Also along the semester partial exams will be made. Each partial exam will have a grade. The grade of these exams (NP) is the average of the grades in each one.

The qualification of continuous evaluation (CC) procedure will be calculated with this formula:

$$CC = 0.8 \times NP + 0.2 \times NL$$

The students can opt to that qualification CC becomes the qualification in records (CA), without need to take any additional exam, as long as they fulfil all the following requirements:

- a) The average grade of the partial exams (NP) must be great or equal than 6,25 points.
- b) The grade obtained in all the partial exams must be at least 3,75 points.
- c) Obtain a laboratory grade (NL) great or equal to 7 points.

A final exam (EF) will be held in scheduled dates in June and July.

The grades in records (CA) for those students that do not want to or can not opt to the note of continuous qualification method will be obtained with arrangement to the following formula:

$$CA = 0.2 \times NP + 0.2 \times NL + 0.6 \times EF$$

For the present academic year, grades NL and NP obtained in the previous two academic courses are still valid with the following exceptions:

- Those students that want to use the previous NL grade with less than 7 points can not apply for the continuous evaluation procedure, and must pass the final exam (EF)
- Those student that want to use the previous NP grade can not apply for the continuous evaluation procedure, and must pass the final exam (EF)
- -Those students that attend any laboratory session along the academic year can not opt to keep valid the laboratory qualification from the previous academic years.
- -Those students that take any partial test along the academic year can not opt to keep valid the partial test qualification from the previous academic years.

Those students granted with an exemption from the school direction not to take part on the continuous evaluation process, will be evaluated at the same day and time established by the school direction board, in the following way:

- A two part test
- 1- A written exam identical to the final examination, with a weight of 70% on the final grade and lasting a maximum of two hours.
- 2- A specific laboratory test, with a weight of 30% on the final grade and lasting a maximum of two hours. This take will take place immediately after the written exam in the laboratories of the same school.

In the final year examination, students will take a written exam that will weigh 70% on the final grade. The remaining 30% will be obtained from the qualification of a laboratory test.

To pass the course, in any of the previous cases, it is necessary to achieve a final grade equal or higher than 5 points.

#### Recommendations:

It is <u>very important</u> that the students keep updated the profile in the FAITIC platform. All communications related with this course will be made through this platform. All individual communications will be made through the email listed in this platform.

The students can solve doubts related with the laboratory previous activities in the personal attention hours (tutoring time), or by any other contact procedure available in FAITIC.

The students must meet the deadlines for all the activities.

All the achieved results must be justified, in any of the exams or activities. None of the achieved results will be taken for good if no explanation is given about the method used to find them. The selected method for solving a problem is considered when grading the solution.

When writing the solutions and answers in reports and tests, avoid spelling mistakes and unreadable symbols.

Exams lacking some of the sheets will not be graded.

Use of cell phones, notes or books is forbidden during exams.

Competencies Acquisition and Its Influence on Assesments

In this subject all the different activities are designed to assess the students in the competencies, and the acquisition of the competencies defines the final mark. Here follows a description of how the competencies and activities are related. CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.

The acquisition of this competency is provided by the contents of the topics of the subject. All activities of self-assessment, the laboratory sessions and the different test are elaborated to evaluate the knowledge of the technical subjects. CE11 Knowledge of the fundamentals of electronics.

This competency is warrant to be acquired along all the lectures, the laboratory sessions, the self-assessment activities andt he tests.

CT2 Problems resolution.

The students will exercise this competency by means of the following activities: self-assessment activities, bulletin of problems and previous theoretical solution of experiments to be made at the laboratory. This competency is also acquired along all thetest (for each block and the individual one), as they mainly are composed by problems to be solved.

# CT9 Apply Knowledge

This competency is mainly acquired during the laboratory sessions, where the theoretical knowledge from problems, designs and simulations should match the assembly of circuits and real measures. Laboratory sessions are evaluated one by one, scoring an average of marks, if there is a minimum number of attended sessions with a minimum score.

#### CT10 Self learning and work

The self learning process is fundamental to achieve the score to approve the subject. In order to motivate students in the task of acquiring the theoretical knowledgeneed, self-assessment test (on line), lectures based on the remote learningplatform (faitic) and bulletins of problems have been created. Theself-assessment test also provide feedback to the professors about the main difficulties found by students. On thelaboratory sessions, the previous preparation is an explicit method of evaluation. In order to made this preparation, each of the laboratory sessions has its specific documentation and tutorials.

#### CT17 Working as a team

The students exercise this competency at the laboratory sessions, by making teamsof two people. Cooperation in most of the sessions is needed to perform the assembly of circuits, make the measurements and take notes. The professor in charge of the laboratory session verifies the previous work and how each session is going along, watching that both members cooperate to achieve the best possible result. Scores for students can be different if the professor detects that one of the team member is not cooperating.

General	The educational aims of Foundations of Systems and				
description	descriptive appearances, centre in the study and the application of scientific knowledges and technicians				
	related with the processes of manufacture of components and conjoint whose functional purpose is mechanical				
	as well as the evaluation of his dimensional precision and the one of the products to obtain, with a determinate				
	quality. All this including from the phases of preparation until the ones of utilisation of the instruments, the tools, toolings, teams, machines tool and necessary systems for his realisation, in accordance with the norms				
			alisation, in acco	ordance with the norms	
	and specifications established, and applying criteria of	of optimisation.			
	To reach the aims mentioned will give the following the	hematic educatior	nal:		
	- Foundations of dimensional metrology. Measure of length, angles, forms and elements of machines.				
	- Study, analysis and evaluation of the dimensional tolerances. Chain of tolerances. Optimisation of the				
	tolerances. Systems of adjust and tolerances.				
	- Processes of conformed of materials by means of start of material, operations, scheme, teams and tooling				
	- Processes of conformed by means of plastic deformation, operations, scheme, teams and tooling				
	- Processes of conformed by *moldeo, operations, scheme, teams and tooling				
	- Processes of conformed no conventional, operations, scheme, teams and tooling.				
	Conformed of polymers, and other no metallic mate			and taoling	

# Competencies

Code

Learning outcomes	
Expected results from this subject	Training and Learning Results

Conformed of polymers, and other no metallic materials, operations, scheme, teams and tooling
 Processes of union and assembling, operations, scheme, teams and tooling
 Foundations of the programming of scheme with \*CNC, used in the mechanical manufacture.

Contents	
Topic	
DIDACTIC UNIT 1.	Lesson 1. INTRODUCTION To THE ENGINEERING OF *FABRICACION.
INTRODUCTION To THE TECHNOLOGIES And	The productive cycle. Classification of industries. Technologies of
SYSTEMS OF MANUFACTURE.	manufacture.

DIDACTIC UNIT 2. \*METROTECNIA.

Lesson 2. PRINCIPLES OF DIMENSIONAL METROLOGY.

Introduction. Definitions and concepts. The International System of Units. Physical magnitudes that covers the Dimensional Metrology. Elements that take part in the measurement. Classifications of the methods of measure. Patterns. The chain of \*trazabilidad. \*Calibración. Uncertainty. Chain of \*calibración and transmission of the uncertainty. Relation between tolerance and uncertainty. Expression of the uncertainty of measure in \*calibración.

Lesson 3. INSTRUMENTS And METHODS OF MEASURE. Introduction. Patterns. Instruments of verification. Patterns \*interferométricos. Principles of \*interferometría. Instruments of direct measure. Methods and instruments of indirect measure.

Lesson 4. MEASUREMENT BY COORDINATES. MEASUREMENT BY IMAGE. SUPERFICIAL QUALITY.

Machines of measurement by coordinates. Concept. Principles of the MMC. Classification of the machines. Main components of the MMC. Process to be followed for the development of a measure. Systems of measurement by image. Superficial quality. Methods of measure of the \*rugosidad. Parameters of \*rugosidad.

DIDACTIC UNIT 3.
PROCESSES OF CONFORMED BY START OF
MATERIAL

Lesson 5. INTRODUCTION To THE CONFORMED BY START OF MATERIAL. Introduction. Movements in the process of start of material. Factors to take into account in the election of the tool. Geometry of tool. Materials of tool. Mechanism of training of the shaving. Types of shavings. Power and strengths of court. Wear of tool. Criteria of wear of tool. Determination of the life of the tool. Flowed of court.

Lesson 6. TURNING: OPERATIONS, SCHEME And TOOLING. Introduction. Main operations in lathe. The machine-tool: the lathe. Main parts of the lathe. Setting or subjection of pieces. Typical tools of the lathe. Special lathes.

Lesson 7. MILLED: OPERATIONS, MACHINES And TOOLING. Introduction. Description and classification of the operations of milled. Parts and main types of \*fresadoras. Types of strawberries. Setting of the tool. Subjection of pieces. Different configurations of \*fresadoras. \*Fresadoras Special.

Lesson 8. MECHANISED OF HOLES And WITH RECTILINEAR MAIN MOVEMENT: OPERATIONS, MACHINES And TOOLING. Introduction to the operations of mechanised of holes. Punches. \*Mandrinadoras. General characteristics of the processes of mechanised with rectilinear main movement. \*Limadora. \*Mortajadora. \*Cepilladora. \*Brochadora. Saws.

Lesson 9. CONFORMED WITH ABRASIVE: OPERATIONS, MACHINES And TOOLING.

Introduction to the operations of mechanised of holes. You grind abrasive. Operation of rectified. Types of \*rectificadoras. \*Honeado. \*Lapeado. Polishing. Burnished. \*Superacabado

Lesson 10. PROCESSES OF MECHANISED NO CONVENTIONAL. Introduction. The mechanised by electroerosion or \*electro-download. Mechanised electrochemical. Mechanised by laser. Mechanised by \*chorro of water. Court by arch of plasma. Mechanised by ultrasounds. Milled chemist.

DIDACTIC UNIT 4. AUTOMATION And MANAGEMENT OF THE PROCESSES OF MANUFACTURE. Lesson 11. NUMERICAL CONTROL OF MACHINES TOOL.
Introduction. Advantages of the application of the \*CN in the machines tool. Necessary information for the creation of a program of \*CN. Manual programming of \*MHCN. Types of language of \*CN. Structure of a program in code ISO. Characters employed. Preparatory functions (G\_\_). Auxiliary functions (M\_\_). Interpretation of the main functions. Examples. Automatic programming in numerical control.

# DIDACTIC UNIT 5. PROCESSES OF CONFORMED OF MATERIALS IN LIQUID STATE AND GRANULATE.

Lesson 12. GENERAL APPEARANCES OF THE CONFORMED BY FOUNDRY OF METALS.

Introduction. Stages in the conformed by foundry. Nomenclature of the main parts of the mould. Materials employed in the conformed by foundry. Flow of the fluid in the system of feeding. Solidification of the metals. Contraction of the metals. The \*rechupe. Procedure of calculation of the system distribution of \*colada. Considerations on design and defects in pieces melted.

# Lesson 13. PROCESSES OF MANUFACTURE BY FOUNDRY.

Classification of the processes of foundry. \*Moldeo In sand. \*Moldeo In shell. \*Moldeo In plaster. \*Moldeo In ceramics. \*Moldeo To the CO2. \*Moldeo To the stray wax

Foundry in full mould. \*Moldeo \*Mercast. \*Moldeo In permanent mould. Foundry injected. Foundry \*centrifugada. Ovens employed in foundry.

Lesson 14. METALLURGY OF DUSTS (\*PULVIMETALURGIA). Introduction. Manufacture of the metallic dusts. Characteristics and properties of the metallic dusts. Dosage and mix of metallic dusts. \*Compactación. \*Sinterizado. Ovens of sintering. \*Sinterizado By download \*disruptiva. \*Presinterizado. Back operations. Considerations of design. Products \*obtenibles by sintering.

#### Lesson 15. CONFORMED OF PLASTICS.

Introduction. Polymeric material classification. Physical properties of polymers. Classification of the processes. \*Moldeo By extrusion. \*Moldeo By injection. \*Moldeo By compression. \*Moldeo By transfer. \*Moldeo Rotational. \*Termoconformado.

#### DIDACTIC UNIT 6.

PROCESSES OF CONFORMED BY UNION.

# Lesson 16. PROCESSES OF WELDING.

Introduction to the processes of welding. Welding with electrical arch. Welding by resistance. Welding with oxygen and gas fuel .Welding with temperature of fusion of metal of lower contribution that the one of the metals to join.

Lesson 17. PROCESSES OF UNION And SETTING WITHOUT WELDING. Processes of union by means of adhesive. Resistance to the adhesion. Conditions for the hit. Design of unions Types of adhesive according to origin and composition. Processes of mechanical union. Removable mechanical unions and permanent.

# DIDACTIC UNIT 7. PROCESSES OF CONFORMED BY PLASTIC DEFORMATION OF METALS.

Lesson 18. GENERAL APPEARANCES OF THE CONFORMED BY PLASTIC DEFORMATION.

Introduction. Curves of effort-deformation. Expressions of the deformation. Proof of the volume. Approximate models of the curve encourage real-natural deformation. State of flat deformation. Primary and secondary processes. Processes of work in hot and in cold. Conditions and control of the process.

### Lesson 19. PROCESSES OF \*LAMINACIÓN And FORGES.

\*Laminación: Foundations; temperature of \*laminación; teams for the \*laminación in hot; characteristics, quality and tolerances of the products \*laminados in hot; \*laminación in cold. It forges: free; in matrix of impression; in press; by \*recalcado; header in cold; by \*laminación; in cold.

### Lesson 20. EXTRUSION, \*EMBUTICIÓN And AFFINE.

Extrusion. Pulled of bars and tubes. \*Trefilado. Reduction of section. \*Embutición. \*Repujado In lathe. Attainable pieces by \*repujado: considerations of design. Forming by pulled. Forming with pads of rubber and with liquid to pressure. Forming to big power.

# Lesson 21. CONFORMED OF METALLIC SHEET.

\*Curvado Or bent of sheets. \*Curvado With rollers. Conformed with rollers. \*Enderezado. \*Engatillado. Operations of cut of sheet.

#### PROGRAM OF PRACTICES

Practice 1.- Utilisation of the conventional devices of metrology.

Measurement of pieces using foot of normal king and of depths and micrometer of outsides and inner. Employment of clock comparator.

\*Comprobación Of flat surfaces. Use of calibrate raisin/does not happen, rules, squares and \*calas pattern. Measurement and \*comprobación of threads. Realisation of metric measurements and in English units.

Practice 2.-Indirect measurements.

\*Comprobación Of a cone using rollers and a foot of king, measurement of a tail of \*milano using rollers, measurement of the angles of a double tail of \*milano and measurements using a rule of breasts. Direct measurements with goniometer.

Practice 3.- Machine of measurement by coordinates.

Establish a system of coordinates. Check measures in piece, using a machine to measure by coordinates. Verify tolerances forms and position. Practice 4.- Manufacture with machines conventional tools.

Manufacture of a piece employing the lathe, the \*fresadora and the \*taladro conventional, defining the basic operations and realising them on the machine.

Practice 5.- Selection of conditions of computer-aided court.

Realisation of leaves of process of three pieces using program of planning of Practical computer-aided

processes 6, 7 and 8.- Initiation to the numerical control applied to the lathe and to the \*fresadora.

Realisation of a program in \*CNC using a simulator, with the main orders and simpler; realising at the end diverse pieces so much in the lathe as in the \*fresadora of the classroom workshop.

Practice 9.- Welding.

Knowledge of different teams of electrical welding. \*Soldeo Of different materials employed the technicians of electrode \*revestido, \*TIG and \*MIG.

Methodologies	
	Description
Lecturing	Las clases teóricas se realizarán combinando las explicaciones de pizarra con el empleo de vídeos y presentaciones de ordenador. La finalidad de estas es complementar el contenido de los apuntes, interpretando los conceptos en estos expuestos mediante la muestra de ejemplos y la realización de ejercicios.
Laboratory practical	Las clases prácticas de laboratorio se realizarán en 9 sesiones de 2 horas, salvo los alumnos del curso puente que realizarán las prácticas en las 6 sesiones que contempla su horario particular, en grupos de 20 alumnos máximo, y empleando los recursos disponibles de instrumentos y máquinas, combinándose con las simulaciones por ordenador.

Objective questions exam

It TESTS TYPE To (for all the students -60% final note-)

The character of this proof is written and face-to-face, is compulsory for all the students, with or without continuous evaluation.

It will be composed this proof by 20 ask type test on the theoretical and practical

The assessment of tests it type test will realise in a scale of 6 points, what represents 60% of the total note, being necessary to obtain at least 2 points, so that together with the practical proofs can obtain at least 5 points and surpass the matter The note of this test will obtain adding 0,3 points by each properly answered question and will subtract 0,1 points if the question is resolved of wrong form. The questions in white

do not mark.

Laboratory practice

It TESTS TYPE \*B (continuous evaluation -30% final note-):

Two test type test to realise in the schedule of class, consistent in 5 questions on the matter given until the moment, each correct question will cost 0,3 points and the wrong will subtract 0,1 points. The questions in white do not mark. Each proof will be therefore 15% of the final note.

40

60

It TESTS TYPE C (continuous evaluation -10% final note-):

A proof written or work to propose by the professor along the \*cuatrimestre. This proof will value with a maximum of 1 point, 10% of the final note. These notes will add to the qualification of tests it type test, to be able to obtain at least 5 points and surpass the matter.

It TESTS TYPE (renunciation to the continuous evaluation -40% final note-): Resolution of several practical problems, whose value will be 40% of the final note, or was at most 4 points, being necessary to obtain a minimum of 1 point in this second proof so that the qualification can add to the one of tests it type test, and if it equalises or surpasses 5 points, approve the matter.

This tests type D, will realise it the students to which have conceded them the renunciation to the continuous evaluation, and will realise the same day that realise tests it compulsory test, after this have finalised.

# Other comments on the Evaluation

APPROVED<\*p>Students described by means of continuous evaluation:<\*p>To surpass this matter is necessary at least obtain 5 points adding the punctuation of test them types ||To||, ||\*B|| and ||C||. </\*p><\*p>All thestudents in principle will have to follow the procedure of continuous evaluation, except those that on purpose renounce in the term and form that mark the school. </\*p><\*p>&\*nbsp;Students described with renunciation conceded to the continuous evaluation: them types [To] and [D].</\*p><\*p>ASSISTANCE To PRACTICAL CLASSES</\*p><\*p>The assistance to practical classes is not compulsory, but will be always matter of examination the in them given. EDITION</\*p><\*p>Students with continuous evaluation, qualification in the announcement of 2º edition: </\*p><\*p>&\*nbsp;This second edition of the ordinary announcement will describe as the following way: </\*p><\*p>- By means of the realisation of the compulsory proof type  $\Box To \Box </*p>-conserve$  the qualifications of the two test type  $\sqcap^*B\sqcap$  in this  $2^a$  opportunity, but will be able to . if it wishes, improve this qualification, by means of the repetition of these test type []\*B[] when finalising tests it type []To[].</\*p>- Will keep the punctuation reached in tests it type []C[] by maximum value of 1 point, but will be able to improve this note if it wishes by means of a proof written or work to propose by the professor, to deliver before the day of the announcement of this second edition. </\*p><\*p>To surpass this matter is necessary at least obtain 5 points adding the three previous proofs. evaluation, corresponding to 40% of the final qualification, will not conserve of a course for another. without continuous evaluation, qualification in the announcement of  $2^{\circ}$  edition: </\*p><\*p>The students that do not realise continuous evaluation, due to the fact that the centre has accepted them the renunciation, always will have to realise in all the announcements tests it type [To] (by value of 6 points) and tests it type [D] (by value of 4 points), in the terms specified in the previous sections. </\*p><\*p>To surpass this matter is necessary at least obtain 5 points adding the two previous proofs. </\*p><\*p>EXTRAORDINARY ANNOUNCEMENT: </\*p><\*p>This proof will be equal for all the students and will consist in one tests it type  $\sqcap To \sqcap$  (by value of 6 points) and tests it type  $\sqcap D \sqcap$  (by value of 4 points), in the terms specified in the previous sections. </\*p><\*p>To surpass this matter is necessary at least obtain 5 points adding the two previous proofs. </\*p><\*p>ETHICAL COMMITMENT:</\*p><\*p>expects that the present student a suitable ethical behaviour, free of fraud. In case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, for example) will consider that the student does not gather the necessary requirements to surpass the matter. In this case the global qualification in the present academic course will be of suspense (0.0).</\*p>

General description	This syllabus presents information the Fluid mechanics Industrial Technologies Engineering, 2019-2020, in acc Space of Upper Education.  This is a first course in fluid mechanics, focusing on the Engineering applications.  The course is intended to acquire essential knowledge material, such us hydraulic machinery, lubrication devi pneumatic systems, aero and hydrodynamics devices, It includes stress and strain rate descriptions, fluid stat	e topics that are needed to analy ces, heating and windturbines, e ics, use of differ	marked guidelir relevant to Ind yze devices with d cooling syster tc. rential and finite	ustrial Technologies In fluid as a working Instructions, pipes systems, Instructions of the control volume analysis
	with continuity, momentum, and energy equations, Be using Navier-Stokes equations, dimensional analysis, la	rnoulli and Eule	equations, inc	ompressible viscous flow

# Competencies

Code

- B4 CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and to communicate and transmit knowledge, skills and abilities in the field of Industrial Engineering.
- B5 CG5 Knowledge to carry out measurements, calculations, assessments, appraisals, surveys, studies, reports, work plans and other similar works.
- C8 CE8 Knowledge of the basic principles of fluid mechanics and their application to solving problems in the field of engineering. Calculation of pipes, channels and fluid systems.
- D2 CT2 Problems resolution.
- D9 CT9 Apply knowledge.
- D10 CT10 Self learning and work.

Expected results from this subject	Tra	_	nd Learning sults
Knowledge for the realisation of measurements, calculations, assessments, evaluations, studies, reports, plans of works and other analogous works	B4 B5	C8	D2 D9 D10
Capacity to: solve problems with initiative and creativity, take decisions, develope critical reasoning and capacity to communicate and transmit knowledge and skills in the field of the industrial engineering	B4 B5	C8	D2 D9 D10
Knowledge of the basic principles of the fluid mechanics and his application to the resolution of problems in the field of the engineering. Intended learning outcomes are, understanding of the basics of flow behaviour in engineering systems, awareness of the physical laws that govern fluid motion and development of analytical skills for simple flow systems, e.g. calculation of pipes, channels and fluid systems	B4 B5	C8	D2 D9 D10
Resolution of problems	B4 B5	C8	D2 D9 D10

Contents	
Торіс	

1. Introduction	1.1 Fundamental Concepts
	1.1.1 Stress tensor. Newton Law
	1.2 The Fluid as a Continuum
	1.3 Viscosity 1.3.1 Newtonian Fluids and non Newtonian fluids
	1.4 Characteristics of the flows
	1.4.1 Different types of flows
	1.4.1.1 Geometrical conditions
	1.4.1.2 Kinematic conditions
	1.4.1.3 Mechanical conditions
	1.4.1.4 Compressibility
	1.5 Stresses on a fluid
	1.5.1 Tensorial and vectorial magnitudes
	1.5.1.2 Volumetric Forces
	1.5.2.2 Surface Forces
	1.5.2.3 The stress tensor
2. Dagis Physical Laws of Fluid Machanics	1.5.2.4 Concept of pressure
2. Basic Physical Laws of Fluid Mechanics	2.1 Velocity field 2.2 Streamlines and pathlines
	2.3 Systems and Control volumes
	2.4 Integrals extended to Fluid volumes. The Reynolds Transport Theorem
	2.5 Conservation of Mass. Integral and Differential Equation
	2.6 The Linear Momentum Equation. Integral and Differential Equation.
	2.7 Navier-Poisson Law
	2.8 The Energy Equation. Integral and Differential Equation. Frictionless
	Flow: The Bernoulli Equation
3. Dimensional Analysis. Similarity concepts	3.1 Introduction
	3.2 The Pi Theorem
	3.3 Applications
	3.4 Fundamental Nondimensional Numbers in Fluid Mechanics
	3.4.1 Physical meaning of the nondimensional numbers
	3.5 Similarity in Fluid dynamics
	3.5.1 Partial Similarity
4. Laminar viscous flow	3.5.2 Scaling effect 4.1 Introduction
4. Laminar viscous now	4.2. Fully developed flow
	4.2.1 Hagen-Poiseuille Flow
	4.2.2 Viscous flow in circular ducts
	4.2.3 Flow in Noncircular Ducts
	4.3 Entrance region effect
	4.4 Losses in Pipe Systems
	4.4.1 Friction coefficient
	4.5 Stability of laminar flow
5. Turbulent Flow in ducts	5.1 Introduction
	5.2 Pipe-head Loss in turbulent regime
	5.2.1 Nikuradse chart
	5.2.2 Moody chart
6. Minor Losses in Pipe Systems	5.2.3 Empirical Formulas for flow in circular ducts. Hydraulic diameter 6.1 Introduction
o. Millor Losses in Pipe Systems	6.2 Minor Losses6.2.1 Loss at the entrance of a pipe
	6.2.2 Loss at the exit of a pipe
	6.2.3 Loss at contractions
	6.2.4 Loss at expansions
	6.2.5 Loss at elbows
	6.2.6 Losses at bends, elbows, tees and valves
	6.3 Pipes in series
	6.4 Pipes in parallel
	6.5 The three-reservoir pipe junction problem
	6.6 Pipings netwoks
	6.7 Nonsteady effects in duct flows
	6.7.1 Emptying time of a tank
	6.7.2 Setting of the steady flow in a pipe
	6.7.3 Water hammer

7. Open-Channel Flow	<ul><li>7.1 Introduction</li><li>7.2 Uniform Flow</li><li>7.2.1 Pipes used like channels</li><li>7.3 Non uniform flow</li><li>7.3.1 The hydarulic jump</li></ul>
	7.3.2 Fast transitions
	7.3.3 Flow over a gate
	7.3.4 Flow under a gate
	7.3.5 Section of control
8. Experimentation withFflows. Discharge	8.1 Pressure Gauge
Measurement. Pressure Measurement. Speed	8.1.1 Simple pressure gauge
Measurement	8.1.2 Bourdon pressure gauge
	8.1.3 Transductor of pressure
	8.2 Speed measurement
	8.2.1 Pitot tube
	8.2.2 Prandtl tube
	8.2.3 Rotative anemometer
	8.2.4 Hot thread anemometer
	8.2.5 Laser-doppler anemometer
	8.3 Flow measurement
	8.3.1 Differential pressure: diaphragm, venturi, nozzle
	8.3.2 Other types

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	They explain the foundations of each subject needed to solve practical problems. It includes mainly
	lectures baut can also includes:
	Readings
	bibliographic Review
	Solution of problems
	Conferences
	Oral Presentations
Problem solving	They will apply the concepts tackled in the lectures. It includes activities such as:
	Readings
	Seminars
	Solution of problems
	Team working
	Study of practical cases
Mentored work	Works of practical applications, projects, design, creative and novelty subjects of practical
	applications of fluid mechanics
Laboratory practical	Fundamentally, they will consist on activities of experimentation, although they also can include:
	Practical cases
	Simulation
	Solution of problems
	Team working

Personalized assistance		
Methodologies	Description	
Lecturing	Personalized attention will be given to the students during class (throughout the possible questions that could arise) and during the specific timetable of the teacher for tutorships. Updated information of the tutorships timetables will be given to the students (Faitic)	

Laboratory practical Personalized attention will be given to the students during class (throughout the possible questions that could arise) and during the specific timetable of the teacher for tutorships. Updated information of the tutorships timetables will be given to the students (Faitic)

Assessment

#### Other comments on the Evaluation

Continuous evaluation: it represents 20% of the note. Except official indication from the center direction of the renunciation of the student to the continuous evaluation, the student follows the course in this modality.

Continuous evaluation is considered until July, so the qualifications achieved in all the activities previously carried out are kept until the July Final Exam. The exact percentages may deviate slightly from those indicated due to the management, or feasibility of carrying out the different practical tests, and attributing to the complementary activity (work and projects) a higher qualification and, may even exceed 10 as the maximum qualification achievable.

In any case, the weight of 80% of the long answer test will remain unchanged.

The student is expected to exhibit adequate ethical behaviour. In case of noticing a non-ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, and others) it will be considered that the student does not gather the necessary requirements to pass the course. In this case, the global qualification of the present academic course will be failed (0.0). The use of any electronic device during the evaluation tests will not be allowed unless expressly authorized. The fact of introducing an electronic device not authorized in the exam room will be considered a reason for not passing the subject in this present academic course and the global qualification will be failed (0.0).

Contents			
Topic			
1. Introduction	1.1 Introduction		
	1.2 Review of statics fundamentals and applied concepts for further		
	progress in solid mechanics and stress analysis		
2. Basic principles of elasticity and mechanics of	2.0 Stress and strain. Linear elastic materials		
materials.	2.1. Normal stress in an axially loaded prismatic bar.		
	2.2. Equilibrium of a deformable body.		
	2.3. Stress-Strain diagram of ductile materials. Hooke's Law.		
	2.4. Stress resultants. Diagrams.		
3. Axial loads	3.1. Normal forces.		
	3.2. Elastic deformation of an axially loaded member.		
	3.3. Statically governed problems.		
	3.4. Statically indeterminate problems.		
	3.5. Thermal stress and assembly misfits.		
4. Bending and shear	4.1 Beams: definition and types. Loads on beams.		
	4.2 Internal shear forces and bending moments.		
	4.3 External load, shear force and bending moment relationships.		
	4.4 Shear and moment diagrams		
	4.5 Pure bending and non-uniform bending. Hypothesis and limitations.		
	4.6. Normal stresses in unsymmetric bending.		
	4.7 Symmetric bending. The flexure formula (Navier's Law).		
	4.8 Section modulus of a beam. Ideal beam cross-section.		
	4.9 Deflection of beams and shafts. Slope and deflection.		
	4.10 Hyperstatic bending.		
	4.11 The shear formula.		
5. Introduction to compressive buckling	4.1. Definition		
	4.2. Critical load. Euler's formula.		
	4.3. Limitations of Euler's formula.		
	4.4. Practical applications.		
6. Introduction to torsion	6.1. Definition.		
	6.2. Torsion in circula shafts.		
	6.3. Torque diagrams		
	6.4. Torsional stresses and deformations.		

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	32.5	49	81.5
Laboratory practical	9	23	32
Project based learning	9	24.5	33.5
Essay questions exam	3	0	3

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Lecture where theoretical principles are presented using digital media, videos and blackboard.
Laboratory practical	Activities of application of the knowledge to concrete situations and of acquisition of basic skills and procedural skills related with the subject of study.
Project based learning	Resolution of problems related to real case studies

Personalized assistance			
Methodologies	Description		
Laboratory practical	Resolution of doubts and personalized attention during office hours.		

Assessment			
	Description	Qualification	Training and Learning Results
Laboratory practical	A) it will evaluate the attendance and active participation in all the practicals of the semester, as well as the correct delivery (time and form) of all the documentation requested (reports, exercises, etc.).  Practical sessions will be held in a fixed date, so it is not possible to attend the practical in a later date. Whether the student does not attend to a practical, he/she must demonstrate that the absence was due to unavoidable reasons (e.g. medical reasons). Practicals will marked with the value indicated, only when the student reaches the minimum mark in the written exam, which is 45%. (See following section 'Other comments')	2.5	
Project based learning	C) Written tests to evaluate the individual work delivered by the student. It will be compulsory the attendance to the 90% of the practicals to obtain the marks given in section C. The marks obtained in the sections A will proportionally affect to the marks of the section C. The section C will be marked with a maximum value of 12,5% of the total mark, only when the student reach the minimum mark in the written exam, which is 45%.  (See following section: 'Other comments')		
Essay questions exam	Written exam in the dates established by the School.	85	

# Other comments on the Evaluation

Students resigning continuum assessment (after School aproval) will be evaluated only through the written exam which will be graded with 100% of final mark.

Continuum assessment is composed of sections A and C. The maximum mark for continuum assessment (NEC) is 15%, which will be computed from the following equation: NEC (%) =  $0.25 \cdot (A) + 1.25 \cdot (C) \cdot (A)$ ; where A and C are granted 0-1.

Ethical commitment: it is expected an adequate ethical behavior of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Na practica totalidade dos procesos industriais requirese a aplicación dos Principios da Termodinamica e da Transferencia de Calor. O coñecemento destes principios é básico en Enxeñaría Térmica. Por exemplo, para a realización dunha análise enerxética (con determinación do rendemento enerxético e \*exergético) de sistemas de potencia para a xeración de electricidade (ciclo combinado con \*turbina de vapor e de gas), un ciclo de potencia mecánica, un ciclo en bomba de calor, etc. O coñecemento de se un proceso termodinámico pode ocorrer ou non na realidade é imprescindible para o deseño de novos procesos, así como o coñecemento das máximas prestacións que se poden obter nos diferentes dispositivos que compoñen unha instalación enerxética, e cales son as causas que imposibilitan obter esas máximas prestacións. Ademais, o estudo das propiedades termodinámicas dos fluídos de traballo que circulan polos dispositivos, auga, aire, \*refrigerantes, gases e mestura de gases, é indispensable para analizar o comportamento dos sistemas térmicos. Así mesmo, o estudo do procedemento a seguir para a análise enerxética de instalacións enerxéticas de sistemas de refrixeración, acondicionamento de aire e en procesos de combustión é de gran interese.

Doutra banda, é interesante para o alumno coñecer os mecanismos polos cales se produce a transferencia da enerxía, principalmente debido a unha diferenza de temperaturas, centrándose en determinar a maneira e a velocidade á que se produce ese intercambio de enerxía. Neste sentido preséntanse o tres modos de transferencia de calor e os modelos matemáticos que permiten calcular as velocidades de transferencia de calor. Así se pretende que os alumnos sexan capaces de expor e resolver problemas \*ingenieriles de transferencia de calor mediante o uso de ecuacións \*algebraicas. Tamén se pretende que os alumnos coñezan outros métodos matematicamente máis complexos de resolución de problemas de transferencia de calor e saiban onde atopalos e como usalos en caso de necesitalos.

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Metodoloxía docente	
	Description
Lección maxistral	Exposición por parte do profesor dos contidos da materia obxecto de estudo, onde se procurará a máxima participación do alumno, a través da súa implicación directa na formulación de cuestións e/ou problemas,
Prácticas de laboratorio	Experimentación de procesos reais en laboratorio e que *complemantan os contidos da materia, completado con algunha práctica con software específico
	CONTIDOS PRÁCTICOS: (polo menos realizaranse 3 das prácticas propostas)
	1)Aplicacións do Primeiro Principio: Determinación Experimental dos Procesos *Isotermos e *Adiabáticos
	2)Avaliando Propiedades Termodinámicas de Sustancias Puras mediante o uso de software informático
	3)Estudo Experimental dun Ciclo de Vapor
	4)Estudo Experimental dun Ciclo de Refrixeración por *Compresión de Vapor e funcionamento como Bomba de Calor
	5)Cálculo Experimental da Condutividade Térmica en Placas
	6)Avaliando a Transferencia de Calor por Radiación: Lei de *Stefan-*Boltzmann
Resolución de problemas de forma autónoma	Resolución de problemas e/ou exercicios relacionados coa materia que o alumno levará a cabo mediante a consulta da bibliografía
Resolución de problemas	Resolución de problemas e/ou exercicios relacionados coa materia que o alumno realizará en aula e/ou laboratorio. Resolveranse problemas de carácter "tipo" e/ou exemplos prácticos. Salientarase o traballo en expor métodos de resolución e non nos resultados.

Atención personalizada		
Methodologies	Description	
Lección maxistral	Formulación de dúbidas en horario de *tutorias. O alumno exporá, durante o horario dedicado ás *tutorías, as dúbidas concernentes aos contidos que se desenvolven na materia, e/ou exercicios ou problemas que se expoñan relativos á aplicación dos contidos	
Prácticas de laboratorio	Formulación de dúbidas en horario de prácticas. O alumno exporá, durante o horario dedicado ás prácticas, as dúbidas relativas aos conceptos e desenvolvemento das citadas prácticas	
Resolución de problemas	Formulación de dúbidas en horario de *tutorias. O alumno exporá, durante o horario dedicado ás *tutorías, as dúbidas concernentes aos contidos que se desenvolven na materia, e/ou exercicios ou problemas que se expoñan relativos á aplicación dos contidos	

Avaliación	
Description	Qualification Training and
	Learning
	Results

Resolución de problemas e/ou exercicios	Exame final escrito consistente na resolución de problemas de resposta extensa, ou exercicios e/ou cuestións teóricas, relativos aos contidos da materia desenvolvida (sesións de teoría, prácticas de laboratorio, etc.), e en tempo/condicións establecido/*as polo profesor	80
	Este exame levará a cabo nas datas fixadas pola organización docente do centro	
	Resultados de aprendizaxe: Capacidade para coñecer, entender e utilizar os principios e fundamentos da termodinámica aplicada e a transmisión de calor	
Exame de preguntas obxectivas	Ao longo do cuadrimestre realizaranse varias probas de seguimento.	20
	A nota correspondente ás diferentes probas de seguimento estará baseada en probas escritas	
	de resposta curta.	
	Esta nota corresponderase coa denominación de Avaliación Continua	

#### Other comments on the Evaluation

#### Modalidade de seguimiento por Avaliación Continua.

A cualificación final (CF) do alumno determinarase sumando os puntos obtidos no exame final (EF) e os obtidos por avaliación continua (EC)

Non se esixirá unha nota mínima no exame final para sumar a correspondente nota de avaliación continua. En calquera caso é necesario obter unha cualificación final igual ou superior a 5 puntos para aprobar a materia.

Cada matricula na asignatura, no curso, supón a posta a cero das cualificacións nas actividades de avaliación continua obtida en cursos anteriores

Segundo a Normativa de Avaliación Continua, os alumnos suxeitos a Avaliación Continua que se presenten a algunha actividade evaluable recolleita na Guía Docente da asignatura, serán considerados como "presentados" e teráselles en conta para a cualificación final

Para a realización das probas consideradas como Avaliación Continua, a realizar ao longo do curso, o alumno deberá ir provisto dos materiais e/ou documentación necesarios pararealizarla: calculadora (non-programable), táboas e diagramas de propiedades daquelas sustancias que se estudan. Non se permitirá ningunha clase de formulario ou similar nestas probas

Nas diferentes probas de avaliación continua e exame final aconséllase ao alumnado que xustifiquen todos os resultados que consigan. Non se dará ningún resultado por ?sobreentendido? e terase en conta o método empregado para chegar á solución proposta

# Modalidade de renuncia á Avaliación Continua.

Aqueles alumnos que obteñan oficialmente a renuncia á avaliación continua, utilizando as canles previstas pola escola, serán evaluados, nas datas oficiais fixadas polo centro das dúas convocatorias/edicións, mesmo día e hora, mediante unha avaliación específica. Esta proba de avaliación específica terá en conta todos os contidos impartidos na asignatura (teoría, problemas e prácticas de laboratorio), e supoñerá o 100% da nota máxima. Levarase a cabo da seguinte forma:

- 1.-Proba escrita (EF), cun peso do 80% sobre a cualificación final, idéntica ao exame final dos demais alumnos que seguen a avaliación continua
- 2.-Unha proba específica (EC), cun peso dun 20% sobre a cualificación final. Esta proba específica incluirá tanto os contidos de prácticas de laboratorio como os impartidos nas sesións de teoría

#### Criterios de cualificación.

En primeira edición da convocatoria ordinaria a cualificación do alumnado (CF) calcularase tendo en conta o criterio:

 $CF = 0.2 \cdot EC + 0.8 \cdot EF$ 

En segunda edición da convocatoria ordinaria a cualificación do alumnado (CF) calcularase seguindo o criterio:

CF= máximo(N1, N2), sendo,

 $N1 = 0.2 \cdot EC + 0.8 \cdot EF$ 

#### N2 = FF

Empregarase un sistema de cualificación numérica de 0 a 10 puntos segundo a lexislación vigente (RD 1125/2003 de 5 de setembro. BOEde 18 de setembro)

Os exames da convocatoria fin de carreira poderán ter un formato de exame distinto ao detallado anteriormente.

Todas as probas, ben as correspondentes á Avaliación Continua como ao Exame Final, deberán realizarse a bolígrafo ou pluma, preferiblemente azul. Non se permitirá a entrega destas probas a lapis ou a bolígrafo vermello.

Non se permitirá, en todas a probas, ben consideradas de avaliación continua ou exame final, o uso de dispositivos electrónicos tales como tablet, smartphone, portátil, etc.

Compromiso ético.

Espérase que o alumno presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (copia, plagio, utilización de aparellos electrónicos non autorizados, etc.), considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Nese caso, a cualificación global no presente curso académico será de suspenso (0.0).

Nos e permitirá a utilización de ningún dispositivo electrónico durante as probas de avaliación, salvo autorización expresa. O feito de introducir un dispositivo electrónico non autorizado no aula de exame será considerado motivo de non superación da materia no presente curso académico e a cualificación global será de suspenso (0.0).
