Subjects

Year 1st

Code	Name	Quadmester	Total Cr.
V04M183V01101	PLM and Lean Manufacturig	1st	3
V04M183V01102	Cloud Computing and Big Data	1st	3
V04M183V01103	Industrial communications and industrial cybersecurity	1st	3
V04M183V01104	Intelligent systems in the industry	1st	3
V04M183V01105	Cyberphysical systems	1st	3
V04M183V01106	Smart Manufacturing e Smart logistics	1st	3
V04M183V01107	CAD / CAM / CAE Advanced Systems	1st	3
V04M183V01108	Simulation applied to plant management	1st	3
V04M183V01109	Industrialization and industrial innovation. Lean Approach	2nd	3
V04M183V01110	Horizontal competencies and talent management.	1st	3
V04M183V01111	Development and management of R + D + i projects	1st	3
V04M183V01112	Advanced calculation tools for engineering	1st	3
V04M183V01201	Industrial Internet of Things (IIoT)	2nd	4.5
V04M183V01202	Additive manufacturing	2nd	3
V04M183V01203	Advanced verification and inspection systems	2nd	3
V04M183V01204	Robotics and virtual reality in the industry	2nd	3
V04M183V01205	Simulation applied to design and manufacturing	2nd	4.5

V04M183V01206	External practices	2nd	6
V04M183V01207	Master's thesis	2nd	6

Description

=== EXCEPTIONAL PLANNING ===
Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee,

at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===
* Teaching methodologies maintained

* Teaching methodologies modified

* Non-attendance mechanisms for student attention (tutoring)

* Modifications (if applicable) of the contents

* Additional bibliography to facilitate self-learning

* Other modifications

=== ADAPTATION OF THE TESTS ===

Lecturers	Fernández Ulloa, Antonio Soto Campos, Enrique			
E-mail	esotoc@uvigo.es			
Web	http://masterindustria40.webs7.uvigo.es/wordpress/			
General description	Know the elements and principles of operation of the cyberphysic systems resulting from the integration of physical processes, computational resources and communications.			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A5	Students have got the learning skills that will enable them to continue studying in a largely self-directed or autonomous manner
B2	Problem solving.
B5	Oral and written communication in your own language.
B7	Computer skills related to the field of study.
C11	Know and use the elements and principles of operation of cyberphysical systems resulting from the integration of physical, computational and communication processes.
C12	Develop cyberphysical systems for application to product and process solutions in factories, using Systems Engineering procedures.
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork

Learning outcomes	
Expected results from this subject	Training and Learning Results
1. Know the elements and principles of operation of the cyberphysic systems resulting from the integration of physical processes, computational and communications.	A5 B5 C11 C12 D1
2. Know the applications of the cyberphysics systems in the context of the Industry 4.0.	A1 B5 C11 C12 D2
3. Developcyberphysic systems for its application to solutions of product and of process in the factories 4.0, employing procedures of Engineering of Systems.	A2 A5 B2 B7 C11 C12 D3
4. Apply the criteria of efficiency and quality to the development of cyberphysic systems.	C11 C12

Contents

Topic	
1. Cyberphysics in the Industry 4.0.	Introduction
2. Integration of physical processes, computational resources and communications.	Basic concepts
3. Components of cyberphysics systems: subsystems, functions and internal and external relations.	3.1. Embedded Systems 3.1.1. Microprocessors and microcontrollers 3.1.2. Programming 3.1.3. Peripherals of microcontrollers 3.2. Communications 3.2.1. Principles of the digital communications 3.2.2. Industrial communications 3.3. Sensors and actuators 3.3.1. Sensors 3.3.2. Actuators
4. Applications of the cyberphysics systems in the industry.	4.1. Industrial communications systems 4.2. Arduino
5. Development of cyberphysics systems for solutions of product and of processes.	Practical examples.
6. Application of Systems Engineering to the study of the cyberphysics systems.	Introduction
7. Analysis of the execution of cyberphysics systems.	Practical examples

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	9	12	21
Problem solving	5	20	25
Laboratory practical	10	15	25
Objective questions exam	1	3	4
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies

	Description
Lecturing	They will expose the most important aspects of the subject, looking for the active participation of the student posing questions that has to resolve in class.
Problem solving	The students will resolve in class with the help of the professor applications of the theory.
Laboratory practical	Laboratory with embedded systems, sensors and communications systems.

Personalized assistance

Methodologies	Description
Problem solving	The students will be able to access anytime to academic support through the professor office or virtual room and the email
Laboratory practical	The students will be able to access anytime to academic support through the professor office or virtual room and the email
Tests	**Description**
Objective questions exam	The students will be able to access anytime to academic support through the tutorial sessions in the professor's office or virtual room and by email. The students will be supervised at all times during the tests.

Assessment

	Description	Qualification	Training and Learning Results			
Problem solving	Systematic observation. Complementary activities of continuous evaluation	30	A2	B2 B5	C11 C12	D1 D2 D3
Laboratory practical	Presentations/Work/Project/Laboratory report	50	A5	B5 B7	C11 C12	D1 D2 D3
Objective questions exam	Exam of objective questions. Partial objective test and/or finals	20	A1 A5	B5	C11 C12	

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Contingency plan

Description

=== EXCEPTIONAL MEASURES SCHEDULED ===
In front of the uncertain and unpredictable evolution of the sanitary alert caused by the COVID- 19, the University establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or no totally face-to-face. These already scheduled measures guarantee, in the moment that was prescriptive, the development of the teaching of a way but agile and effective when being known in advance (or with a wide in advance) by the students and the faculty through the tool normalised and institutionalised of the educational guides DOCNET.

=== ADAPTATION OF The METHODOLOGIES ===
The educational methodologies will give , to be necessary, adapting them to the telematic means that put the disposal of the faculty, in addition to the documentation facilitated through FAITIC and other platforms, email, etc.
When it was not possible to face-to-face teaching, in the measure of the possible, will prevail the teaching of the theoretical contents by telematic means as well as those contents of practices of resolution of problems, classroom of computing, and others, that can be virtualized developed by the students of way guided, tried keep the attendance presenciality for the experimental practices of laboratory, whenever the groups fulfil with the rule established in the moment by the pertinent authorities in sanitary matter and of security. In the case of not being able to be given of face-to-face form, those contents no virtualizable will give or replace by other (autonomous work guided, etc.) that allow to achieve equally the competitions associated to them.

* Educational methodologies that keep

* educational Methodologies that modify

* Mechanism no face-to-face of attention to the students (tutorials)
The tuitorials will be able to develop indistinctly of face-to-face form (whenever
it was possible to guarantee the sanitary measures) or telematic (email and others) respecting or adapting the schedules of tutorials planned. Besides, it will do an adaptation methodological to the students of risk, facilitating him additional specific information, to accredit that it can not have access to the contents given of conventional form.
* Modifications (proceed) of the contents to give

* additional Bibliography to facilitate to car-learning
Will be able to be added along the course to facilitate the self-learning

* Other modifications

=== ADAPTATION OF The EVALUATION ===
Will keep those proofs that already come making of telematic form and, in the measure of the possible, will keep the face-to-face proofs adapting them to the valid sanitary rule. The proofs will develop of face-to-face form except Rectoral Resolution that indicates they have to do of form non face-to-face, making gave way through the distinct tools put the disposal of the professors. Those no attainable proofs of telematic form will be replaced by other (deliveries of autonomous work guided, etc.)

* Proofs already made
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Pending proofs that keep
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Proofs that modify
[previous Proof] => [new Proof]

* New proofs
does not proceed
* additional Information
keep the criteria of evaluation adapting the realisation of the proofs, in the case to be necessary and by indication in Rectoral Resolution, to the telematic means put the disposal of the teachers

Descriptors	ECTS Credits	Choose	Year	Quadmester
	3	Mandatory	1st	1st
Teaching language	Spanish Galician English			
Department				
Coordinator	Peláez Lourido, Gustavo Carlos			
Lecturers	Peláez Lourido, Gustavo Carlos Tjahjono , Benny Eko			
E-mail	gupelaez@uvigo.es			
Web	http://masterindustria40.webs7.uvigo.es/wordpress/			
General description	This course studies the basic principles of Smart Manufacturing and Smart Logistics, which are based on the exploitation of information accessible through multiple channels, to streamline business models and bring as close as possible the product/process/service customized to the final consumer, understood as the best value-cost perceived by that consumer.			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
A4	Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner
B1	Organization and planning skills
B6	Knowledge and use of the English language.
B7	Computer skills related to the field of study.
C13	Use the integration of different data sources for the definition of flexible, reliable and efficient supply chain management systems, supported by the Industrial Internet of Things and optimized logistics management software tools
C14	Know the concepts, principles and tools of intelligent manufacturing systems, which facilitate access to information and production data through automated tools for capturing, processing and displaying information
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork

Learning outcomes	
Expected results from this subject	Training and Learning Results
Get the understanding of the concepts that underlying Smart Manufacturing and Logistics	A1 B6 B7 C14
Understand the different technologies that can potentially be adopted for Smart Manufacturing and Smart Logistics	A1 A3 B6 B7 C13 C14

Know how to assess Industrial Internet of Things (IIoT) applications in the context of Manufacturing and Logistics	A2 A3 A4 B1 B6 B7 C13 C14 D1 D2
Recognise the benefits and impacts of Smart Manufacturing on the Supply Chain, including Logistics	A3 B1 B6 C13 C14 D1 D2 D3
Understand challenges and threats posed by the underlying technologies to Manufacturing and Logistics	A1 A3 A4 B6 B7 C13 C14 D1 D2 D3

Contents	
Topic	
The roles of manufacturing within the modern supply chain	
Typology of manufacturing systems	
Supply Chain Operations Reference (SCOR) model	
Manufacturing control systems	
Internet of Things applications in the manufacturing/production control systems	
Utilising cloud computing	
Industry 4.0 and its impact in manufacturing and the supply chain	
Benefits and challenges in the adoption of Industry 4.0	(*)- Equipos y dispositivos como activos inteligentes - Herramientas de Análisis de Negocio: Business intelligence. - Optimización de los procesos de Producción. - Sostenibilidad aplicada a la Fábrica Inteligente
Digital Readiness	
Intelligent Factories and Business Intelligence (BI)	- Equipment and devices as "intelligent assets" - Business Analysis Tools: Business intelligence. - Optimization of Production processes. - Sustainability applied to the Intelligent Factory

Planning			
	Class hours	Hours outside the classroom	Total hours
Case studies	5	10	15
Practices through ICT	3	11	14
Portfolio/dossier	0.5	9	9.5
Lecturing	12	12	24
Objective questions exam	0.5	2	2.5
Systematic observation	2	0	2
Presentation	2	6	8
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description

Case studies	Analysis of a fact, problem or real event with the aim to know it, interpret, resolv, generate hypothesis, contrast data, reflect, complete knowledges, diagnosed and train in alternative procedures of solution.
Practices through ICT	Activities of application of knowledge in a given context and acquisition of basic and procedural skills related to the subject, through ICT.
Portfolio/dossier	Compilation of the work of the/the student with the objective to show his efforts, progresses and attainments in an area. The compilation owes to include contents chosen pole student/it, the criteria of selection and evidences of selfreflection.
Lecturing	Lecture by the professor of the content envelope to subject object of study, theoretical bases and/or guidelines of one work, exercise that the student has to develop

Personalized assistance

Methodologies	Description
Practices through ICT	Monitoring and individual evaluation of activities. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity.
Portfolio/dossier	Preparation of the materials, activities, etc., on which the students will work. Although the activities will be carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity
Tests	**Description**
Objective questions exam	Individualized attention to students during the tests. Review of tests and evaluation activities.
Presentation	Tracking the evolution of the workjob and help the students in the preparation of the presentation/exhibition.

Assessment

	Description	Qualification	Training and Learning Results
Portfolio/dossier	Ojectives: Evaluate higher thinking skills. Assess analysis, synthesis and evaluation.	15	A1 B1 C13 D1 A2 B6 D2 A3 A4
Objective questions exam	Tests that evaluate knowledge that include closed questions with different answer alternatives (true/false, multiple choice, matching of elements...). Students select an answer from a limited number of possibilities (preferably four) with a reduction for failure of a value equal to the percentage of success (-0.25 pts. in the case of four possible answers if the value of the question is 1 pt.). The test of objective questions only evaluates knowledge. It does not evaluate skills or attitudes. It evaluates lower thinking. It evaluates knowledge, understanding and application.	20	A1 B7 C14 A3
Systematic observation	Careful, rational, planned and systematic perception to describe and record the manifestations of student behaviour. It is possible to assess learning and actions and how they are carried out by evaluating order, precision, ability, efficiency... The aim is to evaluate higher thinking.	15	A1 B1 C13 D1 A2 B6 D2 A3 D3 A4
Presentation	Presentation by the students to the teacher and/or a group of students of an aspect on the contents of the subject or the results of a work, exercise, project... It can be carried out individually or in a group. In the presentation, knowledge, skills and attitudes are evaluated. The objectives are to evaluate higher thinking (analysis and synthesis).	50	A1 B1 C13 D1 A2 B6 C14 D2 A3 D3 A4

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

=== ADAPTATION OF The METHODOLOGIES ===
The educational methodologies will give , to be necessary, adapting them to the telematic means that put the disposal of the faculty, in addition to the documentation facilitated through FAITIC and other platforms, email, etc.
When it was not possible to face-to-face teaching, in the measure of the possible, will prevail the teaching of the theoretical contents by telematic means as well as those contents of practices of resolution of problems, classroom of computing, and others, that can be virtualized developed by the students of way guided, tried keep the attendance presenciality for the experimental practices of laboratory, whenever the groups fulfil with the rule established in the moment by the pertinent authorities in sanitary matter and of security. In the case of not being able to be given of face-to-face form, those contents no virtualizable will give or replace by other (autonomous work guided, etc.) that allow to achieve equally the competitions associated to them.

* Educational methodologies that keep

* educational Methodologies that modify

* Mechanism no face-to-face of attention to the students (tutorials)
The tuitorials will be able to develop indistinctly of face-to-face form (whenever
it was possible to guarantee the sanitary measures) or telematic (email and others) respecting or adapting the schedules of tutorials planned. Besides, it will do an adaptation methodological to the students of risk, facilitating him additional specific information, to accredit that it can not have access to the contents given of conventional form.
* Modifications (proceed) of the contents to give

* additional Bibliography to facilitate to car-learning
Will be able to be added along the course to facilitate the self-learning

* Other modifications

=== ADAPTATION OF The EVALUATION ===
Will keep those proofs that already come making of telematic form and, in the measure of the possible, will keep the face-to-face proofs adapting them to the valid sanitary rule. The proofs will develop of face-to-face form except Rectoral Resolution that indicates they have to do of form non face-to-face, making gave way through the distinct tools put the disposal of the professors. Those no attainable proofs of telematic form will be replaced by other (deliveries of autonomous work guided, etc.)

* Proofs already made
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Pending proofs that keep
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Proofs that modify
[previous Proof] => [new Proof]

* New proofs
does not proceed
* additional Information
keep the criteria of evaluation adapting the realisation of the proofs, in the case to be necessary and by indication in Rectoral Resolution, to the telematic means put the disposal of the teachers

IDENTIFYING DATA				
CAD / CAM / CAE Advanced Systems				
Subject	CAD / CAM / CAE Advanced Systems			
Code	V04M183V01107			
Study programme	M.U. Industry 4.0			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	3	Mandatory	1st	1st
Teaching language	Spanish Galician English			
Department				
Coordinator	Cerqueiro Pequeño, Jorge			
Lecturers	Cerqueiro Pequeño, Jorge Peláez Lourido, Gustavo Carlos Pereira Domínguez, Alejandro Villar García, Marcos			
E-mail	jcerquei@uvigo.es			
Web	http://masterindustria40.webs7.uvigo.es/wordpress/			
General description	The aim of this course is to train the students in the selection of the most suitable CAD, CAM and CAE systems according to the specific case of application, in the frame of the Industry 4.0 paradigm. The course will make the students to get involved in the practical use of the different tools available within those systems, allowing them to explore their capabilities and limitations, going all the way to the elaboration of benchmarking analysis and specification documents about such systems.			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A4	Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner
B1	Organization and planning skills
B3	Descion making
B7	Computer skills related to the field of study.
C23	Know and select the most suitable advanced CAD/CAM/CAE environments to be integrated and implemented in the Industry.
C24	Knowing how to apply advanced design, manufacturing and engineering tools to the modeling and manufacturing of complex mechanical parts and assemblies in the industry
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources

Learning outcomes	
Expected results from this subject	Training and Learning Results
Knowing the most appropriate CAD/CAM/CAE environments to be implemented in the context of Industry 4.0.	A1 B1 B7 C23
Selecting the appropriate CAD/CAM/CAE solutions to be implemented in response to specific demands, including the design and definition of integrated design and manufacturing systems.	A2 B1 B3 C24 D1 D2
Applying advanced design and engineering tools to the modelling of complex mechanical parts and assemblies.	A2 B3 B7 C24 D1 D2

Applying advanced computer-assisted manufacturing and production engineering tools within the Industry 4.0 framework.	A2 A4 B1 B3 C23 C24 D1 D2

Contents	
Topic	
1. CAD/CAM/CAE systems in Industry 4.0.	1.1. Engineering processes in Industry 4.0. 1.2. CAx functionalities in Industry 4.0.
2. Integrated design and manufacturing systems.	2.1. Integration of systems. 2.2. CAx integrated systems -PDM and PLM- for design and manufacturing.
3. Solid modelling (CAD) systems oriented to the product.	3.1. Hierarchies of entities in 3D CAD systems. 3.2. Parametric solid modelling. 3.3. Product structure. 3.4. The 'design intent'. 3.5. Elaboration of technical documentation.
4. Computer-aided manufacturing (CAM) systems.	4.1. Typologies of CAM systems. 4.2. CAM systems to support different manufacturing processes. 4.3. CAD-CAM connectivity for product engineering.
5. Computer-aided engineering (CAE) systems.	5.1. Typologies of CAE systems. 5.2. CAE systems for supporting design. 5.3. CAE systems for manufacturing support. 5.4. CAD-CAM-CAE connectivity.
6. Applications of CAD-CAM-CAE systems.	6.1. Applications of CAD systems to design. 6.2. Applications of CAM systems to manufacturing. 6.3. Applications of CAE systems to engineering.
7. Selection of AD-CAM-CAE systems.	7.1. Evaluation of engineering needs and elaboration of technical specifications. 7.2. Analysis of CAx systems specifications. 7.3. Methodology for the selection of CAx systems.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	8	18	26
Autonomous problem solving	4	19	23
Practices through ICT	9	14	23
Objective questions exam	1	0	1
Presentation	1	0	1
Systematic observation	1	0	1
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Lecturing	Exhibition by the professor of the contents on the matter that is object of study, its theoretical bases and/or work guidelines aiming to the assignments that the student has to develop.
Autonomous problem solving	Activity in which the students develop assignments and/or exercises related with the subject. The student/to has to perform the analysis and resolution of the problems and/or exercises by himself in an autonomous way.
Practices through ICT	Activities to apply the gained knowledge in a certain context and to acquire basic and procedimental skills related to the matter by using ITC tools.

Personalized assistance	
Methodologies	**Description**
Autonomous problem solving	Activity in which problems and/or exercises related with the subject are formulated. The student has to perform the analysis and resolution of the problems and/or exercises by hinself in an autonomous way. For all the teaching modalities contemplated in the Contingency Plan, the tutorial sessions of could be carried out through telematic means -email, videoconference, FAITIC forums, etc.- under the modality of prior concertation of virtual place, date and hour.

Assessment

	Description	Qualification	Training and Learning Results			
Objective questions exam	Tests composed of objective questions. Mid-term and final assessment.	40	A1	B1 B7	C23	D2
Presentation	Presentations. Assignments. Projects. Report of Laboratory activities.	40	A2 A4	B1	C24	D1
Systematic observation	Systematic observation. Complementary activities of continuous assessment.	20	A4	B3 B7	C24	D1 D2

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Recommendations

Other comments

The communication with the students will be made through the FAITIC distance learning platform, for which it will be necessary that the student accesses the course space in the platform previously to the start of the lecturing period.

Before the realisation of the evaluation tests, it is recommended that the students consult with the FAITIC platform to confirm the tests' date, place, recommendations, etc., as well as the needs regarding using manuals or any another material for carrying out the tests and elaborating the home assignment works.

Contingency plan

Description

In the face of the uncertain and unforeseeable evolution of the health alert caused by COVID-19, University of Vigo has established an exception planning that will be activated at the time the government offices and the own University mandate it. Such decision will be made based on safety, health and responsibility criteria, always guaranteeing the continuity of the teaching processes in a partial or full non-classroom scenario. Those already-planned steps will guarantee, at the moment it is required, the development of the teaching processes in a more streamlined and effective way as both the students and the lecturers will know about them beforehand (or with a broad anticipation), by means of the DOCNET standard institutional tool.

According to the instructions provided by the Vice-Rectorate for Learning Organization and Teaching Staff, the following three scenarios are required to be taken into account with their corresponding contingency level:

SCENARIO 1. Full-classroom modality.

All teaching activities will be carried out at the classroom, both for theory and laboratory classes, according to the typical way for the course in the years before 2020.

SCENARIO 2. Half-classroom modality.

In the case the half-classroom teaching modality is activated by the University government, such event will involve a reduction in the capacity of the usual teaching spaces where the full-classroom modality is developed. Because of that, as a first measure the School will provide the teaching staff of the course with the information regarding the new authorized capacities for such teaching spaces so that the teaching activities can be re-organized for the remaining time of the term. It must be pointed out that the necessary re-organization to implement will depend on the specific moment in the term in which this teaching modality is activated. The following guidelines will be followed in the re-organization or the teaching activities:

a) Communication. All students in the course will be informed through the FAITIC teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, video-call, FAITIC forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers virtual offices.

c) Classroom and non-classroom activities. From the teaching activities that remain until the end of the term, those that could be carried out by all students in class need to be identified (prioritizing laboratory activities when possible), and those other that will be carried out remotely (theory classes are the ones that usually decrease in effectiveness less in this modality), to the effects of the planning of its efficient performance.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the FAITIC portal.

With regard to the tools used for the teaching activities in the non-classroom modality, the CAMPUS REMOTO and FAITIC portals will be of preferential use, complemented if necessary with other solutions in order to address specific needs arising along the lecturing period.

SCENARIO 3. Non-classroom modality.

In the case the full non-classroom modality (discontinuation of all on-class learning and evaluation activities) is activated, the tools offered by the platforms currently available at University of Vigo -CAMPUS REMOTO and FAITIC- will be of preferent use. The specific conditions for the reo-organization to be carried out will depend of the particular time in the term in which such modality is mobilized. The following guidelines will be followed in the re-organization of the teaching activities:

a) Communication. All students in the course will be informed through the FAITIC teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation and/or modification of the teaching methodologies. Even if the teaching methodologies for the course were fundamentally conceived towards the full-classroom modality, the teaching staff considers that they keep in essence their effectiveness in the non-classroom modality. That is why it is proposed to keep them as they are, even if special attention will be payed to their right development and results. Therefore, no changes will be made to the teaching methodologies initially defined for the course.

c) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, video-call, FAITIC forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers virtual offices.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Evaluation. No changes will be made neither to the evaluation tests, nor to their corresponding score weights, nor to their set dates.

g) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the FAITIC portal.

Web	http://masterindustria40.webs7.uvigo.es/wordpress/			
General description	This course deals with one of the most important enabling technologies of the 4.0 industry in the productive field as it is the simulation applied to plant management, from its basic principles to its evolution towards the digital twin and the "virtual commissioning".			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
A4	Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner
B1	Organization and planning skills
B2	Problem solving.
B3	Descion making
B4	Information management capacity.
B6	Knowledge and use of the English language.
B7	Computer skills related to the field of study.
C25	Know and be able to use techniques and tools for mathematical modeling and simulation of discrete event systems and dynamic systems for application in production environments.
C26	Apply simulation tools to solve specific problems in plant management and integrate them into the implementation process of the 4.0 paradigms.
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork

Learning outcomes	
Expected results from this subject	Training and Learning Results
The student can delimit exactly what the different techniques of modeling and simulation of productive flow are used for within the Manufacturing Plant Control	A1 A2 B1 B3 B4 B6 C25

The student get the necessary skills in the use of plant simulation environments to represent complex systems in scenarios where decision making is not easy.	A2 A3 B1 B3 B4 B6 B7 C25 C26
The student knows how to analyze and choose solutions to shop-floor management problems through simulation studies	A3 A4 B1 B2 B3 B4 B6 C26 D1 D2
The student diagnoses problems and proposes solutions and how these should be integrated in the processes oriented to the implementation of 4.0 paradigms	A2 A3 A4 B1 B3 B4 B6 C26 D1 D2 D3

Contents	
Topic	
Shop-Floor Control	- Components - Support tools
Modelling of Production Systems	- Layouts - Control architectures
General Assigment Resources Problem (GAP) in productive plants	- Levels of decision - forms of solution.
Languages and simulation environments. Applications.	- Languages of Simulation - Simulation Environments - Applications
Examples of development of models and applications on simulation environments	- Development of Models: Examples - Applications on simulation environments: Examples
Integration of plant simulation in the process of evolution towards connected and intelligent factories: Digital Twin & Virtual Manufacturing.	- Representation models associated with each level of manufacturing shop-floor management. - Digital Twin - Virtual Comissioning: Connecting models to the IT of each level. Exposure to different scenarios. Testing to debug or confirm performance.

Planning			
	Class hours	Hours outside the classroom	Total hours
Practices through ICT	14	9	23
Project based learning	4	24	28
Lecturing	4	6	10
Objective questions exam	1	5	6
Project	1	6	7
Systematic observation	1	0	1
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Practices through ICT	Activities of application of knowledge in a given context and acquisition of basic and procedural skills related to the subject, through ICT

Project based learning	Develope activities that allow the cooperation of several subjects and confront the students, working in teams, in open problems. They to allow to train, among others, the capacities of cooperative learning, leadership, organization, communication and strengthening of personal relationships.
Lecturing	Presentation by the teacher of the contents on the subject of study, theoretical bases and/or guidelines of a work, exercise that the student has to develop

Personalized assistance

Methodologies	Description
Practices through ICT	Monitoring and individual evaluation of activities. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity.
Project based learning	To design a real project that allows the students to deepen their skills. Monitoring and individual evaluation of activities. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity.
Tests	**Description**
Objective questions exam	Individualized attention to students during the tests. Review of tests and evaluation activities.
Project	Preparation of evaluation activities and evaluation criteria/indicators. Review of evidence and evaluation activities. Communication of results (publication of notes and data and/or review procedure).
Systematic observation	Monitoring and individual evaluation of activities. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity.

Assessment

	Description	Qualification	Training and Learning Results			
Project based learning	Objectives: To assess higher thinking skills. Analysis, synthesis and evaluation are valued. The project evaluates knowledge, skills and attitudes	25	A2 A3 A4	B1 B3 B4 B6 B7	C25 C26	D1 D2 D3
Objective questions exam	Tests that evaluate knowledge that include questions closed with different response alternatives (true/false, multiple choice, matching of elements...). The students choose an answer from a limited number of possibilities (preferably four) with a reduction for failure equal to success probability (-0.25 pts. in the case of four possible answers, if the value of the question is 1 pt). The test of objective questions only evaluates knowledge. Does not assess skills and attitudes. Assesses thinking skills inferior, knowledge, understanding and application.	20	A1 A2 A3	B2 B6 B7	C25 C26	
Project	Objectives: To assess higher thinking skills. Analysis, synthesis and evaluation are valued. The project evaluates knowledge, skills and attitudes	25	A2 A3 A4	B1 B3 B6 B7	C25 C26	D1 D2 D3
Systematic observation	Careful, rational, planned and systematic perception to describe and record the manifestations of student behaviour. It is possible to assess learning and actions and how they are carried out by evaluating order, precision, skill, efficiency... The aim is to evaluate higher thinking.	30	A1 A2 A3 A4	B1 B3 B4	C26	D1 D2 D3

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be no apt to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, the coordination and the administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Contingency plan

Description

=== EXCEPTIONAL MEASURES SCHEDULED ===
In front of the uncertain and unpredictable evolution of the sanitary alert caused by the COVID- 19, the University establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or no totally face-to-face. These already scheduled measures guarantee, in the moment that was prescriptive, the development of the teaching of a way but agile and effective when being known in advance (or with a wide in advance) by the students and the faculty through the tool normalised and institutionalised of the educational guides DOCNET.

=== ADAPTATION OF The METHODOLOGIES ===
The educational methodologies will give , to be necessary, adapting them to the telematic means that put the disposal of the faculty, in addition to the documentation facilitated through FAITIC and other platforms, email, etc.
When it was not possible to face-to-face teaching, in the measure of the possible, will prevail the teaching of the theoretical contents by telematic means as well as those contents of practices of resolution of problems, classroom of computing, and others, that can be virtualized developed by the students of way guided, tried keep the attendance presenciality for the experimental practices of laboratory, whenever the groups fulfil with the rule established in the moment by the pertinent authorities in sanitary matter and of security. In the case of not being able to be given of face-to-face form, those contents no virtualizable will give or replace by other (autonomous work guided, etc.) that allow to achieve equally the competitions associated to them.

* Educational methodologies that keep

* educational Methodologies that modify

* Mechanism no face-to-face of attention to the students (tutorials)
The tuitorials will be able to develop indistinctly of face-to-face form (whenever
it was possible to guarantee the sanitary measures) or telematic (email and others) respecting or adapting the schedules of tutorials planned. Besides, it will do an adaptation methodological to the students of risk, facilitating him additional specific information, to accredit that it can not have access to the contents given of conventional form.
* Modifications (proceed) of the contents to give

* additional Bibliography to facilitate to car-learning
Will be able to be added along the course to facilitate the self-learning

* Other modifications

=== ADAPTATION OF The EVALUATION ===
Will keep those proofs that already come making of telematic form and, in the measure of the possible, will keep the face-to-

face proofs adapting them to the valid sanitary rule. The proofs will develop of face-to-face form except Rectoral Resolution that indicates they have to do of form non face-to-face, making gave way through the distinct tools put the disposal of the professors. Those no attainable proofs of telematic form will be replaced by other (deliveries of autonomous work guided, etc.)

* Proofs already made
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Pending proofs that keep
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Proofs that modify
[previous Proof] => [new Proof]

* New proofs
does not proceed
* additional Information
keep the criteria of evaluation adapting the realisation of the proofs, in the case to be necessary and by indication in Rectoral Resolution, to the telematic means put the disposal of the teachers

Contingency plan
Description

=== EXCEPTIONAL PLANNING ===
Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering

safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

Horizontal competencies and talent management.				
Subject	Horizontal competencies and talent management.			
Code	V04M183V01110			
Study programme	M.U. Industry 4.0			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	3	Optional	1st	1st
Teaching language	Spanish Galician English			
Department				
Coordinator	Peláez Lourido, Gustavo Carlos			
Lecturers	Dosil Díaz, Joaquín Formoso Vérez, Daniel Graña Escalante, Roberto Peláez Lourido, Gustavo Carlos			
E-mail	gupelaez@uvigo.es			
Web	http://masterindustria40.webs7.uvigo.es/wordpress/			
General description	It is essential for managers in the new 4.0 industry paradigms to acquire the professional skills necessary to lead change and direct the roadmap by understanding the horizontal competencies and managing the talent of their team members			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
A4	Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner
B1	Organization and planning skills
B2	Problem solving.
B3	Descion making
B4	Information management capacity.
B5	Oral and written communication in your own language.
B7	Computer skills related to the field of study.
C33	Identify and develop key skills and abilities in multidisciplinary teams for the processes of implementation and evolution towards industry 4.0
C34	Develop skills for competency-based management of people in high-performance teams in the context of Design and Manufacturing
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork
D4	Initiative and entrepreneurial aptitudes and actitudes.

Learning outcomes	
Expected results from this subject	Training and Learning Results

Identify and develop key skills and abilities in multidisciplinary teams for the processes of implementation and evolution towards industry 4.0	A1 B1 B2 B4 B7 C33 D1 D2 D3 D4
Develop skills for competency management of people in high performance teams in the context of Design and Manufacturing industry 4.0	A2 A3 A4 B1 B2 B3 B4 B5 B7 C34 D1 D2 D3 D4

Contents	
Topic	
Evolution of the industry to the paradigms of the smart factories or 4.0: Roadmap of the digital transformation and how will affect to the human resources.	- Preliminary study of the Digital Transformation. Historical evolution. - Roadmap to the Factories of the Future: review of ideas, approaches and regulations.
Professional skills in the Connected Industry: current deficiencies, future perspectives.	- What will the work in the factories of the future be like? - New career perspectives: Skills most in demand during the digitalization process and after the transition. - Communication and Public Speaking - Leadership - Equipment management
How to drive the 4.0 paradigm implementation roadmap in the industry: opportunities, risks, preparation for change.	- Leadership skills and team management - Digital transition. Establishment, monitoring and control of the Roadmap. - Management of a Transition Project
Skills needed for change, techniques to support change: design & lean thinking, canvas and start-up models, disruptive thinking, NLP	- Entrepreneurship: capabilities for self-employment - Desgn & Lean Thinking - Startup Canvas - Disruptive Thinking - NLP
Talent management: What is talent and how can its evolution be interpreted? How is it activated, maintained and used in the industries of the future?	- What is talent and how is it interpreted in the digital transition? - How is talent activated, maintained and used in the Factories of the Future?
The values in the factory of the future: Social and human responsibility in the evolution towards industry 4.0.	- The Key Values in the Digital World - Corporate Social Responsibility - Transparency in Business - Sustainability: environmental and social aspects - Just Transition to the new industrial reality

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Case studies	Analysis of an event, issue or actual event in order to know, interpret, solve, generate hypotheses, comparing data, reflect, complete knowledge, diagnose and training in alternative dispute resolution procedures.
Debate	Open discussion between a group of students. You can focus on a topic of subject content, the analysis of a case, the outcome of a project, exercise or problem previously developed a keynote address ...
Seminars	Activity focused on the work on a specific topic, which allows to deepen or complement the contents of the subject. They can be used as a complement to the theoretical classes.
Mentored work	The student, individually or in groups, prepares a paper on the subject of matter or prepare seminars, research, memoirs, essays, summaries of readings, lectures, etc.. Generally it is an autonomous activity of the student that includes finding and collecting information, reading and literature management, writing ...
Lecturing	Presentation by the teacher of the contents on the subject under study, theoretical and / or guidelines for a job, exercise or project to be developed by the student.

Personalized assistance	
Methodologies	**Description**
Case studies	To propose a series of cases and situations. - Develop and provide a script to guide the analysis and focus the points of interest for further discussion (background material) - Correct and provide feedback to students on the process and results of the proposed activities. Even if the activities are carried out autonomously, students will have access for tutoring sessions so that teachers can follow up on the activity.
Debate	Select topics, energize the debate and evaluate the students. Revise of tests and evaluation activities. Communication of the results (publication of notes and data and/or review procedure). Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teaching staff can monitor the activity.
Seminars	Preparation of documentation to guide the individual or group development of activities. Dynamization of the session. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity.
Mentored work	Determine or propose the topic of study. Monitoring and evaluating the work, both during the process and the final result. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can monitor the activity.
Tests	**Description**
Objective questions exam	Individualized attention to students during the tests. Review of the tests and evaluation activities.
Presentation	Preparation of evaluation activities and evaluation criteria/indicators Review of evidence and evaluation activities. Communication of results (publication of notes and data and/or review procedure). Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teaching staff can monitor the activity.
Systematic observation	Preparation of a list of aspects to be evaluated. Observation of the students.

Assessment						
	Description	Qualification	Training and Learning Results			
Debate	Open talk among a group of students. Can be focused on a subject of the contents of the subject, on the analysis of a case, on the result of a project, exercise or problem previously developed in a master session... In the discussion, knowledge, skills and attitudes are evaluated. Objectives: To evaluate higher thinking (analysis and synthesis).	18	A3 A4	B1 B3 B4 B5	C33 C34	D1 D2 D3 D4
Mentored work	The students, individually or in groups, carry out activities, which can be - Monographic works, search for information in publications, databases, articles, books... on a specific topic. - Preparation of seminars, research, reports, essays, conferences, etc. - Reviews of current scientific articles. - Projects (design and development of projects). Objectives: - Acquire and consolidate knowledge - Evaluate knowledge. - Developing transversal skills and competences	15	A1 A2 A4	B1 B4 B5 B7	C33 C34	D1 D2 D3

Objective questions exam	Tests that evaluate knowledge that include closed questions with different answer alternatives (true/false, multiple choice, matching of elements...). Students select an answer from a limited number of possibilities (preferably four) with a reduction for failure of a value equal to the percentage of success (-0.25 pts. in the case of four possible answers, if the value of the question was 1 pt). The test of objective questions only evaluates knowledge. It does not evaluate skills or attitudes. It evaluates thinking skills inferior. It assesses knowledge, understanding and application.	20	A1 B2 C33 A2 B4 A3
Presentation	Exposure by the students to the teacher and/or a group of students of an aspect of the subject's contents or results of a work, exercise, project... You can carry out individually or in a group. In the presentation, knowledge, skills and attitudes are evaluated. The objectives are to evaluate higher thinking (analysis and synthesis).	17	
Systematic observation	Careful, rational, planned and systematic perception to describe and record the manifestations of student behaviour. It is possible to assess learning and actions and how they are carried out valuing order, precision, dexterity, efficiency... The aim is to evaluate higher thinking.	30	A1 B1 C33 D1 A2 B3 C34 D2 A3 B7 D3 A4 D4

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Contingency plan

Description

=== EXCEPTIONAL MEASURES SCHEDULED ===
In front of the uncertain and unpredictable evolution of the sanitary alert caused by the COVID- 19, the University establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or no totally face-to-face. These already scheduled measures guarantee, in the moment that was prescriptive, the

development of the teaching of a way but agile and effective when being known in advance (or with a wide in advance) by the students and the faculty through the tool normalised and institutionalised of the educational guides DOCNET.

=== ADAPTATION OF The METHODOLOGIES ===
The educational methodologies will give , to be necessary, adapting them to the telematic means that put the disposal of the faculty, in addition to the documentation facilitated through FAITIC and other platforms, email, etc.
When it was not possible to face-to-face teaching, in the measure of the possible, will prevail the teaching of the theoretical contents by telematic means as well as those contents of practices of resolution of problems, classroom of computing, and others, that can be virtualized developed by the students of way guided, tried keep the attendance presenciality for the experimental practices of laboratory, whenever the groups fulfil with the rule established in the moment by the pertinent authorities in sanitary matter and of security. In the case of not being able to be given of face-to-face form, those contents no virtualizable will give or replace by other (autonomous work guided, etc.) that allow to achieve equally the competitions associated to them.

* Educational methodologies that keep

* educational Methodologies that modify

* Mechanism no face-to-face of attention to the students (tutorials)
The tuitorials will be able to develop indistinctly of face-to-face form (whenever it was possible to guarantee the sanitary measures) or telematic (email and others) respecting or adapting the schedules of tutorials planned. Besides, it will do an adaptation methodological to the students of risk, facilitating him additional specific information, to accredit that it can not have access to the contents given of conventional form.
* Modifications (proceed) of the contents to give

* additional Bibliography to facilitate to car-learning
Will be able to be added along the course to facilitate the self-learning

* Other modifications

=== ADAPTATION OF The EVALUATION ===
Will keep those proofs that already come making of telematic form and, in the measure of the possible, will keep the face-to-face proofs adapting them to the valid sanitary rule. The proofs will develop of face-to-face form except Rectoral Resolution that indicates they have to do of form non face-to-face, making gave way through the distinct tools put the disposal of the professors. Those no attainable proofs of telematic form will be replaced by other (deliveries of autonomous work guided, etc.)

* Proofs already made
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Pending proofs that keep
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Proofs that modify
[previous Proof] => [new Proof]

* New proofs
does not proceed
* additional Information
keep the criteria of evaluation adapting the realisation of the proofs, in the case to be necessary and by indication in Rectoral Resolution, to the telematic means put the disposal of the teachers

General description	More than one million jobs in STEM (Science, Technology, Engineering and Mathematics) profiles will be created in the next four years in Spain, according to estimates by the Spanish Association for Digitalization, DigitalES. The last letter of the acronym is where this subject is headed. Mathematics is a catalyst discipline for the transition to the Fourth Industrial Revolution. They were an essential tool in many fields of the past, are on the present and will be in the future. Maths, in fact, command in some way the ship of the new digital age. And the fact is that, although the main work of mathematics is to make people think, its applications are fundamental in the world of the real and palpable. Therefore, it is important to highlight the importance and role of this discipline in the new era of digitalisation. In this subject we have focused on two main areas of action: - On the one hand, the application of Differential Equations in Engineering, implementation of numerical integration algorithms in mathematical software environments. The application can be made multiple problems, among them those related to manufacturing processes. - On the other hand, the second major application that will study mathematics within the scope of Industry 4.0 is called 'topological data analysis' and deals with how to analyze large data, trying to understand what information can be extracted from a site and the different ways in which the data is shaped. This is a field where Big Data and Machine Learning represent recent fields of great actuality and demand of professionals for the jobs of the future. In this section these techniques will be applied to problems of Industrial Organization such as Resource Allocation or routes.			

Competencies

Code	
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
B2	Problem solving.
B4	Information management capacity.
B7	Computer skills related to the field of study.
C31	Know the advanced computer tools for mathematical calculation and their use in design and manufacturing engineering applications
C32	Select and apply advanced calculation tools for solving mathematical problems in the field of design engineering and manufacturing
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources

Learning outcomes

Expected results from this subject	Training and Learning Results

The student knows for what, in which tasks and how the advanced software tools of mathematical calculation can be used, in the industrial environment.	A3 B2 B4 B7 C31 D1 D2
The student acquires the necessary skills in the use of advanced mathematical calculation software environments to pose and solve engineering problems in industry.	A2 B2 B7 C31 D1 D2
The student acquires basic and advanced skills in programming languages for scientific use.	A2 B2 B7 C31 C32 D1 D2
The student is able to use programming languages for problem solving in engineering.	A2 B2 B4 B7 C32 D1 D2
El/La estudiante diagnostica problemas y propone soluciones con herramientas de cálculo y cómo se deben integrar estas en los procesos orientados a la implantación de paradigmas 4.0	A2 A3 B4 C32 D1 D2

Contents	
Topic	
1.- Differential Equations applied in Engineering	Implementation of numerical integration algorithms of differential equations in mathematical software environments. Application to different types of problems related to manufacturing processes.
2.- Implementation of Algorithms for the Industry 4.0	Study problems in the production organization environment by reviewing algorithms, implementing them and applying them in real situations in the context of Industry 4.0

Planning			
	Class hours	Hours outside the classroom	Total hours

Presentation	0.5	2	2.5
Systematic observation	1	0	1
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Problem solving	Activity in which problems and/or exercises related to the subject are formulated. The student must develop the appropriate solutions by means of the execution of routines, the application of formulas or algorithms, the application of procedures of transformation of the available information and the interpretation of the results. It is usually used as a complement to a master class.
Practices through ICT	Activities for applying knowledge to specific situations and acquiring basic and procedural skills related to the subject matter. They are developed through ICTs in an autonomous way.
Project based learning	Carrying out activities that allow the interaction of several subjects and train students in teamwork, with open problems. They allow to form, among others, the capacities of learning in cooperation, leadership, organization, communication and strengthening of the interpersonal relations.

Lecturing	Presentation by the teacher of the contents on the subject of study, theoretical bases and/or guidelines of a work, exercise or project to be developed by the student.

Personalized assistance

Methodologies	Description
Problem solving	The teachers propose, guide, review and correct the approach and resolution of problems and/or exercises individually or in groups. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can control the activity.
Practices through ICT	Develop and provide a script to guide the resolution of the problem or activities. To carry out the follow-up evaluation of the activities. Control and individual evaluation of activities. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can control the activity.
Project based learning	Design a real project that allows students to deepen their skills. Control and individual evaluation of activities. Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teachers can control the activity.
Tests	**Description**
Objective questions exam	Individualized attention to students during the tests. Review of tests and evaluation activities.
Presentation	Preparation of evaluation activities and evaluation criteria/indicators Review of evidence and evaluation activities. Communication of results (publication of notes and data and/or review procedure). Even if the activities are carried out autonomously, the students will have tutorial sessions at all times so that the teaching staff can monitor the activity.
Systematic observation	Preparation of a list of aspects to be evaluated. Observation of the students.

Assessment

	Description	Qualification	Training and Learning Results
Problem solving	Test in which students must solve a series of problems and/or exercises in a time/conditions established by the teacher. In this way, students must apply the knowledge they have acquired. Different tools can be used to apply this technique such as, for example, chat, mail, forum, audio conference, video conference, etc. Problem solving evaluates knowledge and skills, but not attitudes.	15	A2 B2 C32 B4 B7
Project based learning	Presentation of a project by a group or individually Objectives: To evaluate higher thinking. Analysis, synthesis and evaluation are valued. The project evaluates knowledge, skills and attitudes.	20	A2 B4 C31 D1 A3 B7 C32 D2
Objective questions exam	Tests that evaluate knowledge that include closed questions with different answer alternatives (true/false, multiple choice, matching of elements...). Students select an answer from a limited number of possibilities (preferably four) with a reduction for failure of a value equal to the percentage of success (-0.25 pts. in the case of four possible answers if the value of the question is 1 pt). The test of objective questions only evaluates knowledge. It does not evaluate skills or attitudes. It evaluates skills of inferior thinking. It assesses knowledge, understanding and application.	20	A2 B7 C31 A3
Presentation	Presentation by the students to the teacher and/or a group of students of an aspect on the contents of the subject or the results of a work, exercise, project... It can be carried out individually or in a group. In the presentation, knowledge, skills and attitudes are evaluated. The objective is to evaluate higher thinking (analysis and synthesis).	15	A2 B4 C31 D1 C32 D2
Systematic observation	Careful, rational, planned and systematic perception to describe and record the manifestations of student behaviour. It is possible to assess learning and actions and how they are carried out valuing order, precision, dexterity, efficiency... The aim is to evaluate higher thinking.	30	A2 B2 C31 D1 A3 B4 C32 D2 B7

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the

type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

* additional Bibliography to facilitate to car-learning
Will be able to be added along the course to facilitate the self-learning

* Other modifications

=== ADAPTATION OF The EVALUATION ===
Will keep those proofs that already come making of telematic form and, in the measure of the possible, will keep the face-to-face proofs adapting them to the valid sanitary rule. The proofs will develop of face-to-face form except Rectoral Resolution that indicates they have to do of form non face-to-face, making gave way through the distinct tools put the disposal of the professors. Those no attainable proofs of telematic form will be replaced by other (deliveries of autonomous work guided, etc.)

* Proofs already made
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Pending proofs that keep
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Proofs that modify
[previous Proof] => [new Proof]

* New proofs
does not proceed
* additional Information
keep the criteria of evaluation adapting the realisation of the proofs, in the case to be necessary and by indication in Rectoral Resolution, to the telematic means put the disposal of the teachers

IDENTIFYING DATA				
Industrial Internet of Things (IIoT)				
Subject	Industrial Internet of Things (IIoT)			
Code	V04M183V01201			
Study programme	M.U. Industry 4.0			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	4.5	Mandatory	1st	2nd
Teaching language	Spanish Galician English			
Department				
Coordinator	Garrido Campos, Julio			
Lecturers	Garrido Campos, Julio			
E-mail	jgarri@uvigo.es			
Web	http://masterindustria40.webs7.uvigo.es/wordpress/			
General description	The problem of access to machine information is a key aspect within the digitization of industrial processes promoted by the Industry 4.0 paradigm, and it is the IIoT technologies that lead to its implementation. With these technologies it is possible to connect ubiquitously with a controller and access a series of variables. The course uses an industrial approach when analyzing the different methodologies to access data of the industrial process. It focuses on giving a clear vision of the architectures used that are having a greater impact in the framework of Industry 4.0. To this end, all the elements involved in the chain of transmission and exploitation of industrial data will be analysed: the different hardware architectures, software communication resources and the most used data protocols (MQTT, AMQP, OPC UA), and finally, their storage. With this, students should have a clear idea of what strategy and methodology is currently used when implementing data access in industrial environments.			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A5	Students have got the learning skills that will enable them to continue studying in a largely self-directed or autonomous manner
B1	Organization and planning skills
B2	Problem solving.
B7	Computer skills related to the field of study.
C9	Know the principles, techniques and systems that comprise the concept of Industrial Internet of Things (IIoT) and its relationship with design and manufacturing
C10	Knowing how to implement robust, flexible and fault-tolerant industrial control systems, through data acquisition and decision making systems appropriate to each situation.
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork

Learning outcomes	
Expected results from this subject	Training and Learning Results
To know the principles, techniques and systems that comprise the concept of Industrial Internet of Things (IIoT).	A1 B7 C9
To know the application of the IIoT in the design and the manufacture in the frame of the Industry 4.0	A1 A2 C9 C10
Know the robust, reliable and fault-tolerant control systems best suited for applications in Industry 4.0.	A1 A2 B1 B2

Implement data acquisition and decision making systems based on IIoT in manufacturing and supply chain contexts	A2 A5 B1 C10 D1 D2 D3
Apply control systems for real time decision making in Industry 4.0 contexts.	A2 B1 B2 C10

Contents	
Topic	
1. Industrial Internet of Things in Industry 4.0.	1.1 Introduction to IIoT. Historical evolution. 1.2 Technological alternatives
2. Nature, principles, techniques and systems associated with IIoT	2.1 IIoT Architectures 2.2 IIoT Hardware devices 2.3 IIoT Protocols
3. IIoT applied to design and manufacture.	3.1. Control systems in the context of Industry 4.0. 3.2. IIoT systems in production facilities 3.3. IIoT systems in the supply chain

Planning			
	Class hours	Hours outside the classroom	Total hours
Problem solving	9	21	30
Laboratory practical	5	15	20
Project based learning	4	16	20
Lecturing	14	25	39
Objective questions exam	0.5	3	3.5
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Problem solving	Execution of exercises based on real cases, with audiovisual support
Laboratory practical	Activities to apply the knowledge acquired in theory classes to certain situations that can be developed in the subject's laboratory
Project based learning	The students, individually, will have to design and implement a system (or a part of it) proposed by the teacher applying the knowledge and skills acquired as a result of the master sessions, the laboratory practices and the personal work of the student.
Lecturing	Presentation by the teacher of the contents of the subject.

Personalized assistance	
Methodologies	**Description**
Laboratory practical	Develop and provide a script to guide the resolution of the problem or activities. Monitoring and evaluating the activities.
Project based learning	Design a real project that allows the students to improve their skills
Tests	**Description**
Objective questions exam	- Review of evidence and evaluation activities. - Communication of results (publication of grades and data and/or review procedure)

Assessment					
	Description	Qualification	Training and Learning Results		
Laboratory practical	It is necessary to exceed 50% of the assessment to pass the course. There will be continuous evaluation.	30	B2 B7	C10	D1 D2 D3
Project based learning	It is necessary to exceed 50% of the assessment to pass the course. There will be continuous evaluation.	50	B1 B7	C9 C10	

Objective questions exam	Tests that evaluate knowledge that include closed questions with different answer alternatives (true/false, multiple choice, matching of elements...). Students select an answer from a limited number of possibilities. The test of objective questions evaluates knowledge. It does not evaluate skills or attitudes. Objectives: To assess lower thinking skills. Assesses knowledge, understanding and application.	20	A1 B1 C9 A2 B2 A5

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Contingency plan

Description

Given the uncertainty in the evolution of the health alert caused by the COVID-19, the University has established an extraordinary planning that will be activated at the time when the administrations and the institution itself determine it, based on criteria of safety, health and responsibility, to guarantee teaching in a non-attendance or partially attendance framework. The provision of these measures guarantees, at the required time, the development of teaching in a more agile and effective way, since they are known in advance by students and teachers through the standardised and institutionalised tool of the DOCNET teaching guides.

In accordance with the instructions received from the Vice-Rector's Office of Academic Planning and Teaching, the three scenarios listed below must be taken into account, with their corresponding levels of contingency:

SCENARIO 1. Face-to-face mode.
All teaching will be carried out in a face-to-face manner, both for theoretical and practical classes, in the usual way contemplated for the subject in the years prior to 2020.

SCENARIO 2. Blended learning
In the case of the activation by the university authorities of this modality of mixed education, such a circumstance would imply a reduction in the capacity of the spaces habitually used for teaching in the classroom modality, for which the centre will first communicate to the teachers of the subject information regarding the new capacity authorised for the teaching spaces, so that the reorganisation of the training activities can proceed during the rest of the term. It should be noted that the reorganization to be carried out will depend on the time (during the semester) when the said teaching modality is activated. The reorganization of the teaching will be carried out in accordance with the following guide:

Ia) Communication. All students will be informed through the FAITIC platform of the specific conditions in which the training activities and other evaluation tests will be carried out to end the semester.

*b) Adaptation of the tutorials and personalised attention. Tutorial sessions may be carried out by telematic means (e-mail, videoconference, virtual rooms, FAITIC forums, etc.), if this has been the case, after arranging a date and time, in the professors' virtual offices.

c) Presential and non-presential activities. Those training activities that can be carried out by all the students in a face-to-face way will be indicated (prioritizing as far as possible practical activities) and those training activities that will be carried out remotely (theoretical classes are often those that reduce least their efficiency with this modality), with the purpose of planning their effective performance.

d) Contents to be taught and learning objectives The contents and learning objectives will not be modified as a consequence of this teaching mode.

y) Programming of teaching. Class schedules and calendars and the different activities of the subject are maintained.

f) Bibliography or additional material to facilitate self-learning. The teaching staff will provide students with the necessary teaching material to meet the support needs of the students for the subject, according to the circumstances existing at any given time, through the FAITIC platform.

g) Evaluation. Tests are not modified. The type of tests are maintained, adapting their performance to the circumstances of each moment. The weight of these tests may be changed, after informing the students.

h) For the performance of *practice *and *work/*virtual projects, the free software that students must have installed in their personal computers will be indicated.

As for the tools to be used in the training activities to be carried out in non-attendance mode, the Remote Campus and FAITIC platforms will be used, which may be complemented with other solutions to meet specific needs that may arise over the period.

SCENARIO 3. Non-presential mode
In the event that the totally non-attendance teaching modality is activated (suspension of all attendance training and evaluation activities), the platforms available at the University of Vigo will be given priority: Remote Campus and FAITIC. The conditions of the reorganization to be carried out will depend on the moment during the semester in which the said teaching modality is activated. This reorganization of the teaching will be carried out in accordance with the following guide:

a) Communication. All students of the subject will be informed through the FAITIC platform of the specific conditions in which the training activities and other evaluation tests will be carried out in order to complete the semester

General description	This course aims to train students in the selection of modeling and simulation tools applied to design and manufacturing processes, taking into account the specific circumstances in the Industry 4.0 paradigm framework. The subject will provide students with the experience in the use of different modeling and simulation tools for industrial systems and components, allowing them to analyze their capabilities and limitations, ending with the elaboration of benchmarkings between different solutions and the elaboration of specifications for the selection of an optimal proposal.			

Competencies	
Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
B1	Organization and planning skills
B2	Problem solving.
B7	Computer skills related to the field of study.
C21	To know and be able to use modeling and simulation tools by finite elements, finite differences and computerized fluid dynamics (CFD) as tools of Assisted Engineering (CAE)
C22	Select the appropriate finite element difference (FEM) and computerized fluid dynamics (CFD) modeling and simulation tools to solve design and manufacturing engineering problems
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork

Learning outcomes	
Expected results from this subject	Training and Learning Results
Knowing different modeling and simulation tools such as finite elements (FEM), finite difference (FDM) and computerized fluid dynamics (CFD).	A1 B2 B7 C21 D2
Applying different modeling and simulation techniques such as finite elements (FEM), finite differences (FDM) and computerized fluid dynamics (CFD) as Assisted Engineering (CAE) tools.	A3 B2 B7 C21 D2 D3

Selecting the most appropriate modeling and simulation tools for solving specific design and manufacturing engineering problems in the context of Industry 4.0.	A1 A3 B1 B2 C22 D1 D3

Contents	
Topic	
1. Introduction to the simulation of components and processes.	1.1. Models and simulation. 1.2. Tools for component simulation. 1.3. Tools for process simulation.
2. The role of modelling and simulation in Industry 4.0.	2.1. Purposes of modelling and simulation. 2.2. Strategies for modelling and simulation in Industry 4.0.
3. Finite Element Modeling and simulation (FEM).	3.1. Fundamentals and concepts in FEM techniques. 3.2. Applications of FEM tools in Engineering. 3.3. FEM tools for mechanical modelling and simulation. 3.4. Applications of FEM tools in Industry 4.0. 3.5. Selection of FEM tools in Industry 4.0.
4. Finite difference modeling and simulation (FDM): techniques, tools, concepts and applications.	4.1. Fundamentals and concepts in FDM techniques. 4.2. Applications of FDM tools in Engineering. 4.3. FDM tools for modelling and simulation of manufacturing processes. 4.4. Applications of FDM tools in Industry 4.0.
5. Modeling and simulation with computerized fluid dynamics (CFD).	5.1. Fundamentals and concepts in CFD techniques. 5.2. Applications of CFD tools in Engineering. 5.3. CFD tools for mechanical modelling and simulation. 5.4. Applications of CFD tools in Industry 4.0.
6. Selection of modeling and simulation tools for design and manufacturing.	6.1. Assessment of modelling and simulation needs in the design and manufacturing Engineering processes. 6.2. Performance analysis of modelling and simulation systems. 6.3. Methodology for the selection of modelling and simulation systems.
Practical exercise nr. 1.	Elaboration of a FEM study for the detail design engineering stage of an industrial product.
Practical exercise nr. 2.	Elaboration of an FDM study for the manufacturing engineering stage of an industrial product.
Practical exercise nr. 3.	Elaboration of a CFD study for the detail design engineering stage of an industrial product.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	9	16	25
Autonomous problem solving	9	16	25
Practices through ICT	13	32.5	45.5
Project based learning	2	12	14
Objective questions exam	1	0	1
Presentation	1	0	1
Systematic observation	1	0	1
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Lecturing	Presentation by the lecturer of the contents on the subject of study, its theoretical bases and/or guidelines of a work or exercise that the student has to develop.
Autonomous problem solving	Activity in which problems and/or exercises related to the subject are formulated. The student must develop the analysis and resolution of the problems and/or exercises in an autonomous way.
Practices through ICT	Activities for the application of knowledge in a given context and the acquisition of basic and procedural skills in relation to the subject through ICT tools.
Project based learning	To carry out activities that allow the cooperation of several subjects and confront the students, working in teams, with open problems. They will allow to hone, among others, the capabilities for cooperative learning, leadership, organization, communication and strengthening of personal relationships.

Personalized assistance

Methodologies	Description
Autonomous problem solving	Activity in which problems and/or exercises related to the subject are formulated. The student must develop the analysis and resolution of the problems and/or exercises in an autonomous way. For all the teaching modalities contemplated in the Contingency Plan, the tutoring sessions may be carried out by telematic means (e-mail, videoconference, FAITIC forums, etc.) under the modality of prior arrangement of virtual place, date and time.
Practices through ICT	Activities for the application of knowledge in a given context and the acquisition of basic and procedural skills in relation to the subject through ICT tools. For all the teaching modalities contemplated in the Contingency Plan, the tutoring sessions may be carried out by telematic means -e-mail, videoconference, FAITIC forums, etc.- under the modality of prior arrangement of virtual place, date and time.
Project based learning	Carrying out activities that allow the cooperation of several subjects so the students confront, working in teams, some open problems. They will allow to train, among others, the capabilities for cooperative learning, leadership, organization, communication and the strengthening of personal relationships. For all the teaching modalities contemplated in the Contingency Plan, the tutoring sessions may be carried out by telematic means -e-mail, videoconference, FAITIC forums, etc.- under the modality of prior arrangement of virtual place, date and time.

Assessment

	Description	Qualification	Training and Learning Results			
Objective questions exam	Tests composed of objective questions. Mid-term and final objective tests.	40	A1	B1 B7	C21	D2
Presentation	Presentations. Assignments. Projects. Laboratory work reports.	40	A1 A3	B1 B2	C21 C22	D1 D2 D3
Systematic observation	Systematic observation. Complementary activities of continuous assessment.	20	A3	B2		D1 D3

Other comments on the Evaluation

Students who do not pass the subject in continuous training at the first opportunity of each academic year, in which the distribution of evaluation weights is as stablished above, will have the possibility of having an exam of objective questions, worth 100% of the final mark, in successive calls that are not the first opportunity of each academic year.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Recommendations

Other comments

The communication with the students will be made through the FAITIC distance learning platform, for which it will be necessary that the student accesses the course space in the platform previously to the start of the lecturing period.

Before the realisation of the evaluation tests, it is recommended that the students consult with the FAITIC platform to confirm the tests' date, place, recommendations, etc., as well as the needs regarding using manuals or any another material for carrying out the tests and elaborating the home assignment works.

Contingency plan

Description

In the face of the uncertain and unforeseeable evolution of the health alert caused by COVID-19, University of Vigo has established an exception planning that will be activated at the time the government offices and the own University mandate it. Such decision will be made based on safety, health and responsibility criteria, always guaranteeing the continuity of the teaching processes in a partial or full non-classroom scenario. Those already-planned steps will guarantee, at the moment it is required, the development of the teaching processes in a more streamlined and effective way as both the students and the lecturers will know about them beforehand (or with a broad anticipation), by means of the DOCNET standard institutional tool.

According to the instructions provided by the Vice-Rectorate for Learning Organization and Teaching Staff, the following three scenarios are required to be taken into account with their corresponding contingency level:

SCENARIO 1. Full-classroom modality.

All teaching activities will be carried out at the classroom, both for theory and laboratory classes, according to the typical way for the course in the years before 2020.

SCENARIO 2. Half-classroom modality.

In the case the half-classroom teaching modality is activated by the University government, such event will involve a reduction in the capacity of the usual teaching spaces where the full-classroom modality is developed. Because of that, as a first measure the School will provide the teaching staff of the course with the information regarding the new authorized capacities for such teaching spaces so that the teaching activities can be re-organized for the remaining time of the term. It must be pointed out that the necessary re-organization to implement will depend on the specific moment in the term in which this teaching modality is activated. The following guidelines will be followed in the re-organization or the teaching activities:

a) Communication. All students in the course will be informed through the FAITIC teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, video-call, FAITIC forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers virtual offices.

c) Classroom and non-classroom activities. From the teaching activities that remain until the end of the term, those that could be carried out by all students in class need to be identified (prioritizing laboratory activities when possible), and those other that will be carried out remotely (theory classes are the ones that usually decrease in effectiveness less in this modality), to the effects of the planning of its efficient performance.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the FAITIC portal.

With regard to the tools used for the teaching activities in the non-classroom modality, the CAMPUS REMOTO and FAITIC portals will be of preferential use, complemented if necessary with other solutions in order to address specific needs arising along the lecturing period.

SCENARIO 3. Non-classroom modality.

In the case the full non-classroom modality (discontinuation of all on-class learning and evaluation activities) is activated, the tools offered by the platforms currently available at University of Vigo -CAMPUS REMOTO and FAITIC- will be of preferent use. The specific conditions for the reo-organization to be carried out will depend of the particular time in the term in which such modality is mobilized. The following guidelines will be followed in the re-organization of the teaching activities:

a) Communication. All students in the course will be informed through the FAITIC teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation and/or modification of the teaching methodologies. Even if the teaching methodologies for the course were fundamentally conceived towards the full-classroom modality, the teaching staff considers that they keep in essence their effectiveness in the non-classroom modality. That is why it is proposed to keep them as they are, even if special attention will be payed to their right development and results. Therefore, no changes will be made to the teaching methodologies initially defined for the course.

c) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, video-call, FAITIC forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers virtual offices.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Evaluation. No changes will be made neither to the evaluation tests, nor to their corresponding score weights, nor to their set dates.

g) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the FAITIC portal.

General description	Compulsory subject through which students carry out a period of practice in companies, technology centres or institutions, which allows them to develop practical skills and make contact with the reality of industrial agents by integrating into their teams within activities and / or projects related to the subjects of the master.			

Competencies	
Code	
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
A4	Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner
B1	Organization and planning skills
B2	Problem solving.
B3	Descion making
B4	Information management capacity.
B5	Oral and written communication in your own language.
B6	Knowledge and use of the English language.
B7	Computer skills related to the field of study.
C1	Knowing the concepts of product life cycle to learn how to apply them with an integral approach, with sustainability criteria through software tools and infrastructure and digital media.
C2	To know and apply the principles and tools of Lean Manufacturing in the processes of design and development of products of the Industry 4.0 to materialize proposals of innovation through concurrent engineering and ICT of collaborative engineering.
C3	Learn the basics of cloud computing, components, tools and its orientation as an Internet-based service.
C4	Know and apply tools and techniques to capture, store, smart analysis and visualize massive data.
C5	To know and know how to implement in the factories the architectures, technologies and protocols used in communication systems and local industrial networks.
C6	Knowing the role of cyber security in the factories of the future, the methods, techniques and limitations to be able to implement safe industrial infrastructures.
C7	To know the fundamentals of Artificial Intelligence and its most important practical applications for its implementation in the design and manufacturing processes.
C8	Know how to use artificial intelligence methods to model, design and develop applications based on reasoning and inference engines to be implemented in the Industry.
C9	Know the principles, techniques and systems that comprise the concept of Industrial Internet of Things (IIoT) and its relationship with design and manufacturing
C10	Knowing how to implement robust, flexible and fault-tolerant industrial control systems, through data acquisition and decision making systems appropriate to each situation.
C11	Know and use the elements and principles of operation of cyberphysical systems resulting from the integration of physical, computational and communication processes.

C12	Develop cyberphysical systems for application to product and process solutions in factories, using Systems Engineering procedures.
C13	Use the integration of different data sources for the definition of flexible, reliable and efficient supply chain management systems, supported by the Industrial Internet of Things and optimized logistics management software tools
C14	Know the concepts, principles and tools of intelligent manufacturing systems, which facilitate access to information and production data through automated tools for capturing, processing and displaying information
C15	To know and apply the additive manufacturing technologies, the materials used and the application strategies in the design and manufacture of products.
C16	Develop models, mock-ups and prototypes using additive manufacturing techniques and tools
C17	Know the advanced techniques and tools of metrology, calibration and accreditation.
C18	Develop advanced dimensional verification strategies for application to components and products in the connected industry
C19	To know, use and know how to implement principles, applications, components, instrumentation and installations of advanced robotic systems for industry.
C20	To know and know how to apply principles, techniques and equipment of immersion in virtual, augmented and hybrid reality for its implementation in the industry
C21	To know and be able to use modeling and simulation tools by finite elements, finite differences and computerized fluid dynamics (CFD) as tools of Assisted Engineering (CAE)
C22	Select the appropriate finite element difference (FEM) and computerized fluid dynamics (CFD) modeling and simulation tools to solve design and manufacturing engineering problems
C23	Know and select the most suitable advanced CAD/CAM/CAE environments to be integrated and implemented in the Industry.
C24	Knowing how to apply advanced design, manufacturing and engineering tools to the modeling and manufacturing of complex mechanical parts and assemblies in the industry
C25	Know and be able to use techniques and tools for mathematical modeling and simulation of discrete event systems and dynamic systems for application in production environments.
C26	Apply simulation tools to solve specific problems in plant management and integrate them into the implementation process of the 4.0 paradigms.
C27	To know and apply the engineering techniques and tools for the industrialization of the product in Lean contexts
C28	Developing strategies for the use of innovation capacity in design and manufacturing in industrial companies
C29	To know and integrate rigorously the procedures and techniques necessary for the elaboration and implementation of research, development and innovation projects in the context of Industry 4.0
C30	To develop critical/self-critical and communication skills in a research project, with excellence and quality criteria in national and international fields
C31	Know the advanced computer tools for mathematical calculation and their use in design and manufacturing engineering applications
C32	Select and apply advanced calculation tools for solving mathematical problems in the field of design engineering and manufacturing
C33	Identify and develop key skills and abilities in multidisciplinary teams for the processes of implementation and evolution towards industry 4.0
C34	Develop skills for competency-based management of people in high-performance teams in the context of Design and Manufacturing
D1	Ability to understand the meaning and application of the gender perspective in different areas of knowledge and in professional practice with the aim of achieving a more just and equal society
D2	Incorporate criteria of sustainability and environmental commitment into professional practice. To acquire skills in the equitable, responsible and efficient use of resources
D3	Multidisciplinary teamwork

Learning outcomes

Expected results from this subject	Training and Learning Results
The student is exposed to real situations in the company to experience and channel his professional potential	A3 A4 B4 B5 B6 C33 C34 D1 D2 D3

The student has to integrate in multidisciplinary teams.	A3 A4 B4 B5 B6 C34 D1 D2 D3
The student recognizes and adapts to the different levels and types of work environment to which he or she is exposed.	A3 A4 B1 B4 B5 B6 B7 C33 C34 D1 D2 D3
The student interacts with the teams where he or she integrates with professional criteria of responsibility and autonomy at work.	A2 A3 A4 B1 B2 B3 B4 B5 B6 B7 C1 C2 C3 C4 C5 C6 C7 C8 C9 C10 C11 C12 C13 C14 C15 C16 C17 C18 C19 C20 C21 C22 C23 C24 C25 C26 C27 C28 C29 C30 C31 C32 C33 C34 D1 D2 D3

Contents	
Topic	
Previous activities to the allocation of the destination	- Preparation of CV - Interview with the personnel of the máster commissioned of the external practices - Interview with the responsible personnel of the institution or company where will be developed the practices.
Allocation of destination	- Allocation of Activities and preparation of Dossier - Identification and Allocation of functions to develop
Realisation of the period/s of practices:	- Integration in a group of work - development of activities during the stay that have relation with the subjects and aims of the máster. - Preparation of a dossier of activities made and functions exerted.

Methodologies	
	Description
Practicum, External practices and clinical practices	The student develops the activities in a context related to the exercise of his/her professional career, during a determined period, carrying out the functions assigned and foreseen in the internship proposal. Objectives: - To reflect on professional practice. - To put knowledge and skills into practice in a real professional environment. Mode: Guided. Nature: Practical. Scenario: They are developed in external non-academic spaces (companies, institutions, technological centres, laboratories, ...) of academic-professional interest for the students. Groups: Individual During the activity, the students will collect data, carry out personal interviews... depending on the activity itself and what the teachers request. Write a report of the practices.

Personalized assistance	
Methodologies	**Description**
Practicum, External practices and clinical practices	To put students in contact with companies, institutions,... so that they can do the internship. To follow up the activities and transmit observations to the students once the internship is over. Control and Evaluation of the internship.
Tests	**Description**
Report of practices, practicum and external practices	- Preparation of evaluation activities and evaluation criteria/indicators - Review of the evidence of the evaluation activities. - Communication of the results (publication of notes and data and/or review procedure)

Assessment		
Description	Qualification	Training and Learning Results

Report of practices, practicum and external practices	Preparation of a report by the student reflecting the characteristics of the work carried out. The students must describe the tasks and procedures developed, show the results obtained or observations made, as well as the analysis and treatment of data. The report evaluates knowledge, skills and attitudes. Objectives: To evaluate higher thinking. Analysis, synthesis and evaluation are valued.	100	A2 A3 A4	B1 B2 B3 B4 B5 B6 B7	C1 C2 C3 C4 C5 C6 C7 C8 C9 C10 C11 C12 C13 C14 C15 C16 C17 C18 C19 C20 C21 C22 C23 C24 C25 C26 C27 C28 C29 C30 C31 C32 C33 C34	D1 D2 D3

Contingency plan

Description

=== EXCEPTIONAL MEASURES SCHEDULED ===

In front of the uncertain and unpredictable evolution of the sanitary alert caused by the COVID- 19, the University establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face

stage or no totally face-to-face. These already scheduled measures guarantee, in the moment that was prescriptive, the development of the teaching of a way but agile and effective when being known in advance (or with a wide in advance) by the students and the faculty through the tool normalised and institutionalised of the educational guides DOCNET.

=== ADAPTATION OF The METHODOLOGIES ===
The educational methodologies will give , to be necessary, adapting them to the telematic means that put the disposal of the faculty, in addition to the documentation facilitated through FAITIC and other platforms, email, etc.
When it was not possible to face-to-face teaching, in the measure of the possible, will prevail the teaching of the theoretical contents by telematic means as well as those contents of practices of resolution of problems, classroom of computing, and others, that can be virtualized developed by the students of way guided, tried keep the attendance presenciality for the experimental practices of laboratory, whenever the groups fulfil with the rule established in the moment by the pertinent authorities in sanitary matter and of security. In the case of not being able to be given of face-to-face form, those contents no virtualizable will give or replace by other (autonomous work guided, etc.) that allow to achieve equally the competitions associated to them.

* Educational methodologies that keep

* educational Methodologies that modify

* Mechanism no face-to-face of attention to the students (tutorials)
The tuitorials will be able to develop indistinctly of face-to-face form (whenever
it was possible to guarantee the sanitary measures) or telematic (email and others) respecting or adapting the schedules of tutorials planned. Besides, it will do an adaptation methodological to the students of risk, facilitating him additional specific information, to accredit that it can not have access to the contents given of conventional form.
* Modifications (proceed) of the contents to give

* additional Bibliography to facilitate to car-learning
Will be able to be added along the course to facilitate the self-learning

* Other modifications

=== ADAPTATION OF The EVALUATION ===
Will keep those proofs that already come making of telematic form and, in the measure of the possible, will keep the face-to-face proofs adapting them to the valid sanitary rule. The proofs will develop of face-to-face form except Rectoral Resolution that indicates they have to do of form non face-to-face, making gave way through the distinct tools put the disposal of the professors. Those no attainable proofs of telematic form will be replaced by other (deliveries of autonomous work guided, etc.)

* Proofs already made
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Pending proofs that keep
Proof *XX: [previous Weight 00%] [Weight Proposed 00%]
...

* Proofs that modify
[previous Proof] => [new Proof]

* New proofs
does not proceed
* additional Information
keep the criteria of evaluation adapting the realisation of the proofs, in the case to be necessary and by indication in Rectoral Resolution, to the telematic means put the disposal of the teachers

General description	Elaboration, presentation and defence, after all the credits of the syllabus have been obtained, of an original piece of work made individually, in front of an university board. That work that will have a sufficient entity and will address a problem, development, study, etc. related to the Industry 4.0 paradigm and its facllitating technologies, with a professional approach, and in which the competitions acquired in the courses coalesce.			

Competencies	
Code	
A2	Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	Students are able to integrate knowledge and deal with the complexity of making judgements based on information which, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
A4	Students should be able to communicate their findings - and the ultimate knowledge and reasons behind them - to specialist and non-specialist audiences in a clear and unambiguous manner
B1	Organization and planning skills
B2	Problem solving.
B3	Descion making
B4	Information management capacity.
B5	Oral and written communication in your own language.
B6	Knowledge and use of the English language.
B7	Computer skills related to the field of study.
C1	Knowing the concepts of product life cycle to learn how to apply them with an integral approach, with sustainability criteria through software tools and infrastructure and digital media.
C2	To know and apply the principles and tools of Lean Manufacturing in the processes of design and development of products of the Industry 4.0 to materialize proposals of innovation through concurrent engineering and ICT of collaborative engineering.
C3	Learn the basics of cloud computing, components, tools and its orientation as an Internet-based service.
C4	Know and apply tools and techniques to capture, store, smart analysis and visualize massive data.

C5	To know and know how to implement in the factories the architectures, technologies and protocols used in communication systems and local industrial networks.
C6	Knowing the role of cyber security in the factories of the future, the methods, techniques and limitations to be able to implement safe industrial infrastructures.
C7	To know the fundamentals of Artificial Intelligence and its most important practical applications for its implementation in the design and manufacturing processes.
C8	Know how to use artificial intelligence methods to model, design and develop applications based on reasoning and inference engines to be implemented in the Industry.
C9	Know the principles, techniques and systems that comprise the concept of Industrial Internet of Things (IIoT) and its relationship with design and manufacturing
C10	Knowing how to implement robust, flexible and fault-tolerant industrial control systems, through data acquisition and decision making systems appropriate to each situation.
C11	Know and use the elements and principles of operation of cyberphysical systems resulting from the integration of physical, computational and communication processes.
C12	Develop cyberphysical systems for application to product and process solutions in factories, using Systems Engineering procedures.
C13	Use the integration of different data sources for the definition of flexible, reliable and efficient supply chain management systems, supported by the Industrial Internet of Things and optimized logistics management software tools
C14	Know the concepts, principles and tools of intelligent manufacturing systems, which facilitate access to information and production data through automated tools for capturing, processing and displaying information
C15	To know and apply the additive manufacturing technologies, the materials used and the application strategies in the design and manufacture of products.
C16	Develop models, mock-ups and prototypes using additive manufacturing techniques and tools
C17	Know the advanced techniques and tools of metrology, calibration and accreditation.
C18	Develop advanced dimensional verification strategies for application to components and products in the connected industry
C19	To know, use and know how to implement principles, applications, components, instrumentation and installations of advanced robotic systems for industry.
C20	To know and know how to apply principles, techniques and equipment of immersion in virtual, augmented and hybrid reality for its implementation in the industry
C21	To know and be able to use modeling and simulation tools by finite elements, finite differences and computerized fluid dynamics (CFD) as tools of Assisted Engineering (CAE)
C22	Select the appropriate finite element difference (FEM) and computerized fluid dynamics (CFD) modeling and simulation tools to solve design and manufacturing engineering problems

Portfolio/dossier	1	21	22
Essay	1	0	1
Presentation	1	0	1
Portfolio / dossier	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Project based learning	Carrying out activities that allow the cooperation of several subjects so that the students confront, working in teams, some open problems. They will allow to train, among others, the capabilitiies for cooperative learning, leadership, organization, communication and the strengthening of personal relationships.
Mentored work	The student, individually or in groups, either elaborates a document on the subject matter, or prepares seminars, research, reports, essays, summaries of readings, conferences, etc.
Portfolio/dossier	Compilation of the student's work aiming to demonstrate his/her efforts, progress and achievements in an subject area. That collection should include content chosen by the student, selection criteria and evidence of self-reflection.

Personalized assistance

Methodologies	Description
Project based learning	Carrying out activities that allow the cooperation of several subjects so that the students confront, working in teams, some open problems. They will allow to train, among others, the capabilitiies for cooperative learning, leadership, organization, communication and the strengthening of personal relationships. For all the teaching modalities contemplated in the Contingency Plan, the tutoring sessions may be carried out by telematic means -e-mail, videoconference, FAITIC forums, etc.- under the modality of prior arrangement of virtual place, date and time.
Mentored work	The student, individually or in groups, either elaborates a document on the subject matter, or prepares seminars, research, reports, essays, summaries of readings, conferences, etc.

Assessment

Description	Qualification	Training and Learning Results

Essay	A text prepared on a subject and which must be written in accordance with established rules.	50	A2 A3 A4	B1 B2 B3 B4 B5 B6 B7	C1 C2 C3 C4 C5 C6 C7 C8 C9 C10 C11 C12 C13 C14 C15 C16 C17 C18 C19 C20 C21 C22 C23 C24 C25 C26 C27 C28 C29 C30 C31 C32 C33 C34	D1 D2 D3 D4

Other comments on the Evaluation

The students that do not pass the course in the 'continuous assessment' modality in the ordinary evaluation period will be given the chance to attend the final course exams.

Ethical commitment: Students are expected to behave ethically. If unethical behaviour is detected (copying, plagiarism, use of unauthorised electronic devices,...), the student will be considered to be ineligible to pass the subject. Depending on the type of unethical behaviour detected, it could be concluded that the student has not reached the necessary skills to overcome the subject. Students are expected to behave in a respectful and dignified manner and to collaborate with the teaching system, teaching staff, coordination and administrative and services personnel of the Master's degree. Any question due to the lack of ethical and dignified behaviour of the student body may have repercussions on the evaluation of the subject.

Recommendations

Other comments

The communication with the students will be made through the FAITIC distance learning platform, for which it will be necessary that the student accesses the course space in the platform previously to the start of the lecturing period.

Before the realisation of the evaluation tests, it is recommended that the students consult with the FAITIC platform to confirm the tests' date, place, recommendations, etc., as well as the needs regarding using manuals or any another material for carrying out the tests and elaborating the home assignment works.

Contingency plan

Description

In the face of the uncertain and unforeseeable evolution of the health alert caused by COVID-19, University of Vigo has established an exception planning that will be activated at the time the government offices and the own University mandate it. Such decision will be made based on safety, health and responsibility criteria, always guaranteeing the continuity of the teaching processes in a partial or full non-classroom scenario. Those already-planned steps will guarantee, at the moment it is required, the development of the teaching processes in a more streamlined and effective way as both the students and the lecturers will know about them beforehand (or with a broad anticipation), by means of the DOCNET standard institutional tool.

According to the instructions provided by the Vice-Rectorate for Learning Organization and Teaching Staff, the following three scenarios are required to be taken into account with their corresponding contingency level:

SCENARIO 1. Full-classroom modality.

All teaching activities will be carried out at the classroom, both for theory and laboratory classes, according to the typical way for the course in the years before 2020.

SCENARIO 2. Half-classroom modality.

In the case the half-classroom teaching modality is activated by the University government, such event will involve a reduction in the capacity of the usual teaching spaces where the full-classroom modality is developed. Because of that, as a first measure the School will provide the teaching staff of the course with the information regarding the new authorized capacities for such teaching spaces so that the teaching activities can be re-organized for the remaining time of the term. It must be pointed out that the necessary re-organization to implement will depend on the specific moment in the term in which this teaching modality is activated. The following guidelines will be followed in the re-organization or the teaching activities:

a) Communication. All students in the course will be informed through the FAITIC teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, video-call, FAITIC forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers virtual offices.

c) Classroom and non-classroom activities. From the teaching activities that remain until the end of the term, those that could be carried out by all students in class need to be identified (prioritizing laboratory activities when possible), and those other that will be carried out remotely (theory classes are the ones that usually decrease in effectiveness less in this modality), to the effects of the planning of its efficient performance.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as

initially planned and scheduled.

f) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the FAITIC portal.

With regard to the tools used for the teaching activities in the non-classroom modality, the CAMPUS REMOTO and FAITIC portals will be of preferential use, complemented if necessary with other solutions in order to address specific needs arising along the lecturing period.

SCENARIO 3. Non-classroom modality.

In the case the full non-classroom modality (discontinuation of all on-class learning and evaluation activities) is activated, the tools offered by the platforms currently available at University of Vigo -CAMPUS REMOTO and FAITIC- will be of preferent use. The specific conditions for the reo-organization to be carried out will depend of the particular time in the term in which such modality is mobilized. The following guidelines will be followed in the re-organization of the teaching activities:

a) Communication. All students in the course will be informed through the FAITIC teaching portal on the specific conditions for the development of the teaching and the evaluation activities that remain until the end of the term.

b) Adaptation and/or modification of the teaching methodologies. Even if the teaching methodologies for the course were fundamentally conceived towards the full-classroom modality, the teaching staff considers that they keep in essence their effectiveness in the non-classroom modality. That is why it is proposed to keep them as they are, even if special attention will be payed to their right development and results. Therefore, no changes will be made to the teaching methodologies initially defined for the course.

c) Adaptation of the tutorial and personalized attention to students. The tutorial sessions may be carried out by means of IT tools (email, video-call, FAITIC forums, etc.), according to the modality of prior concertation of the date and time for the session in the lecturers virtual offices.

d) Teaching contents and learning goals. There will be no changes neither in the contents to be taught nor in the learning goals, as a consequence of this teaching modality.

e) Teaching schedule. The class timetable and the calendar of the different activities in the course will be maintained as initially planned and scheduled.

f) Evaluation. No changes will be made neither to the evaluation tests, nor to their corresponding score weights, nor to their set dates.

g) Bibliography or additional materials to facilitate self-learning. The teaching staff for the course will provide the students with the necessary learning materials to attend to the specific help needs of the students with respect to the course, according to the circumstances that turn out at any particular time, through the FAITIC portal.
