General	Biology I is one of the mandatory subjects in the first s			ree in Marine
description	Sciences. The basic biological principles of cell biology	and genetics are	studied, mainly:	
	1) cell and tissue organisation.			
	2) development and cell differentiation.	2-1		
	3) transmission and characterization of herditary mate			
	4) basic aspects of evolution and the origin of species.			
	Theoretical and practical lessons are employed in the	teaching program	in order the stude	nts he familiar with
	1) microscopic identification	teaching program	in order the stade	iits be iaiiiiiai witii
	2) the solving of practical problems in genetics and ce	II hiology		
	2, the solving of practical problems in genetics and ce	ii biology.		
	English Friendly subject: International students may re	guest from the tea	chers: a) materia	ls and bibliographic
	references in English, b) tutoring sessions in English, c			

Code

- B1 Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.
- B3 Recognize and implement good practices in measurement and experimentation, and work responsibly and safely both in field surveys and in the laboratory.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- B5 Develop, implement and write basic or applied projects in oceanography from a multidisciplinary perspective.
- C9 Acquire basic knowledge about the structural and functional organization and the evolution of marine organisms.
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

Expected results from this subject

Expected results from this subject

Training and Learning Results

1. Define, look for, organize and elaborate works with information of the subject	B1	C9	D1
2. Cooperatively workout exercise resolution	B2	C11	D2
3. Use of telematic tools and other sources for autonomous learning	В3		
	B4		
CELL BIOLOGY	B5		

- 4. Recognize the diversity and organisation of cells and tissues
- 5. Establish relations between cell compartments and cell functions
- 6. Differentiate clearly vegetal and animal cell organisation
- 7. Establish relationships between cell organisation and cell function
- 8. Recognize the types of microscopes associated to the study of cells and tissues.
- 9. Morphological identification of the cells and their components.

GENETICS

- 10. Importance of DNA in biology
- 11. Apply the scientific method and basic research technologies in Genetics
- 12. Learn how to establish genetic hypotheses and strategies to refute them
- 13. Manage the basic mechanisms for the transmission of the hereditary material
- 14. Know the molecular structurer, the regulation and the expression of the hereditary material
- 15. Know the basic genomic principles and their biotechnological applications.
- 16. Know the origin of the biological diversity and the evolutionary history of the species

Contents	
Topic	
Cell biology, 1st part. General organisation of the eukaryotic cell	Cell evolution. Endosimbiosis: Evolutionary importance. Similarities and differences of animal and plant cells. Cell membranes: composition. Functional properties. Plasma membrane and cell surface. Cell junctions and cell adhession. Cell communication. Cytoplasm and cell organelles (I): Endoplasmic reticulum, Golgi and lysosomes. Vesicular traffic (II): peroxysomes, mitochondria and cloroplasts. Cytoeskeleron and cell movement. The nucleus: chromatin and chromosomes. The nucleolus.
Cell biology, 2nd part. Bases of embryonic development	Cell cycle: interphase and M phase. Apoptosis. Gametogenesis. Fertilization and development of the zyigote. Cell specialization.
Cell biology, 3rd part. Tissues	Animal tissues. Epithelium: General organisation and function. Conjunctive tissue and derivatives. General organisation. Specialized conjunctive tissues: general characteristics of cartilage, bone and blood. Muscular tissue. Nervous tissue.
Genetics	DNA estructure, organisation, replication, alterations and expression. Mendelian heredity and its variations Liinkage and recombination DNA technologies and their applications

The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Description, by the teaching staff, of the contents of the study subject, of the theoretical bases and/or the guidelines of the work, the exercise or the project to be developed by the students.
Problem solving	Resolution of genetic exercises.
Practices through ICT	Application of the learned contents to specific situations and acquisition of basic skills and procedures related with the object of study in spaces with specialized equipment (laboratories, computing rooms, etc.).

Personalized assistance				
Methodologies	Description			

Practices through ICT	The teaching staff will continuously assess the participation of the students along the course. Students who wish it may attend personal tutorials to resolve doubts and/or uncertainties, mainly at the times indicated on the faculty website and/or on the MOOVI platform. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.
Lecturing	The teaching staff will continuously assess the participation of the students along the master sessions and their on-line activities. Students who wish it may attend personal tutorials to resolve doubts and/or uncertainties, mainly at the times indicated on the faculty website and/or on the MOOVI platform. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.
Problem solving	The teaching staff will continuous assess the participation of the students in exercise solving and in the quality of solved exercises. Students who wish it may attend personal tutorials to resolve doubts and/or uncertainties, mainly at the times indicated on the faculty website and/or on the MOOVI platform. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.
Tests	Description
Problem and/or exercise solving	The teaching staff will continuous assess the quality of the solved problems, questions and exercices for each student along the semester. Students who wish it may attend personal tutorials to resolve doubts and/or uncertainties, mainly at the times indicated on the faculty website and/or on the MOOVI platform. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.

Assessment					
	Description	Qualification	I	aining Learni Resul	ng
Lecturing	Final exam: the assesment of the subject Biology I will be performed by means of a written exam. In this exam the theoretical and practical contents will be evaluated by means of test of multiple answers, questions with specific short or long answers, identification and interpretation of figures / images as well as the resolution of genetic problems Final exam. Cellr biology 19 % Genetics 19 %		B1 B2 B3 B4 B5	C9 C11	D1 D2
Objective questions exam	Final exam	2	B1 B2 B3 B4 B5	C9 C11	D1 D2
	Evaluation will be the result of the assesment of the quality of the resolution of the Genetic problems and exercises (15 %) and the marks obtained in Cell biology (30 %) and Genetics (15 %) questionaries.	f 60	B1 B2 B3 B4 B5	C9 C11	D1 D2

The final qualification includes:

- a) The mark obtained in solving problems, exercise and questionaries along the course (60 %: Cell Biology 30 %, Genetics 30 %). This mark wil be kept for the second oportunity
- b) The mark obtained in the first or second oportunity exam (40 %: Cell Biology 20 %, Genetics 20 %).

To pass the subject, a minimum of 2 points in each of the two blocks that compose the subject (Genetics and Cell Biology), and a minimum of 5 points in total, are required. It is also necessary to reach a minimum of 4 points from a total of 10 in the Genetics exam. If those minimums are not reached, the maximum numerical qualification to be reflected in the "acta" will be 4.5.

In case that the final calification do not reach the pass minimum (5 points), but are equal or higher than 2.5 in one of the two blocks (Genetics or Cell Biology), the mark will be kept for the "second edition" (July) if the student is explicity in accordance with it.

Global assessment option: The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start.

For students that chose global evaluation, marks will be the result of a single exam (100%)

Date, time and place of exams will be published in the official web of Marien Sciencies Faculty:

http://mar.uvigo.es/alumnado/examenes/

The students from previous courses will have to take part in all the programmed activities again.

Students are strongly requested tofulfil a honest and responsible behaviour. It is considered completelyunacceptable any alteration or fraud (i.e., copy or plagiarism)contributing to modify the level of knowledge and abilities acquired inexams, evaluations, reports or any kind of teacher[]s proposed work. Fraudulent behaviour may cause failing the course for a whole academicyear. An internal dossier of these activities will be built and, whenreoffending, the university rectorate will be asked to open adisciplinary record

Recommendations

Other comments

The study of the subject in a continuous way will allow the students to take part in active form in the course sylabus. It is recommended to show a real interest in the course, showing a good attitude and demonstrating aptitude in the acquisition of knowledges. The knowing, comprending, thinking and reasoning the basic notions of the subject will be indispensable to take part in the distinct activities proposed by the teaching staff and be evaluated positively.

Training	and	Learning	Results

ode)

- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B3 Recognize and implement good practices in measurement and experimentation, and work responsibly and safely both in field surveys and in the laboratory.
- C4 Know, analyze and interpret the physical properties of the ocean according to current theories, as well as to know the most relevant sampling tools and techniques.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

Expected results from this subject				
Expected results from this subject	Tr	raining R	and Le esults	arning
1. Understand the need of a reference system to describe a movement. Understand the movement	Α4	В3	C4	D1
and his causes. Identify the different types of movements. Know how graph any observation to.	Α5			D2
2. Identify the field of application of classical mechanics. Understand systems of particles and the	A4	B3	C4	D1
rigid bodies. Solve mechanical problems using Newton's laws and conservation laws.	Α5			D2
3. Understand and use in a quantitative way the concept of energy (non thermal). Recognize the	Α4	B3	C4	D1
transformations of energy to explain any daily phenomenon. Identify kinetic and potential energy	Α5			D2
in different situations. Explain and use the conservation of mechanical energy in simple situations.				
Understand work as a form of energy exchange. Solve problems related with work, power and				
conservation of mechanical energy. Evaluate the importance of energy saving.				
4. Know and understand the basic equations of the kinematics and dynamics of a simple harmonic	A4	B3	C4	D1
oscillator, damped harmonic oscillator and driven harmonic oscillator, and the phenomenon of	Α5			D2
resonance.				
5. Know the evolution of the Universe along the history. Know Newton's law of Gravitation, and	A4	В3	C4	D1
understand his application to celestial and terrestrial bodies' movements. Understand the relation	Α5			D2
between the properties of a planet and the weight of a body in his surface.				
6. Understand the Earth as a reference system, his movement around the Sun, as well as those of	A4	B3	C4	D1
the Moon. Apply that knowledge to explain phenomena like the tides, the different Moon phases,	A5			D2
the calendar's stations, etc.				
7. To know the basic characteristics of continuous bodies.	A4	В3	C4	D1
	Α5			D2

Contents	
Topic	
1. Kinematics of particles.	1.1. The position vector and the path. Celerity, velocity and acceleration (medium and instantaneous).
	1.2. Intrinsic components of acceleration (normal and tangential) and his interpretation.
	1.3. Movement of the particle in space. Analysis of different types of movements.
	1.4. Change of the reference system. Relative movement. Translation and rotation of the reference axes. Drag velocity and relative velocity. Drag
- · · · · · · · · · · · · · · · · · · ·	acceleration and relative acceleration
2. Newtonian dynamics.	2.1. Introduction: Dynamics as a part of physics.2.2. Dynamics of the particle: Dynamic's principles or Newton's laws of motion. Linear momentum. Mechanical impulse. Linear momentum conservation theorem. Angular momentum and his conservation. Central
	forces. Dynamics of the circular movement. 2.3. Dynamics of systems of particles: Types of systems; internal and external forces. Centre of mass of a system of particles. Movement of a system of particles. Newton's second law for a system of particles. Linear momentum of a system of particles. Principle of conservation of linear momentum of a system of particles and applications. Angular momentum of a system of particles. Conservation of angular momentum in a system of particles.
	2.4. Dynamics of the rigid solid: Dynamics of rotation. Momentum of inertia of rigid body. Calculation of momentums of inertia. Steiner's theorem. Kinetic momentum of rotation. Angular impulse. Conservation principle.
3. Work and energy	 3.1. The different forms of energy. Definitions of work, power and energy. 3.2. Mechanical, kinetic and potential energy. Theorem of live forces. Conservation mechanical energy. 3.3. Mechanical, kinetic and potential energy of a system of particles. 3.4. Theorem of live forces and conservation of energy for a system of
	particles. 3.5. Kinetic rotational energy.
4. Simple harmonic motion.	 4.1. The simple harmonic motion. Kinematics of the harmonic oscillator. Representation as rotating vectors. 4.2 Dynamics of the harmonic oscillator and his physical interpretation. Energy of a harmonic oscillator. 4.2. The simple pendulum. 4.3. Notion of forced oscillator. Resonance.
	4.4. Fourier analysis of the periodic movement.
5. Gravitation. Applications to the Earth.	5.1. Historical evolution.5.2. Newton's law of Gravitation.5.3. Gravitational field and potential on Earth. The local gravitational field.
6. The Earth as a reference system.	5.4. Movement of the planets and satellites6.1. The movements of the Earth in space. The stations. The phases of the
ŕ	Moon. 6.2. Dimensions and terrestrial coordinates. 6.3. The local reference system. Accelerations of inertia.
	6.4. The Coriolis acceleration.6.5. The centrifugal and terrestrial acceleration. The geopotential.6.6. Newtonian theory of tides. The tidal ellipsoid.
7. Continuous media	7.1. Introduction, qualitative ranking of the material. 7.2. Elasticity and shear deformation.
LABORATORY	 TREATMENT OF EXPERIMENTAL DATA. MEASURING INSTRUMENTS. MEASURING THE REACTION TIME.
	 STATIC STUDY OF A SPRING. HOOKE'S LAW. OSCILLATORY MOVEMENTS IN A SPRING. SIMPLE HARMONIC MOTION. STUDY OF THE SIMPLE PENDULUM.

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Laboratory practical	Realization of different laboratory experiments with which the students will get basic knowledge in the experimental procedure in physics, as well as in the calculation of the error of a measurement. The attendance to the laboratory and the delivery in time and form of the corresponding report is a must for this subject in the year in course, both in the global assessment option and in the continuous assessment option.
Lecturing	Exhibition and explanation of the diverse physical concepts and his motivation, of the distinct laws with which relate, as well as the demostration of the required theorems. Resolution of some practical examples to support the theoretical explanations.
Seminars	Resolution of different problems related with the theory, doubts and concepts of difficult understanding. Exercises that the student must solve autonomously will be proposed. The attendance at the seminars and the delivery of the proposed exercises is mandatory to pass the subject in the continuous assessment option.

Personalized assis	Personalized assistance			
Methodologies	Description			
Seminars	The teacher will solve any doubts that are presented to the students in solving the problems. Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated (Mondays and Tuesdays from 11:00 a.m. to 2:00 p.m.). To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.			
Lecturing	The teacher will solve any doubts that are presented to the students in the lecturing. Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated (Mondays and Tuesdays from 11:00 a.m. to 2:00 p.m.). To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.			
Laboratory practical	The teacher will solve any doubts that are presented to the students in the laboratory about the material used, what is used and how is used correctly, the experimental procedure used, the analysis of results, the necessary computer tools, Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated (Mondays and Tuesdays from 11:00 a.m. to 2:00 p.m.). To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.

Other comments on the Evaluation

GLOBAL ASSESSMENT OPTION:

Students who choose the GLOBAL assessment should request it within the period and in the manner stipulated by the Center. This information will be available to all students before the start of the teaching period. To pass the subject, they must complete and pass the Laboratory Practices evaluation (30% of the final mark) with a score equal to or greater than 5 points over 10. In addition, they must achieve at least 5 points out of 10, in a test on all the contents of the subject, which will account for 70% of the final mark, both in the ordinary and in the extraordinary opportunity.

Laboratory: Attendance at laboratory classes is mandatory, therefore in the case of unjustified absences, you will not be entitled to recover this methodology, neither in the global evaluation modality nor in the extraordinary opportunity (July call).

Seminars: In the case of GLOBAL assessment, the 30% corresponding to this methodology will be included in the final test. **Extraordinary oportunity (2nd Opportunity)**: In the case of continuous assessment, in the official test, only the recovery of the problems exam of the ordinary call can be made (40%). Students who have NOT exceeded 5 points over 10 of the seminars mark and the laboratory practice report, will be able to improve it in the extraordinary opportunity (July call).

Other considerations:

Date, time and place of the official exams will be published in the official web of Marien Sciencies Faculty: http://mar.uvigo.es/alumnado/examenes/

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- B1 Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- C12 Acquire knowledge about processes and products related to internal and external geological cycles.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

Methodologies	
	Description
Introductory activities	The student will be presented with the way in which the classes will be taught, the form of evaluation, the field trips, the practical classes and the seminars. The agenda will be distributed, as well as the necessary material for practical classes and seminars.
Lecturing	The student will be exposed to the theoretical contents that will be evaluated in a final exam.
Seminars	The stereographic projection will be used to represent data of geological structures. Practical work on types of deformations. Identification of large tectonic structures through geographic representation systems. Introduction to the field trip and use of a geological compass.
Laboratory practical	You will learn to deal with topographic and geological maps, to order rocks and geological processes in time from geological sections. In addition, the student will learn to recognize the most common minerals and types of igneous and metamorphic rocks in nature.
Studies excursion	The student will learn to handle the geological compass, recognize rocks and geological structures in the field, their implications for internal processes, and their applied consequences.

Personalized assistar	nce
Methodologies	Description
Lecturing	The student may be assisted both during master sessions, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Introductory activities	The student may be assisted during the introductory activities, if it does not significantly affect their development, such as during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Seminars	The student may be assisted both during the seminars, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Laboratory practical	The student may be assisted both during practices, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.

Studies excursion	The student may be assisted both during field practices, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Tests	Description
Problem and/or exercise solving	The student may be assisted both during the seminars, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Laboratory practice	The student may be assisted both during practices, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Report of practices, practicum and external practices	The student may be assisted both during field practices, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.
Objective questions exam	The student may be assisted both during master sessions, if it does not significantly affect their development, and during tutorial hours (Monday, Tuesday and Wednesday from 12:00 to 14:00). To optimize time, it is necessary for students to contact the teacher sufficiently in advance.

The course evaluation system will be continuous evaluation, in which the following items will be valued: class attendance (5%); seminars (15%); laboratory practices (30%); leaving studies (10%); exam (40%).

Given the experimental nature of the subject, it is considered that attendance at at least 80% of the practices, seminars and study trips is mandatory to acquire the learning results of the subject, whatever the opportunity (ordinary and extraordinary) and/or the system of study. assessment (continuous or global). Therefore, if said assistance is not met, the subject cannot be passed.

In order to average the exam grade, the minimum grade in Problem Solving and/or Exercises; Laboratory practices; and Internship Report, Practicum and External Practices must be 5/10. In the same way, to be able to add the rest of the tests, in the exam you have to have at least a 3.5/10.

Students who have not passed the subject in the 22/23 academic year will not be obliged to repeat, during the 23/24 academic year, the laboratory practices, seminars and study trips, keeping the grade.

The application for the Global Assesment option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start.

For communications with teachers, the use of the "messaging" of the MooVi platform is recommended, in addition to the use

of the institutional email account (@alumnos.uvigo.es)

The students of the University Program for the Elderly of the University of Vigo who choose this subject within the Integration cycle in order to pass it will have to attend at least 80% of the master sessions as well as at least 80% of the rest of the methodologies employed (seminars, laboratory practices and field practices). On the other hand, the degree of integration with the students of the degree will be valued.

During classes, the use of mobile phones will not be allowed except for activities exclusively related to the subject.

Other considerations

The date, time and place of the evaluation tests will be published on the official website of the Faculty of Marine Sciences:

http://mar.uvigo.es/alumnado/examenes/

Students who take this subject are required to behave responsibly and honestly. Any form of fraud (copying or plagiarism) aimed at distorting the level of knowledge and skills achieved in any type of test, report or work will be considered inadmissible. Fraudulent conduct may mean failing the subject for a full course. An internal record of these actions will be kept so that, in case of recidivism, request the opening of a disciplinary file to the rector.

	exams and assessments in English.		, ~,	

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C1 know at a general level the fundamental principles of sciences: Mathematics, Physics, Chemistry, Biology and Geology.
- C2 Acquire basic knowledge of mathematics (differential and integral calculation) and statistics.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.
- D3 Understanding the meaning and application of the gender perspective in different fields of knowledge and in professional practice with the aim of achieving a more just and equal society.
- D4 Ability to communicate orally and in writing in Galician language.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

Expected results from this subject

Contents	
Topic	
Matrix calculus	Operations with vectors in the plane and in space. The vector space Rn. Matrices and determinants. Basic operations with matrices and determinants. Discussion and resolution of systems of linear equations.
Differential calculus	Introduction to the functions of several variables. Differentiable functions. Chain rule. Implicit derivation. Extremes and conditional extremes of scalar functions.
Integral calculus.	Riemann integral. The fundamental theorem of integral calculus. Application to the calculation of areas.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	26	52	78
Problem solving	16	32	48
Practices through ICT	4	8	12
Essay questions exam	6	6	12

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Exposure of the theoretical bases and orientation, by the teaching staff, on the contents of the subject.
Problem solving	Activities focused on work on a specific topic, which allow deepening or expanding the contents of the discipline. They will be used as a complement to the theoretical classes.
Practices through ICT	Use of a scientific calculator to help solve the exercises proposed in the seminars and master sessions. They take place in computer classrooms.

Personalized assistance		
Methodologies	Description	
Problem solving	Students who wish may attend personal tutorials to resolve doubts, mainly at the times indicated on the faculty website and/or on the MOOVI platform. In order to better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable notice.	
Practices through ICT	Students will demand from the teachers the clarifications they deem appropriate to better understand the subject and successfully carry out the proposed tasks. The individual work of the student will also be monitored.	

Assessment					
	Description	Qualification	Tra	ining	and
			Learn	ing F	Results
Problem solving	Test that will consist of theoretical questions and exercises that the student	60	A1	C1	D1
	will answer by organizing and presenting, in an extensive way, the		A2	C2	D2
	knowledge they have on the subject.		А3		D3
	There will be three tests, each counting 20 percent of the grade.		Α4		D4
			A5		D5
Practices through ICT	Test in which students must solve some exercises using the computer program used in the classroom.	5	A5		D1
Essay questions	It will be carried out as part of a final test that will take place at the end of	35	A1	C1	D1
exam	the course, and will have a value of 35 percent of the final grade.		A2	C2	D2
			Α3		D3
			Α4		D4
			A5		D5

Students who do not wish to follow the subjet regularly may choose the global assessment option. The request for this option must be submitted at the time and in the manner determined by the Center, which will be published prior to the academic start. In the case of opting for the global evaluation, all the matter will be evaluated in a single test that will correspond to 100% of the final grade.

For the second opportunity, the students who follow the continuous evaluation will maintain the qualification obtained in it. For the remaining students, the test will correspond to 100% of the final grade.

2nd Opportunity: Students who follow the continuous assessment will mantein the grade obtained in it. For the remaining students the test will correspond to 100% of the final grade.

The date, time and place of the evaluation tests will be published on the official website of the Faculty of Marine Sciences: http://mar.uvigo.es/alumnado/examenes/

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	They will consist of the exposition of the fundamental aspects of each topic by the teacher, based on the material available on the e-learning platform. In addition to the exposition of topics, numerical problems will also be formulated to help to understand and establish the concepts.

Seminars	The seminar classes will be devoted primarily to problem solving and, when necessary, to delve into the aspects of the topics that present greater difficulties to the students. In the seminar sessions, the teacher may propose problems or exercises that the students must solve individually and submit to the teacher for evaluation.
	Attendance will be positively valued.
Laboratory practical	Performance, under the supervision of the teacher but autonomously, of laboratory practices related to the subject. The practices will be carried out in pairs. Before starting, the students will have, in the corresponding platform, the scripts of the practices. The script will present the essential elements to carry out the practice at experimental level, as well as the basic points of its theoretical basis and data processing. At the end of the practicals, an evaluation will be carried out by means of a written test, delivery of a report and/or oral test according to the teacher's criteria. Attendance to the practical sessions IS

Personalized assis	stance
Methodologies	Description
Lecturing	Those doubts/questions of the students that may arise along the course concerning the classes of theory will be solved in the tutoring schedule. The preferential modality for the tutoring will be a mixed model decided by the student and teacher. The student will have to request an appointment with the professor to arrange the date, hour, and method (virtually or on-site).
Laboratory practica	I Those doubts/questions of the students that may arise along the course concerning the laboratory practices or the preparation of the corresponding reports will be solved in the tutoring schedule. The preferential modality for the tutoring will be a mixed model decided by the student and teacher. The student will have to request an appointment with the professor to arrange the date, hour, and method (virtually or on-site).

	Description	Qualification	ı T	raining	and
		•		rning R	
Seminars	For each subject or block of subjects, the estudiantado, of individual form,	15	A1		D1 D2
	will resolve a problem or exercise, to proposal of the *profesorado, that will deliver to be evaluated.		A5	Co	DΖ
	It will value the assistance.		_		
Laboratory	It marks here together with the effort and the attitude, the skills and the	15	Α1	B3 C1	
practical	competitions developed by the student during the realisation of the distinct practical.		A5	B4 C6	D2
	The assistance the sessions of practices is compulsory and, therefore, is not				
	possible to approve the matter in the case of not to have made.				
	- It remains to criterion of the educational make an evaluation by means of				
	an oral proof and/or written the last day of practices.		_		
Essay questions	First test. The date of the test will be agreed with the students, as far as	15	A1	~-	D1
exam	possible, but always after the completion of topic 2. The evaluation will be based on theory questions and the resolution of exercises.		A5 -	C6	D2
Objective	Self-assessment tests that students must solve individually, through the	15	A1	~-	D1
questions exam	MOOVI platform.		A5	C6	D2
Essay questions	Second test to be taken on the date of the official exam. The contents	40	Α1		D1
exam	evaluated will be all the contents of the subject. The evaluation will be based on theory questions and the resolution of exercises.		A5 -	C6	D2

In order to pass the subject, it is essential to attend the practical sessions and to achieve a minimum grade of 5.0 points out of 10 in the second test. If this score is not reached, the grade that will be reflected in the minutes will be only the grade of this exam, not counting any of the other sections.

The overall grade will be the weighted sum of the tests (55%), the laboratory practices (15%), the self-evaluation tests (15%) and the Seminars (15%). The computation of the evaluable methodologies: laboratory practices (15%), self-evaluation test (15%) and Seminar (15%) will be effective as long as a minimum score of 3.5 points is obtained in each of them. The completion of any evaluable test will imply the condition of "presented" and, therefore, the assignment of a grade according to what is stated in this teaching guide.

Second Round:

For the evaluation in the second call, the percentages of the laboratory practices, tests and Seminar will be maintained. The exam in this call will be weighted 55%. In order to pass the subject in this call, it will be necessary to obtain a minimum qualification of 5.0 points out of 10 in the exam, in which all the contents of the subject will be evaluated.

Global assessment option

The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start. Given the experimental nature of the practices, attendance at them is mandatory to be eligible for this evaluation option. Failure to attend the practices, with no justified cause invalidates this possibility, as well as the opportunity for extraordinary evaluation (2nd opportunity). To pass the subject, they must complete and pass the Laboratory Classes evaluation (15% of the final mark) with a score equal to or greater than 4.0 points over 10. In addition, they must achieve at least 5.0 points out of 10, in a test on all the contents of the subject, which will account for 85% of the final mark, both in the ordinary and in the extraordinary opportunity.

Other considerations:

It considers inadmissible any form of fraud (i.e. copies and/or plagiarism) directed to *falsear the level of knowledge or skill reached in any type of proof, report or work. The fraudulent behaviours will be able to suppose suspend the matter during a complete course. It will carry an internal register of these performances for, in case of *reincidencia, request to the rectorship the opening of a disciplinary file.

General description	It is the first approach of the student to the Zoology ar	nd Ecology.		
	English Friendly subject: International students may re a) resources and bibliographic references in English, be exams and assessments in English.			

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- C9 Acquire basic knowledge about the structural and functional organization and the evolution of marine organisms.
- C10 Know the biological diversity and functioning of marine ecosystems.
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

Expected results from this subject			
Expected results from this subject	Tra	aining and Resu	
1. Know, comprise, measure and value the importance of the biodiversity of the organisms in the half marine.	A1	C9 C10 C11	D1 D2
2. Comprise the bases of the diversity and the evolutionary history of the animal species.	A1	C9 C10 C11	D1 D2
3. Know the basic terminology of the zoological science.	A1	C9 C10 C11	D1 D2
5. Know the situation of the *filos zoological in the marine ecosystems (*zooplancton, *necton, *bentos).	A1	C9 C10 C11	D1 D2
6. Know the adaptations *morfolóxicas that condition the situation of the zoological groups in the marine ecosystems coastlines, *neríticos and deep.	A1	C9 C10 C11	D1 D2
7. Know recognize the main *filos zoological belonging to the half marine.	A1	C9 C10 C11	D1 D2
8. Know recognize the offshore species more common.	A1	C9 C10 C11	D1 D2
9. Know and comprise the basic ecological principles that determine the structure and the operation of the marine ecosystems.	A1	C9 C10 C11	D1 D2
10. Acquire basic knowledge on autoecoloxía. Adjustment go in the organisms and the environment. Environmental factors. Analysis of the effects and answers of the organisms the distinct Factors. Conditions and resources.	A1	C9 C10 C11	D1 D2

11. Purchase the capacity to relate processes *ab	pióticos and *bióticos in the half marine.	A1	C9 C10 C11	D1 D2
12. Purchase skill in the analysis and interpretation	on of data.	A1	C9 C10 C11	D1 D2
13. Purchase the skill to transmit information of f	orm written, verbal and graphic.	A1	C9 C10 C11	D1 D2

Methodologies	
	Description
Lecturing	Explain to the students the theoretical contents that will be evaluated in a final examination.
Seminars	By means of the preparation of oral exhibitions on scientific texts selected, the students will show his skills, the team work, oral exhibition regard a scientific subject. After the exposure we will open a debate to evaluate the capacity of synthesis and the understanding of the subject proposed.
Laboratory practical	Recognize the answers of the organisms to the environmental factors. Besides to recognize the most commons marine organisms on our coasts.
Studies excursion	The students will learn to recognize the marine organisms more common of the European coasts.

Description
Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.
It Will do a continuous assessment of the academic performance of the student during the Seminars by means of the observation of the his active participation, so much during the phase of preparation, manufacture, exhibition, back debate as well as the resources to bibliography used.
The professors of the subject will realize a continuous assessment of the performance of the student, in base to the participation in the practices and to the intervention in the distinct activities offered.
Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.
Description
The professor will be present at the exam.
The professor will be present at the exam.
The professor will be present at the exposition.
The professor will be present at the laboratory.

Presentation	Attendance is mandatory during the seminar to give the presentation. It will qualify the presentation and discussion.	15	_A1	C9 C10 C11	D1 D2
Laboratory practice	Attendace is mandatory to prepare the results book. It will qualify the laboratory results book.	25	A1	C9 C10 C11	D1 D2

Continuous assesment: Master class/Lecturer attendance: 0.2 points. Exam: 3.8 points. Seminars and technical visit: 3 points. Practices: 3 points.

Global assessment: The application for this evaluation must be submitted in the time and manner determined by the Center, which will be published prior to theacademic start. Given the experimental nature of the practices, attendance at them is mandatory to be eligible for this evaluation option. Failure to attend the practices, with no justified cause invalidates this possibility, as well as the opportunity for extraordinary evaluation (2nd opportunity).

2nd Opportunity (July call)

Students will be able to recover up to a maximun of 4 points in the 2nd chance exam.

Date, time and place of exams will be published in the official web of Marine SciencesFaculty:

http://mar.uvigo.es/alumnado/examenes/

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

	English Friendly subject: International students may re a) resources and bibliographic references in English, be exams and assessments in English.)

- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B2 Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- C2 Acquire basic knowledge of mathematics (differential and integral calculation) and statistics.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

method.				D2
Introduce the students in the manage of computer packages related to statistics: R and RStudio.	A3	B2		D1
And so favor a positive attitude towards the quantitative methods, in general, and statistics, in	A5	B4		D2
particular, as well as their computer manipulation.				
Understand the importance of statistical analysis when taking decisions and learn when to apply	A3	B2		D1
each technique and interpret the results obtained.	A4			D2
To awaken the taste for the use and study of statistics, seeing it as a tool that allows us to learn	A3			D1
more about our own field of knowledge and to start carrying out our own research.	A5			D2

Contents	
Topic	
1. Introduction to statistics. Basic concepts.	Population. Individual. Sample. Random variable. Types of variables: qualitative and quantitative. Descriptive and inferential statistics.

2. Descriptive statistics and exploratory data analysis.	 One-dimensional case: frequency distribution. Measures of location (mean, median, mode and quantiles), dispersion (range, interquartile range, standard deviation and variance) and shape (skewness). Two-dimensional case: double-entry frequency tables. Correlation. Measures of centralization and dispersion by subgroups. One-dimensional and two-dimensional graphical representations.
3. Introduction to probability theory, random variables and main probability distributions.	Basic concepts: sample space, events and elementary events, basic rules of probability, main probability theorems, conditional probability and independence, probability distribution. Probability mass function. Distribution and density function. Main discrete probability distributions: binomial, multinomial, Poisson. Main continuous probability distributions: normal, exponential.
4. Introduction to statistical inference.	Point estimation: properties of estimators. Confidence intervals: construction. Hypothesis testing: main concepts. Types of error. Critical level or p-value.
5. Comparison of means	Comparison of two means: dependent and independent samples. Non-parametric tests. Comparison of more than two means: analysis of variance (ANOVA) of one factor. Non-parametric tests.
6. Regression and correlation	Simple linear regression model. The regression line. Goodness of fit and residual analysis. Hypothesis tests for the simple linear regression model Non-linear regression: logarithmic and exponential models.
7. Qualitative data analysis	Contingency tables. Measures of association. Chi-square goodness-of-fit test and Chi-square test of independence.

	Description	Qualification	n T	raining	and
			Lea	rning F	Results
Practices	Throughout the course, students will carry out four practical case studies of	30	A2	B2	D1
through ICT	data analysis using R software. Each case study will account for 7.5% of the		А3	B4	D2
	final grade. The evaluation will be carried out by means of a test through the		Α4		
	Moovi platform and the delivery of the code (script) necessary for its		Α5		
	resolution.				
Objective	Tests throughout the course. Two mid-term exams (multiple-choice test). Each	30	_ A2	C2	2 D1
questions exan	n exam will account for 15% of the final grade.		Α3		
·	-		Α4		
			Α5		
Essay question	s Final exam on the contents of the course. The exam will consist of solving	40	_ A2	C2	D1
exam	problems and exercises. A qualification higher than 3.5 points (out of 10) must		Α3		
	be obtained in order to pass the course.		Α4		

Other comments on the Evaluation

Continuous evaluation: The student's work throughout the course will be evaluated. In the final qualification, the evaluations/tests carried out throughout the course (practicals and mid-term tests) will represent 60% and the final exam (to be made on the official date) 40%. To pass the subject, it will be compulsory to attend the final exam and to obtain a qualification higher than 3.5 points (out of 10). In case of not obtaining in the final test the minimum qualification to pass the subject, the grade to appear in the official record will be the minimum between 4.9 and the final qualification (weighted).

Second opportunity: In the second opportunity the same scale will be applied as in the continuous evaluation, with the evaluations/tests carried out throughout the course accounting for 60% and the final exam for 40%. In this case, the qualifications of the evaluations/tests carried out throughout the course will be maintained and only the final exam will be repeated, in which a qualification higher than 3.5 points (out of 10) must be obtained in order to pass the subject. In case of not obtaining in the final test the minimum qualification to pass the subject, the grade to appear in the official record will be the minimum between 4.9 and the final qualification (weighted).

Global evaluation: As an alternative to the continuous evaluation system, students may choose to be evaluated with a final exam that will represent 100% of the qualification. In this case, it will be necessary to obtain a qualification higher than 5 points (out of 10) in order to pass the subject. The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published before the academic start.

The date, time and place of the final exams will be published on the official website of the Faculty of Marine Sciences.

http://mar.uvigo.es/alumnado/examenes/

Students are strongly requested to fulfill a honest and responsible behavior. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behavior may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

	Description
Laboratory practical	Given the experimental nature of the practicals, attendance is mandatory.
	Practical 1: Drawing geological sections.
	Practical 2:Analysis of maps and geological sections. Calculations dip and strike and thicknesses of layers. Unconformities
	Practical 3: Space representation in geology: contour maps of marine sediment thickness.
	Practical 4: Identification of sedimentary rocks. Calculation of the CaCO3 content of marine

Seminars	Given the experimental nature of the seminars, attendance is mandatory.
	Seminar 1: Clocks in rocks.
	Seminar 2: ¿What does the Earth do with the CO2?.
	Seminar 3: Processes of meteorización in rocks.
Studies excursion	Geological evaluation of the itinerary Ramallosa-Baiona to examine the control that exerts the geology, the marine and fluvial dynamics in coastal geomorphology. Identification of human impact on the coast.
Lecturing	Lectures are focused on theoretical contents external geology. Students are encouraged to participate and raise question. Participation will be a plus in the final evaluation of the student

Personalized assistance	
Methodologies	Description
Seminars	The students are encouraged to formulate questions during the development of the seminars. For supplementary tuition, students are required to email the lecturer in advance.
Studies excursion	The students will receive tuition during the development of the studies excursion.
Lecturing	The students are encouraged to formulate questions during the development of the lectures. For supplementary tuition, students are required to email the lecturer in advance.
Laboratory practical	The students are encouraged to formulate questions during the development of the practicas. For supplementary tuition, students are required to email the lecturer in advance.
Tests	Description
Report of practices, practicum and external practices	For supplementary tuition regarding the report of practices, students are required to email the lecturer in advance.
Essay questions exam	For supplementary tuition regarding the essay questions exam, students are required to email the lecturer in advance.
Problem and/or exercise solving	Questions raised by students will be solved during lectures.
Report of practices, practicum and external practices	For supplementary tuition regarding the report of seminars, students are required to email the lecturer in advance.
Report of practices, practicum and external practices	Students will be able to formulate specific questions regarding the report of the excursion during the excursion itself

Assessment					
	Description	Qualification		ining a ing Re	
Laboratory practical	Given its experimental character, the assistance to the practical is compulsory.	0	B1 B4	~-	D1
Seminars	Given its experimental character, the assistance to the seminars is compulsory.	0 /	A1 B1	C1	D5
Studies excursion	Given its experimental character, the assistance to the the excursion is compulsory.		A1 B1 A5 B4		D5
Report of practices, practicum and external practices	It requires handing in a report or problem solving exercices in each one of the 4 practicals.	n 30 /	A1 B4	C1 C12	D1
	It will be evaluated the contents, and the quality of the reports, etc, of each one of the 4 practicals programmed for the subject.				
	Given the compulsory and face-to-face character, reports of non- attendees will not be taken into account.				
Essay questions exam	The exam will contain specific questions about the contents developed during lectures.		A1 B1 A5	C1 C12	
Problem and/or exercise solving	This is a short (10-15 minutes) questionaraire about any theoretical contents explained previously during lectures. It will take place three times during lectures. The dates are indicated in timeline.	10	B1 B4		

Report of practices, practicum and external practices	It requires handing in a report or problem solving exercices in each one of the 3 seminars.	20	A1		C1 C12	
•	It will be evaluated the contents, and the quality of the reports, etc, of each one of the 3 seminars programmed for the subject.					
	Given the compulsory and face-to-face character, reports of non- attendees will not be taken into account.					
Report of practices, practicum and external practices	It requires handing in a report or questionnaire about the studies excursion.	10		B1 B4	C12	D5
	Given the compulsory and face-to-face character, reports of non- attendees will not be taken into account.		_			

FIRST OPPORTUNITY ASSESSMENT:

The students that have not attended all sesions of practicals, seminars and the studies excursion (except for justified reasons, see regulation*) will not be evaluated, either by continuous or global options.

The final score will be the sum of the mark obtained in each one of the tests as long as they are marked 4 over 10 in seminars, practicals and the essay questions exam. In case they do not reach 4/10 in any of these three test, the final score will be multiplied by 0.5.

SECOND OPPORTUNITY ASSESSMENT:

In the case failing the first opportunity, the assessment in the second opportunity will be a theorical-practical test accounting for 100% of the final mark.

<u>GLOBAL ASSEMMENT OPTION:</u> The application for thisevaluation option must be submitted in the time and manner determined by theCenter, which will be published prior to the academic start. However, it can only be requested if attendance at all mandatory activities is fulfilled (practicals, seminars and the studies excursion) unless adequate justificaction is provided. The global assessment will be a theorical-practical test accounting for 100% of the final mark.

GENERAL CONSIDERATIONS

It is expected the students to behave respectfully and honestly.

It inadmissible any form of fraud (copy and/or plagiarism) to fake the level of knowledge or skills reached by the student in any type of proof, report or work. The fraudulent behaviours entail failing the subject during the whole year.

The use of mobile phones for purposes other than educational, is not allowed during the duration of classroom activities.

Communication by e-mail between students and lecturers must be done using only the institutional e-mail (@alumnos.uvigo.gal). Likewise, this e-mail is the one that must appear in moovi. *See REGULATIONS

*See Regulation: REGULAMENTO SOBRE A AVALIACIÓN, A CALIFICACIÓN E A CALIDADE DA DOCENCIA E DO PROCESO DE APRENDIZAXE DO ESTUDANTADO (Aprobado no claustro do 18 de abril de 2023)

The date, hour and place of the evaluable activities will be published in the official web of the Faculty of Marine Sciences: http://mar.uvigo.es/index.php/es/alumnado/examenes/

description	English Friendly subject: International students may re	quest from the tea	chers:	
	a) resources and bibliographic references in English, b in English.) tutoring sessions	in English, c) exa	ams and assessments

- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- know at a general level the fundamental principles of sciences: Mathematics, Physics, Chemistry, Biology and Geology.
- Acquire basic knowledge of mathematics (differential and integral calculation) and statistics.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

Expected results from this subject					
Expected results from this subject		Training and Learnin			
		Resu	ılts		
Understand the concepts of curl and divergence of a vector field. Understand the importance of	A5	C1	D2		
line and surface integrals and how to use them in the study of the potential energy and other					
physical questions.					
☐ Formulate and solve first and second order differential equations.	A5	C1	D2		
Use a computer program to solve problems related to integral calculus and differential equations		C1	D2		
		C2			

Contents	
Topic	
Line integrals. Conservative fields.	Regular curves. Integral along a curve. Work done by a field. Conservative fields. Curl. Divergence.
Double integration. Surfaces.	Integration in rectangles. Integration in general areas. Change of variable. Polar coordinates. Green's Theorem. Parametric and regular surfaces. Orientation of a surface.
Surface integrals. Triple integration.	Flow rate. Stoke's theorem. Triple integrals. Spherical and cylindrical coordinates. Gauss' Theorem.
First order differential equations.	Solution of a differential equation. Separable equations. Exact equations. Linear equations.
Higher order linear differential equations.	N-order linear equations. Solutions.Second-Order Equations with Constant Coefficients. General solution to a homogeneous equation. Particular solution to a complete equation.
Laboratory topics	Integration and differential equations problem solving using computer software.

Methodologies	
	Description
Lecturing	Explanation of the theoretical basis and resolution of exercises and basic examples.
Seminars	Activities focused to individual work or in group to solve problems in order to expand and deepen
	the contents. They are used as a complement to the theoretical lectures.
Practices through ICT	Learning a computer program for calculation and graphic representation.
Autonomous problem	Students must solve problems using the methodology and information available and be able to
solving	interpret the results.
Collaborative Learning	Specific teamwork activities

Methodologies	Description
Seminars	Students will ask the professor about clarifications for a better understanding of the subject and successfully carry out the proposed tasks.
Practices through ICT	Students will ask the professor about clarifications for a better understanding of the subject and successfully carry out the proposed tasks.
Collaborative Learning	Students may attend office hours to ask for extra help or seek clarification of the material presented in class. It is necessary to contact the teacher in advance by e-mail to schedule an appointment.

Problem and/or	Oral presentation or written assignment in which the student must solve	15	45	C1	D2
exercise solving	a series of problems under the conditions and time set by the teacher.			C2	

Other comments on the Evaluation

The date, time and location of the final test will be published on the official website of the Faculty of Marine Sciences: http://mar.uvigo.es/alumnado/examenes/

The assessment system will select the best grade between the following:

- a) the one obtained from the five previous items with their respective weights.
- b) the one obtained in the final exam with a weight of 100%.

For this reason, the students of this subject will not have to choose between continuous or global assessment since the system selects the most convenient for them.

Students who do not pass the subject in the ordinary call, and intend to do so in the extraordinary call, will maintain the grades obtained during the course.

The students of the extraordinary "fin de carrera" call will be evaluated with an exam that will count 100% of the grade. Students are required to take this course responsible and honest behavior. Any form of fraud (copying or plagiarism) aimed at falsifying the level of knowledge and skills achieved in all types of evidence, reports or work is considered inadmissible. Fraudulent conduct may mean failing the subject for a full course.

General	The subject "Chemistry II" corresponds to first year of Che	emistry in the de	gree of Marine So	ciences at the
description	University of Vigo. It aims to introduce students to the the	ermodynamic vis	ion of Chemistry.	For this, a review of
	principles will be carried out with the rigorous definition a			
	Gibbs and Helmholtz, in addition to the chemical potentia			
	and apply them to the study of phases and chemical proc	esses. We will a	so consider how	Thermodynamics
	approaches the study of ideal and real solutions and colli	gative properties	i.	
	The teaching is divided into three parts. The first will pres			
	examples or theoretical applications of it. The second will			
	stimulating the participation/performance on the part of t			
	laboratory practices, where real applications (experiment			
	parts will be dealt with and that will help the students ass	similate the dyna	mics of work in a	Chemistry
	laboratory.			
	Subject of the English Friendly program: International stu			
	bibliographical references to follow the subject in English	, b) attend tutori	ais in English, c) t	tests and
	assessments in English.			

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- C6 Acquire the fundamentals and terminology of chemical processes.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

Expected results from this subject			
Expected results from this subject	Training	and Le	earning
		Results	
Knowledge and employment of basic concepts of thermodynamics. Knowledge of the processes of	A1 B4	C6	D1
transfer of heat and the processes of mixture in marine means.			D2
Knowledge and understanding of the phase equilibrium and the phase changes.	B4		D1
			D2
Knowledge of the model of ideal solutions and colligative properties. Apply the colligative	A5 B4	C6	D2
properties to the water of the sea.			
Knowledge of the properties of the real and electrolyte solutions. Knowledge and application of the	A5 B4	C6	D1
concept of activity. Knowledge of the description of the sea water as an aqueous electrolyte			D2
solution and analysis of related properties.			
Application of the concept of chemical equilibrium to real and electrolyte solutions. Knowledge of	A5 B4	C6	D1
the influence of the characteristics of sea water in chemical reactions in that medium.			D2

1. Principles of thermodynamics	The internal energy and the first principle. Enthalpy. Heat capacities. Ideal gases and first principle. Entropy and second principle. Calculation of entropy differences. Entropy, reversibility and irreversibility.
2. Thermodynamic functions	Gibbs and Helmholtz functions. Gibbs equations. Calculation of changes in state functions. Partial molar magnitudes. Chemical potential.
3. Phase equilibrium in one-component system	Phase equilibrium conditions. The phase rule. Phase diagram of water. The equations of Clapeyron and Clausius-Clapeyron.
4. Thermodynamics of ideal solutions	Chemical potential of an ideal gas. Ideal solutions. Vapor pressure. Ideal diluted solutions. Colligative properties: their influence on sea water. Osmotic pressure.
5. Thermodynamics of real solutions and electrolyte solutions	Deviations from Raoult's Law. Activity and activity coefficient. Determination of activities and activity coefficients. Chemical potential in electrolyte solutions and their activity coefficient. Debye-Hückel's theory. Thermodynamics of solvation of ions. Sea water as an electrolyte solution. Quantitative treatment of polyelectrolyte solutions.
Thermodynamics of chemical equilibrium	Chemical equilibrium and degree of progress of a reaction. Variation of the equilibrium constant with temperature. Chemical equilibrium in real solutions. Chemical equilibrium in electrolyte solutions. Effect of ionic strength on equilibrium.
Laboratory practices	Practices related to the following topics will be carried out: Enthalpy of dissolution. Method of solubility: enthalpy. Hot. Heat capacity. Effect of ionic strength on solubility. Chemical balance. Solubility product. Balance constant. Activity. Coefficient of activity. Ionic strength and its effect on the equilibrium constant. Dissolution and neutralization heat. Calorimetric method. Enthalpy, heat, heat of reaction, thermal capacity. Integral and differential heat. Ebulloscopic increase. Raoult's Law. Chemical potential. Enthalpy of vaporization. Study of the liquid-vapor equilibrium of mixtures of two liquids. Rule of the phases. Liquid-vapor balance. Phase diagram. Raoult's Law. Chemical potential. Coefficient of activity

Assessment				
	Description	Qualification		ng and g Results
Laboratory practical	In this section could be valued: - The work carried out by the students in the laboratory. - The report on the laboratory experiments carried out by the students. - Test about the work developed. Attendance at laboratory experiments is required. To overcome the subject the student should reach at least 50% of the	15	В4	D2
Essay questions exam	maximum possible score for this activity. Written exam in which the level of theoretical knowledge and problem solving skills will be checked. It will be made in the middle of the semester.		A1 B4 A5	C6 D1 D2
Essay questions exam	See "Other comments on the evaluation" Written exam in which the level of theoretical knowledge and problem solving skills will be checked. It will be made in the date determined by the Faculty.		A1 B4 A5	C6 D1 D2
Problem and/or exercise solving	See "Other comments on the evaluation" The resolution of problems and questions proposed in the classroom and/or on the Moovi platform will be valued	25	A1	C6 D1 D2

The participation of students in any of the assessment activities of the subject will involve the assignment of a grade. Regarding this point, attendance at the laboratory sessions (two or more), realization of 20% of the exercises proposed by the professor and the realization of written tests will be considered.

The final grade of the subject will be the weighted addition of the marks for all the sections, provided that the minimum score required in each of them is reached.

The students who only carry out the laboratory practices will receive the qualification resulting from the application of the percentage corresponding to this section. The qualification corresponding to the written tests will be the average of the grade obtained in both and, to pass the subject, a score equal to or greater than 4 points out of 10 must be achieved. In case of obtaining a grade of less than 4 points out of 10, the grade that will be obtained will be the weighted grade of the written tests.

Evaluation in extraordinary call

In the July call, the previous percentages will be respected, maintaining the qualifications obtained in the laboratory practices and in the resolution of exercises and questions.

In this call, students will be able to recover the qualification corresponding to the written tests (60%) by taking a global test. To pass the subject, you must achieve a score equal to or greater than 4 points out of 10 in this test. The final grade of the subject will be the weighted addition of the marks for all the sections, as long as the required score are reached. If this is not the case, the final mark for the subject will be the weighted grade of the global test.

Global evaluation

Students who wish to opt for the global evaluation (EG) must request it within the period and in the manner established by the Faculty. This information will be available to students before the start of the academic period. To pass the subject, it is necessary to carry out the practices and also achieve at least 50% of the maximum possible score for this activity. The students who opt for the EG will take a test in which all the content of the subject will be assessed. This test will constitute 85% of the final grade for the subject, both in the ordinary and extraordinary calls. To pass the subject, it is necessary to obtain a grade equal to or greater than 5.0 points out of 10 in this test.

Other considerations

The assessment test schedule can be found at: http://mar.uvigo.es/alumnado/examenes/

IMPORTANT: Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of professor proposed work. This fraudulent behavior will be sanctioned
