

## (\*)Escola de Enxeñaría Aeronáutica e do Espazo

### Presentation

The School of Aeronautic and Space Engineering (EEAE) of the University of Vigo at the Campus of Ourense offers the degrees of the University of Vigo that are related both to bachelor's and to master's level in the field of aeronautical or aerospace engineering.

More information about the Center and its degrees is found in this document or on the web page (<http://aero.uvigo.es>).

### Address

Escola de Enxeñaría Aeronáutica e do Espazo

Pavillón Manuel Martínez-Risco  
Campus universitario  
32004 Ourense

Tel.: +34 988 368 823  
Web: <http://aero.uvigo.es>

### Regulations and legislation

The information is available on the Center's web site (<http://aero.uvigo.es> in the section: School -> Regulations).

## Máster Universitario en Sistemas Aéreos no Tripulados

### Subjects

#### Year 1st

Code	Name	Quadmester	Total Cr.
007M189V01101	Fundamentals of unmanned aircraft systems	1st	6
007M189V01102	Operations, legislation and certification	1st	6
007M189V01103	Aerodynamics, flight mechanics and propulsion	1st	6
007M189V01104	Observation systems	1st	6
007M189V01201	Data analysis methods	2nd	6
007M189V01202	Applications in the agroforestry and environment	2nd	6
007M189V01203	Applications in engineering and architecture	2nd	6
007M189V01204	Control systems	2nd	6

O07M189V01205	Navigation and communication systems	2nd	6
O07M189V01206	Critical software development	2nd	6
O07M189V01207		2nd	9
O07M189V01208		2nd	9

E-mail	porgeira@uvigo.es			
Web	<a href="http://www.galiciadrones.es/">http://www.galiciadrones.es/</a>			
General description	This subject aims to introduce the basic foundations that underlie the flight of any UAV: Aerodynamics, Flight Mechanics, and Propulsion. Its operating principles are described and the general concepts are reviewed.			
	International students may request teachers: a) materials and bibliographic references to follow the subject in English, b) attend tutorials in English, c) tests and evaluations in English.			

**Training and Learning Results**

Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	That students know how to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
B1	That students acquire general knowledge in unmanned aerial systems engineering.
B5	That students are able to apply, in the field of unmanned aerial systems, the principles and methodologies of research such as literature searches, data collection, data analysis and interpretation, as well as the presentation of conclusions, in a clear, concise and rigorous manner.
C1	Knowledge about the main systems, on-board instruments and control station of an unmanned aircraft, as well as their influence on safety.
D8	Capacity for analysis and synthesis.
D9	Critical thinking skills and creativity.

**Expected results from this subject**

Expected results from this subject	Training and Learning Results
Understand the operation of a profile of flight, the basic performance of the aircraft and surfaces of control	A1 A2 A3 B1 B5 D8 D9
Learn which are the main systems of energy and propulsion	A1 A2 A3 B5 C1 D8 D9

Understand the basic principles of the mechanics of flight

A1  
A2  
A3  
B1  
B5  
D8  
D9

## Contents

Topic	
Introduction	Historical approximation to unmanned aerial vehicles. Ranking of the aircraft and his systems of propulsion. Terrestrial infrastructures. Management of aerial traffic. Legal environment.
Unmanned air vehicles	Principles of flight. Aircraft performance. General description of fixed wing aircraft . Controls of flight. Structure. Main instruments and systems. General description of helicopters. Controls of flight. Main instruments and systems. Multicopters.
Fluid mechanics priinciples	Compresivility. Viscosity. Limit layer and turbulence. Reynolds number. Mach number. Bernoulli's equation.. ISA.
Aerodynamics principles	Airfoils in incompresible flow. Flat plate. Cilinder. Kutta condition. Prandtl.
Introduction to the propulsion of aircraft.	Propellers: Theory of Froude; theory of the element of shovel. Propellerr adaptation. Aero jets. Push power, specific impulse and control of push in electric propulsion.
Flight mechanics	Basic flight equations. Cruise flight, ascend, descent and gliding. Banking. Wind effect. Actuators. Stability and control.

## Planning

### **Other comments on the Evaluation**

Students will deliver all the required reports during the course. All have to reach at least a 5/10 score to pass.

In June evaluation, a 5/10 is needed for students to pass the exam.

In July evaluation, a 5/10 score is also needed in the exam, as well as having scored a 5/10 on required reports.

General description	This subject presents an overview of drone observation systems based on both active and passive sensors.			

**Training and Learning Results**

Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	That students know how to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
A5	That students possess the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous.
B4	That students acquire the knowledge to develop unmanned aerial systems and plan specific operations, depending on the existing needs and apply the existing technological tools.
B5	That students are able to apply, in the field of unmanned aerial systems, the principles and methodologies of research such as literature searches, data collection, data analysis and interpretation, as well as the presentation of conclusions, in a clear, concise and rigorous manner.
C2	Knowledge of geomatics, photogrammetric and cartographic principles, navigation, aerotriangulation, interpretation and digital image processing necessary in the operation of unmanned aerial systems and know how to apply the regulations in force.
C4	Ability to develop a technical project in the field of unmanned aerial systems engineering.
D2	Ability to communicate orally and in writing in Galician.
D6	Ability to work as part of a team.
D7	Organizational and planning skills.
D8	Capacity for analysis and synthesis.
D9	Critical thinking skills and creativity.

**Expected results from this subject**

## Contents

### Topic

1. Introduction to observation systems	Motivation. Applications. Basic components of a sensor. Relevant spectral regions. Integration of sensors in UAVs
2. Radiation measurement	Ways to describe radiation propagation. Electromagnetic theory. Harmonic waves. Types of waves. Propagation of electromagnetic waves. Wave energy flow. Radiometric magnitudes and units. Photometric magnitudes and units.
3. Radiation sources	Types of radiation sources. Radiative processes: emission and reflection. Thermal sources. Kirchhoff's law. Reflection types. Lambertian sources. Source-sensor radiation transfer. Atmospheric transmission.
4. Radiation detectors	Types of radiation detectors. Photon detectors. Architectures of photon detectors. Colour detectors. Thermal detectors. Microbolometers. Noise sources.
5. Optical systems	Centered systems. Perfect system. Abbe and Herschel conditions. Paraxial optics. Cardinal elements. Coupling of optical systems. Lenses and mirrors. Aberrations. Aperture and field stops. Resolution of optical systems.
6. Image sensors	Optical systems for cameras. Transversal and angular fields. Objective basic design: telescope and wide angle. Image plane irradiance. Image resolution and sharpness. Image acquisition from UAVs. Responsivity and detectivity. Sensor sensitivity: figures of merit. Space resolution: PSF and MTF.
7. Thermal imaging	Types of thermographic systems. Output signal. Detector's general response. Image evaluation: figures of merit. Spatial resolution. Measuring instantaneous field of view. Applications.
8. Spectral imaging	Multispectral and hyperspectral systems. Classification of hyperspectral systems. Spectral variables. Separation systems. Interference band filters. Diffraction gratings. Fourier transform spectrometers.
9. RADAR systems.	RADAR basics. Synthetic Aperture Radar (SAR). RADAR as a remote sensing system. Measurement of deformations with RADAR.
10. LiDAR systems.	Fundamentals. Time-of-flight LiDAR systems. Phase difference LiDAR systems. Solid state LiDAR systems. Calibration of LiDAR systems. Measurement procedures. Point clouds.
11. Integration of remote sensing and navigation system.	Fundamentals of navigation systems. GNSS and INS systems. Integration with passive optical systems. Integration with active optical systems
12. Data analysis and image processing	Metadata. Digital image. Image definition. Object recognition and tracking. Image processing. Photogrammetry. Point cloud processing

## Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	21	21	42
Practices through ICT	21	87	108

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Lecturing	The lecturer presents the contents of the subject using projection methods for the supporting graphic material and also attending questions formulated by the students during the presentation.
Practices through ICT	The lecturer explains the tasks to develop at the laboratory and help the students to handle the instruments and follow the necessary procedures.

### Personalized assistance

Methodologies	Description
Lecturing	Mail. Videoconferencing.
Practices through ICT	Mail. Videoconferencing.

### Assessment

	Description	Qualification	Training and Learning Results
Lecturing	A series of exercises along the teaching period will be proposed, to be done by students and submitted before a dead line. They will contribute to the global note in the same proportion and will totally represent a 30% of the total score of the subject. These proofs will be recoverable, just submitting the problems before the day of the official examination.	30	A1 B4 C2 D2 A2 B5 C4 D6 A3 D7 A5 D8 D9
Practices through ICT	This part will be evaluated by means of different proofs. The laboratory work will represent a 40% of the total score for the subject. On the other hand, a report or work related to the laboratory activities to be submitted by the students before a dead line will represent a 30% of the score. The laboratory work will not be recoverable. Reports will be recovery just submitting them before the date of the official examination.	70	A1 B4 C2 D2 A2 B5 C4 D6 A3 D7 A5 D8 D9

### Other comments on the Evaluation

The student has the right to opt for the global assessment according to the procedure and the deadline established by the centre for each call. In this case the student will make an examination containing problems, exercises and questions related to the different parts of the subject, including questions related with the laboratory part.

The student submitting neither of the exercises nor any laboratory report will obtain the mark "not presented".

Second call evaluation and end-of- evaluation will be done in the same way as in the first call: students will have to submit the problems and the laboratory reports. The students who have skipped the laboratory sessions will also undertake an additional proof with questions and problems related to the experimental work, which will represent a 40% of the whole subject.

General description	This course describes fundamental concepts, principles and techniques about unmanned aerial vehicles: geometry, mechanics, hardware, control and navigation.			

English Friendly subject: International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.

**Training and Learning Results**

Code	
A3	That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
A4	That students know how to communicate their conclusions -and the ultimate knowledge and reasons that support them- to specialized and non-specialized audiences in a clear and unambiguous manner.
A5	That students possess the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous.
B3	That students acquire the ability to analyze the needs of a company in the field of unmanned aerial systems and determine the best technological solution for it.
B4	That students acquire the knowledge to develop unmanned aerial systems and plan specific operations, depending on the existing needs and apply the existing technological tools.
B5	That students are able to apply, in the field of unmanned aerial systems, the principles and methodologies of research such as literature searches, data collection, data analysis and interpretation, as well as the presentation of conclusions, in a clear, concise and rigorous manner.
C1	Knowledge about the main systems, on-board instruments and control station of an unmanned aircraft, as well as their influence on safety.
C3	Ability to interact with other technical teams in the engineering field for the planning of operations with unmanned aerial systems.
C4	Ability to develop a technical project in the field of unmanned aerial systems engineering.
D6	Ability to work as part of a team.
D7	Organizational and planning skills.
D8	Capacity for analysis and synthesis.
D9	Critical thinking skills and creativity.

**Expected results from this subject**

Expected results from this subject	Training and Learning Results
RA01: Acquire knowledge about unmanned aerial robots, their key components, state estimation, basic mechanics, design considerations, agility and maneuverability.	A3 A4 A5 B3 B4 B5 C1 C3 C4 D6 D7 D8 D9

RA03: Understand the bases of the control and navigation system, PID controls, control in 1D, 2D and 3D of multicopter, generation of trajectories, Euler-Lagrange equations and Splines.	A3 A4 A5 B3 B4 B5 C1 C3 C4 D6 D7 D8 D9
RA04: Understand the operation of multiple control systems.	A3 A4 A5 B3 B4 B5 C1 C3 C4 D6 D7 D8 D9
RA05: Know the sense & avoid devices.	A3 A4 A5 B3 B4 B5 C1 C3 C4 D6 D7 D8 D9
RA06: Understand the basics of embedded systems in real time.	A3 A4 A5 B3 B4 B5 C1 C3 C4 D6 D7 D8 D9
RA07: Know the different existing open hardware controllers and their operation.	A3 A4 A5 B3 B4 B5 C1 C3 C4 D6 D7 D8 D9

---

## Contents

Topic

---

Introduction to unmanned aerial vehicles. Key components of autonomous flight.	Multi-rotors. Estimation of states. Basic mechanics Design considerations Agility and maneuverability Selection of components.
Geometry and mechanics.	Transformations Rotations Angles of Euler. Quaternions Angular velocity. Newton-Euler equations. Main axes and main moments of inertia. Equations of movement of a multi-rotor. Linearization
Control and navigation.	PID control. 1D, 2D and 3D control of multirotor. Paths. Euler-Lagrange equations. Splines.
Control of multiple systems.	
Sense & avoid devices.	
Fundamentals of embedded systems in real time.	
Open hardware controllers.	

### Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	10	0	10
Practices through ICT	12.5	12.5	25
Mentored work	8	72	80
Seminars	3.5	3.5	7
Problem solving	12.5	12.5	25
Problem and/or exercise solving	3	0	3

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Lecturing	Exhibition by the teacher of the contents on the subject.
Practices through ICT	
Mentored work	The student, individually or in groups, prepares a document on the topic of the subject or prepares seminars, investigations, reports, essays, summaries of readings, conferences, etc.
Seminars	Orientation activity for students.
Problem solving	Activity in which problems related to the subject are formulated. The students must develop the solutions. The objective is that the students apply the theoretical contents in the resolution of small programming problems.

### Personalized assistance

Methodologies	Description
Mentored work	Tutorials in the teacher's office. It is advisable to go to these tutorials when difficulties appear in the development of the supervised work, or when the time dedicated to the non-contact activities significantly exceeds the time set in the planning.
Practices through ICT	

### Assessment

	Description	Qualification	Training and Learning Results			
Practices through ICT	(*2 entregas de prácticas autónomas a través de TIC, a ponderación de cada entrega será do 15%.	30	A3 A4 A5	B3 B4 B5	C1 C3 C4	D6 D7 D8 D9

Mentored work	1 assignment of supervised work, it will contribute 20% of the overall mark for this course	20	A3 A4 A5	B3 B4 B5	C1 C3 C4	D6 D7 D8 D9
Problem and/or exercise solving	2 written exams, short answer tests, about the contents and competences taught in the lectures and autonomous practices through ICT. These tests will be short answer, each one will contribute 25% of the overall mark for this course.	50	A3 A4 A5	B3 B4 B5	C1 C3 C4	D6 D7 D8 D9

---

### Other comments on the Evaluation

---

#### ASSESSMENT FOR ASSISTANTS IN 1ST EDITION: CONTINUOUS EVALUATION.

For the students attending the 1st edition (continuous evaluation) the following tests and deliveries will be made:

- 1 assignment of supervised work, it will contribute 20% of the overall mark for this course;
- 2 assignments of autonomous practices through ICT, each one will contribute 15% of the overall mark for this course;
- 2 written exams, short answer tests, about the contents and competences taught in the lectures and autonomous practices through ICT. These tests will be short answer, each one will contribute 25% of the overall mark for this course.

To pass the subject it is mandatory that the student make all the assignments and all the written exams, and that in each assignment and written exam obtain a mark equal to or higher than 4.0.

In the case of not making any assignments or written exam, or obtain in any assignments or written exam a mark lower than 4.0, if the overall mark is higher than 5, the final mark in the minutes will be 4.9, fail.

#### ASSESSMENT FOR NON ASSISTANTS IN 1ST EDITION.

For the students attending the 1st edition (non continuous evaluation) the following tests and deliveries will be made:

- 1 assignment of supervised work, it will contribute 20% of the overall mark for this course;
- 2 assignments of autonomous practices through ICT, each one will contribute 15% of the overall mark for this course;
- 1 written exam about the contents and competences taught in the lectures and autonomous practices through ICT. This test will be short answer and it will contribute 50% of the overall mark for this course.

To pass the subject it is mandatory that the student make all the assignments and all the written exams, and that in each assignment and written exam obtain a mark equal to or higher than 4.0.

In the case of not making any assignments or written exam, or obtain in any assignments or written exam a mark lower than 4.0, if the overall mark is higher than 5, the final mark in the minutes will be 4.9, fail.

#### ASSESSMENT FOR 2ST EDITION AND OTHER EDITIONS

The same assessment for non assistants in 1st edition

#### JUSTIFICATION OF ABSENCE

To be able to justify the absence to a exam is required a Certificate of Absence or a Consultation and Hospitalization Certificate (also called P10) issued by the SERGAS doctor, or a certificate issued by a doctor. A proof of the doctor's appointment will not be valid

**IDENTIFYING DATA****Navigation and communication systems**

Subject	Navigation and communication systems			
Code	O07M189V01205			
Study programme	Máster Universitario en Sistemas Aéreos no Tripulados			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Optional	1st	2nd
Teaching language	#EnglishFriendly Spanish			
Department				
Coordinator	González Jorge, Higinio			
Lecturers	González Jorge, Higinio González Valdés, Borja Rodríguez Vaqueiro, Yolanda			
E-mail	higinio@uvigo.gal			
Web	<a href="http://www.galiciadrones.es/">http://www.galiciadrones.es/</a>			
General description	This subject shows the fundamentals of the main navigation and communication systems used in drones.			

**Training and Learning Results**

Code	
A1	Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	That students know how to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
A4	That students know how to communicate their conclusions -and the ultimate knowledge and reasons that support them- to specialized and non-specialized audiences in a clear and unambiguous manner.
A5	That students possess the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous.
B3	That students acquire the ability to analyze the needs of a company in the field of unmanned aerial systems and determine the best technological solution for it.
B4	That students acquire the knowledge to develop unmanned aerial systems and plan specific operations, depending on the existing needs and apply the existing technological tools.
B5	That students are able to apply, in the field of unmanned aerial systems, the principles and methodologies of research such as literature searches, data collection, data analysis and interpretation, as well as the presentation of conclusions, in a clear, concise and rigorous manner.
C1	Knowledge about the main systems, on-board instruments and control station of an unmanned aircraft, as well as their influence on safety.
C3	Ability to interact with other technical teams in the engineering field for the planning of operations with unmanned aerial systems.
D6	Ability to work as part of a team.
D7	Organizational and planning skills.
D8	Capacity for analysis and synthesis.
D9	Critical thinking skills and creativity.

## Contents

Topic

1. Geodesy and aerial navigation.

2. Concept of frequency, wave and antenna.

Wave propagation.

3. Navigation system based on ground aids.

4. Satellite-based navigation systems. ADS-B systems.

5. Inertial systems.

6. Complementary filter.

7. Kalman filter.

8. Friis formula. Noise, signal to noise ratio, BER and channel capacity.

9. Analog and digital modulations. Adaptive modulations.

10. MIMO techniques

11. Advanced satellite positioning. RTK
