

(*)Escola de Enxeñaría Aeronáutica e do Espazo

Presentation

The School of Aeronautic and Space Engineering (EEAE) of the University of Vigo at the Campus of Ourense offers the degrees of the University of Vigo that are related both to bachelor's and to master's level in the field of aeronautical or aerospace engineering.

More information about the Center and its degrees is found in this document or on the web page (<http://aero.uvigo.es>).

Address

Escola de Enxeñaría Aeronáutica e do Espazo

General description	The subject of "advanced aerodynamics and aeroelasticidad" deepens in in the methods of calculation of the aerodynamic and aeroelastic loads that a fluid exerts on aerodynamic, slender and blunt bodies in distinct ranges of flight ranges of aircraft. It deepens also in the aerodynamic phenomena in subsonic, transonic, supersonic and hypersonic flight of aircraft or other vehicles, and in static and dynamic aeroelastic phenomena.			

Training and Learning Results	
Code	
A3	Understanding and mastering the laws of external aerodynamics in different flight regimes, and application to numerical and experimental aerodynamics
A4	Application of knowledge acquired in different disciplines to solve complex aeroelasticity problems
A9	Ability to design, execute and analyze ground and flight tests of aerospace vehicles, and to carry out a complete aerospace vehicle certification process.
A14	Understanding and mastery of the laws of internal aerodynamics, as well as their application, together with other disciplines, to the resolution of complex aeroelasticity and propulsive systems problems.

Expected results from this subject	
Expected results from this subject	Training and Learning Results
Knowledge and understanding of the potential theory of subsonic and supersonic wings.	A3 A14
Capacity to resolve aerodynamic problems applying the knowledges learnt.	A3 A14
Knowledge, understanding, application, analysis and synthesis of the methods applied to the study of the respond of aircraft unsteady loads.	A3 A4 A9
Knowledge, understanding, application, analysis and synthesis of the methods applied to the aeroelastic study.	A4
Knowledge, understanding, application, analysis and synthesis of aeroelasticity for wings, from a static and dynamic point of view.	A4 A9
Knowledge and understanding of the most important phenomena of the experimental aeroelasticity.	A4 A9

Contents	
Topic	
1. Subsonic aerodynamics	<ul style="list-style-type: none"> o Potential theory of wings in a subsonic compressible regime. o Subsonic and supersonic air intakes. o Numerical techniques of whirlwind methods. o Experimental techniques (wind tunnels, instrumentation and test techniques).
2. Supersonic aerodynamics	<ul style="list-style-type: none"> o Transonic phenomena in profiles and wings. o Supersonic wing power theory. o Potential theory of slender bodies. o Subsonic and supersonic air intakes. o Hypersonic regime

3. Static aeroelasticity	<ul style="list-style-type: none"> o Continuous systems and discrete systems. Forced vibrations of continuous systems. o Approximate methods for solving continuous systems. Static aeroelasticity of the wings. Divergence and reversal of command.
4. Dynamic aeroelasticity	<ul style="list-style-type: none"> o Dynamic aeroelasticity of wings. o Advanced aeroelasticity. Aeroelasticity in the Laplace domain. Nonlinear aeroelasticity. Aeroservoelasticity. o Structural dynamics and aeroelasticity tests. Aeroelastic tests in flight.

Planning			
	Class hours	Hours outside the classroom	Total hours
Case studies	10	60	70
Laboratory practical	2	2	4
Lecturing	29	0	29
Problem solving	4.5	0	4.5
Autonomous problem solving	0	10	10
Previous studies	0	30	30
Objective questions exam	1.5	0	1.5
Presentation	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Case studies	Realization of practical case studies on the contents of the subject, which will be explained and started in the classroom to be finished and delivered by the students outside the classroom. The case studies will require the use of software and/or the wind tunnel.
Laboratory practical	Realization of programmed practices using the wind tunnel. The realization of the practical requires the preparation of the same by means of a previous design, the assistance to the practical sessions and the realization of a report on the part of the group of students.
Lecturing	Presentation of a topic or resolution of problems by the teaching staff according to a previously established script.
Problem solving	Resolution of problems and/or exercises that deal with specific aspects of the contents of the subject, developed by the teaching staff and/or the students in the classroom
Autonomous problem solving	Resolution of problems and/or exercises that deal with specific aspects of the contents of the subject, developed by the students outside the classroom
Previous studies	Students study autonomously, with the support of the teaching staff if required according to the procedures established by the university for tutorials

Personalized assistance	
Methodologies	Description
Case studies	Realization of practical case studies on the contents of the subject, which will be explained and started in the classroom to be finished and delivered by the students outside the classroom. The students will have the necessary tutorials with the teaching staff to monitor the development of the case studies.
Previous studies	Support tutorials for students to study independently, according to the procedures established by the university.

Assessment			
	Description	Qualification	Training and Learning Results
Case studies	Five study cases for the resolution of which software and/or experimentation will be used. The qualification of each of them will be 10% (three of the study cases), and 15% (two of the study cases).	60	A3 A4 A9 A14
Objective questions exam	Exam based on the resolution of problems and/or conceptual questions about the contents of the subject. It will be on the official exam date. Minimum note of 5.0.	35	A3 A4 A9 A14
Presentation	Presentations of the results of the case studies to be carried out by the students throughout the course.	5	A3 A4 A14

Other comments on the Evaluation

First call

To pass the subject on the 1st opportunity, it will be necessary to obtain a score of more than 5 points out of 10 in the joint evaluation of the continuous evaluation during the development of the classes and the exam on the official date. In addition, the exam grade on the official date must be greater than or equal to 5 points out of 10. The final grade of the continuous assessment will be obtained according to the indicated percentages.

For the global evaluation, an exam will be carried out on the day of the official date, which includes all the contents of the subject, including the contents and methods used in the case studies. The qualification of said exam to pass the subject will be 5 points out of 10.

The evaluation test schedule officially approved by the Junta de Centro da EEAE is published on the web

<http://aero.uvigo.es/gl/docencia/exames>

Continuous assessment tests will be carried out during school hours"

The student has the right to opt for the global assessment according to the procedure and the deadline established by the centre for each call.

Second call

The student must take the second call exam of all the contents of the subject, which will mean 100% of the grade, if the final continuous assessment grade is less than 5 points out of 10. They will also have to sit the second call exam in the following cases:

- Obtain a grade of less than 5 points out of 10 in the first chance final exam

In case of obtaining a grade greater than or equal to 5 in the second chance exam, the final grade for the subject will be the highest grade between:

* the 2nd call exam

* the average with the activities carried out during the course (averaging with the percentages of the evaluation table substituting the mark of the first call exam for the second call)

End-of-program call

For the end of degree evaluation, an exam will be held on the day of the official date, which includes all the contents of the subject. The qualification of said exam to pass the subject will be 5 points out of 10.

Metodoloxía docente

	Description
Lección maxistral	Exposición por parte do profesor dos contidos fundamentais da materia.
Resolución de problemas	Presentación e resolución por parte do profesor de problemas relativos aos procesos de fabricación estudados de maneira teórica coa participación activa das/os estudantes.
Prácticas de laboratorio	Introdución ao traballo con equipos de fabricación no laboratorio.
Prácticas con apoio das TIC	Introdución ao emprego de software de simulación de procesos de fabricación por parte do profesor. Coas instrucións recibidas e traballo autónomo, as/os estudantes poderán resolver problemas específicos que permitan mellorar o seu coñecemento sobre os procesos estudados.
Traballo tutelado	Realización de traballo individual e en grupos sobre temáticas propostas e realización de presentacións orais.

Other comments on the Evaluation

O modelo de avaliación é avaliación continua. O/A estudante ten dereito a optar pola avaliación global segundo o

procedemento e o prazo que estableza o centro para cada convocatoria. O exame global consistirá nun exame escrito en data oficial que cubra todos os aspectos avaliados en avaliación continua.

PRIMEIRA OPORTUNIDADE:

A materia avalíase en base a catro parámetros:

-Exames teórico-prácticos (nota máxima 2 puntos). Consistirán en dúas probas para cada unha das partes (materiais e produción). A primeira durante o desenvolvemento do curso e a segunda na data oficial de exame.

Nestas probas avalíanse os coñecementos teóricos da materia, cuestións relacionadas cos problemas e prácticas mediante un exame tipo test e resposta curta. O primeiro exame valórase en 1 punto e o segundo en 1 punto.

-Resolución de problemas (nota máxima 2 puntos). Avaliarase a entrega da resolución aos problemas expostos durante o curso nos prazos establecidos.

-Prácticas de laboratorio (nota máxima 1 punto). Deberase participar nas actividades propostas durante o curso e entregar os informes requiridos.

-Prácticas con apoio do TIC (nota máxima 1 punto). Deberase participar nas actividades propostas durante o curso e entregar os informes requiridos.

-Traballo tutelado (nota máxima 4 puntos). Deberase realizar o traballo solicitado e entregar unha memoria completa.

Aprobarán a materia aqueles alumnos que consigan unha nota igual ou superior a 5 puntos. Non se fará media no caso de que nunha parte a nota sexa inferior a 3,5 puntos, sendo a nota final de actas a nota da parte que non alcance o valor mínimo.

Non é posible recuperar ningunha proba a posteriori, salvo causa xustificada.

SEGUNDA OPORTUNIDADE:

O método de Avaliación é o mesmo que o descrito para a PRIMEIRA OPORTUNIDADE.

Poderanse gardar traballos da primeira oportunidade con cualificación >5. En ningún caso gardarase a cualificación dos exames.

OUTRAS CONSIDERACIÓNS:

En caso de detección de plaxio en calquera das probas, a cualificación final será de SUSPENSO (0) e o feito será comunicado á dirección do Centro para os efectos oportunos.

As probas desenvolveranse durante o cuadrimestre. O exame teórico-práctico inicial desenvolverase en data a definir e indicada ás/os estudantes con antelación suficiente.

O calendario de probas de avaliación aprobado oficialmente pola Xunta de Centro da EEAE atópase publicado na páxina web <http://aero.uvigo.es/gl/docencia/exames>

A avaliación fin de carreira seguirá os mesmos criterios ca avaliación de 2ª oportunidade.

Methodologies	
	Description
Lecturing	Explanation by the professor of the contents on the subject of study, the theoretical bases and/or the guidelines for work, exercise or project to be developed by the student.
Practices through ICT	Activities of application of knowledge to specific situations, and of acquisition of basic skills related with the subject of study in the informatic partical classes of simulation of flows
Mentored work	Activity in which one or several longer problems are formulated, where the student has to apply the knowledge acquired in the masterclasses and in the numerical simulation classes.
Problem solving	Activity in which problems and/or short exercises related with the subject are formulated. The student has to find the correct solutions by means of the application of procedures, use of available information. The student has to interpretate the obtained results. It is a complementary activity to the lectures

Personalized assistance	
Methodologies	Description
Lecturing	Student questions formulated during the lectures will be addressed, as well as questions asked during the computer practices. Likewise, students will be attended personally during the subject tutorships.

Practices through ICT	Student questions formulated during the lectures will be addressed, as well as questions asked during the computer practices. Likewise, students will be attended personally during the subject tutorships.
Mentored work	Students will be attended personally during the subject tutorships.
Problem solving	Students will be attended personally during the subject tutorships.

Assessment

	Description	Qualification	Training and Learning Results
Mentored work	Evaluation task in which the student solves numerically a specific flow problem assigned by the professor. The student will analyse it and will resolve the problem using the numerical techniques. The work will be uploaded to the Moovi platform before the official date of the exam	40	A2 A12 A13
Problem solving	Realization of two examinations. These exams can include enclosed questions with different alternative of answer (true/false, multiple election, pairing of elements...), or the application of the knowledge to the resolution of specific problems of fluids, or the realisation of a work of numerical simulation nature. Each one of the examinations will have a weight of 30% on the final note of the subject. One of these two exams will take place in the official final exam date	60	A2 A12 A13

Other comments on the Evaluation

First opportunity evaluation:

To pass the subject in the 1st opportunity, the mark should be equal or greater than 5 points over 10 when averaging the marks of all the exams, works and the final mark of the exam carried out during the official exam date.

The student has right to opt for a global examination in a unique exam. To opt for this, the student should follow the official procedure established by the school.

Global Evaluation:

It will consist on a unique exam during the official date, that includes all the contents of the subject, including the contents and methods used in the cases of study. The marks obtained in this exam should be equal or greater than 5 points over 10 in order to pass the subject

The exams calendar will be published in the official web page of the school

Second opportunity evaluation:

The students will take an exam that include contents of all the subject, if the final note of the exams and works done during the teaching period is lower than 5 points over 10.

End of studies exam:

For the evaluation of end of studies exam, an exam during the official date set by the school will be taken by the students enrolled in this type of exams. The exam will include all contents. To pass the subject, the student must obtain a mark equal or greater than 5 over 10.

Recommendations

Other comments

Devote the time indicated for personal work, as well as use the personal tutorships with the professor to solve the possible doubts that arise during the personal work of the student.

It is recommended to study continuously from the very beginning of the subject as well as to maintain an active attitude in the classes.

Methodologies

	Description
Case studies	Realization of practical case studies on the contents of the subject, which will be explained and started in the classroom to be finished and delivered by the students outside the classroom. The case studies will require the use of software.

Lecturing	Presentation of a topic or resolution of problems by the teaching staff according to a previously established script.
Previous studies	Students study autonomously, with the support of the teaching staff if required according to the procedures established by the university for tutorials
Problem solving	Resolution of problems and/or exercises that deal with specific aspects of the contents of the subject, developed by the teaching staff and/or the students in the classroom
Autonomous problem solving	Resolution of problems and/or exercises that deal with specific aspects of the contents of the subject, developed by the students outside the classroom

Personalized assistance

Methodologies	Description
Case studies	Realization of practical case studies on the contents of the subject, which will be explained and started in the classroom to be finished and delivered by the students outside the classroom. The students will have the necessary tutorials with the teaching staff to monitor the development of the case studies.
Previous studies	Support tutorials for students to study independently, according to the procedures established by the university.

Assessment

	Description	Qualification	Training and Learning Results
Case studies	Four case studies to be carried out during the semester distributed over time, and software will be used for their resolution. The qualification of each of them will be 15%.	60	A5
Objective questions exam	Exam based on solving problems and/or conceptual questions about the contents of the subject. It will be on the official exam date. Minimum grade of 5.0.	35	A5
Presentation	Presentations of the results of the case studies to be carried out by the students throughout the course.	5	A5

Other comments on the Evaluation

First call

To pass the subject on the 1st opportunity, it will be necessary to obtain a score of more than 5 points out of 10 in the joint evaluation of the continuous evaluation during the development of the classes and the exam on the official date. In addition, the exam grade on the official date must be greater than or equal to 5 points out of 10. The final grade of the continuous assessment will be obtained according to the indicated percentages.

For the global evaluation, an exam will be carried out on the day of the official date, which includes all the contents of the subject, including the contents and methods used in the case studies. The qualification of said exam to pass the subject will be 5 points out of 10.

The evaluation test schedule officially approved by the Junta de Centro da EEAE is published on the web

<http://aero.uvigo.es/gl/docencia/exames>

Continuous assessment tests will be carried out during school hours"

The student has the right to opt for the global assessment according to the procedure and the deadline established by the centre for each call.

Second call

The student must take the second call exam of all the contents of the subject, which will mean 100% of the grade, if the final continuous assessment grade is less than 5 points out of 10. They will also have to sit the second call exam in the following cases:

- Obtain a grade of less than 5 points out of 10 in the first chance final exam

In case of obtaining a grade greater than or equal to 5 in the second chance exam, the final grade for the subject will be the highest grade between:

* the 2nd call exam

* the average with the activities carried out during the course (averaging with the percentages of the evaluation table

substituting the mark of the first call exam for the second call)

End-of-program call

For the end of degree evaluation, an exam will be held on the day of the official date, which includes all the contents of the subject. The qualification of said exam to pass the subject will be 5 points out of 10.

General description	In the subject "Advanced calculation of aerospace structures" we start from the more general knowledge acquired in the degree about the functioning of structures, to specify structures for aerospace use, which have requirements that differentiate them from other structures. After completing the course, the student should be able to design and analyze the combinations of structures and materials in the most common boundary conditions in the industry.			

Training and Learning Results

Code	
A1	Ability to design, build, inspect, certify and maintain all types of aircraft and spacecraft
A6	Adequate knowledge of metallic and composite materials used in aerospace vehicle manufacturing
A8	Knowledge and skills for the structural analysis and design of aircraft and spacecraft, including the application of advanced structural design and calculation programs

Expected results from this subject

Expected results from this subject	Training and Learning Results
GO1. Aptitude to project, build, inspect, certify and keep all type of aircraft and space vehicles.	A1
GO6. Suitable knowledge of the metallic materials and compound materials used in the manufacture of aerospace vehicles.	A6
GO8. Knowledges and capacities for the analysis and structural design of the aircraft and space vehicles, including the application of programs of calculation and design advanced of structures.	A8

Contents

Topic	
Types of aerospace structures	-Typologies of structures -Structures of aeronautical use -Structures of space use
Types of structural analysis	-Static analysis -Dynamic Analysis -Analysis stability
Materials for aerospace use	-Linear elastic materials -Non-linear elastic materials -Plastic materials -Visco-elastic materials
Multidisciplinary analysis and optimisation	-Multidisciplinary analysis joined up -Optimisation of structures

Other comments on the Evaluation

First Opportunity Evaluation

To pass the subject on the 1st opportunity, it will be necessary to obtain a grade higher than 5 points out of 10 in the overall assessment of continuous evaluation during the course and the exam on the official date. Additionally, the grade for the official exam must be equal to or higher than 5 points out of 10. The final grade for continuous evaluation will be obtained according to the indicated percentages.

For the overall evaluation, there will be an exam on the official date, which includes all the contents of the subject, including the contents and methods used in the case studies. The passing grade for this exam will be 5 points out of 10.

The officially approved schedule of evaluation tests by the EEAE Center Board will be published on the website:

<http://aero.uvigo.es/gl/docencia/exames>

The continuous evaluation tests will be conducted during regular class hours.

The student has the right to choose the overall evaluation according to the procedure and deadline established by the institution for each examination session.

Second Opportunity Evaluation

Students must take the resit exam, which covers all the subject contents and accounts for 100% of the final grade, if the final grade for continuous evaluation is lower than 5 points out of 10. They must also take the resit exam in the following cases:

- Obtaining a grade lower than 5 points out of 10 in the final exam of the first opportunity.

If a grade equal to or higher than 5 is obtained in the resit exam, the final grade for the subject will be the higher grade between:

- the resit exam grade,
- the average grade from the coursework activities (averaging with the percentages specified in the evaluation table, substituting the grade of the first opportunity exam with the grade of the resit exam).

Final Year Evaluation

For the final year evaluation, there will be an exam on the official date, which includes all the contents of the subject. The passing grade for this exam will be 5 points out of 10.

Lecturing	Classroom attention. Tutorials with previous appointment. Attention by email. Mail: higiniog@uvigo.gal
Laboratory practical	Classroom attention. Tutorials with previous appointment. Attention by email. Mail: higiniog@uvigo.gal
Mentored work	Tutorials with previous appointment. Attention by email. Mail: higiniog@uvigo.gal

Assessment

	Description	Qualification	Training and Learning Results
Laboratory practical	Laboratory report	10	A21 A22 A23 A24
Mentored work	Project	30	A21 A22 A23 A24
Objective questions exam	Partial exam I	30	A21 A22 A23 A24
Objective questions exam	Partial examn II	30	A21 A22 A23 A24

Other comments on the Evaluation

The student has the right to opt for the global assessment according to the procedure and the deadline established by the centre for each call.

The continuous assessment will be carried out during university class hours.

The official exam dates are used for the student to take an exam-only assessment of the course if he/she does not follow the continuous assessment or fails it. This exam will correspond to 100% of the course and will have a duration of 2.5 hours.

No marks for each of the parts will be kept between different exam sessions.

The calendar of evaluation tests officially approved by the Faculty is published on the web page:

<http://aero.uvigo.es/es/docencia/examenes/>
