#### Educational guide 2023 / 2024

# Universida<sub>de</sub>Vigo

#### **Presentation**

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The stablisment of the Universitary System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but no the pioneering spirit of the chemists in research of in the quest for a better service to the society.

#### Degrees given in the Faculty

Degree in Chemistry

- Masters And Doctorates:
  - o Industry and Chemical Research and Industrial Chemistry
  - o Theoretical chemistry and Computational Modelling
- Master:
  - o Science and Technology of Conservation of Fishing Products

General	In this subject the modifications of the organoleptic ch	aracteristics tha	t occur after the		
description	capture of the fish and the effects of refrixeration and				
	fishing products, as well as the freshness determination			vill be studied	
	Methods of recognizing food alterations during storage				
	the biochemical changes subsequent to the capture ar				
	microbiological criteria and procedures to analyze fish	quality and rela	ted legislation.		
	Even the quick recognition tests will be studied				
	and specific techniques of the alterations of frozen foo	ds and preserve	d in state		
	frozen.				

- A2 That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
- A3 That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
- A4 That students know how to communicate their conclusions, and the knowledge and ultimate reasons that sustain them, to specialized and non-specialized audiences in a clear and unambiguous way.
- B1 That the students acquire the comprehension, analysis and synthesis capacities.
- B2 That students develop oral and written communication skills in the two co-official languages of autonomy (Spanish and Galician).
- B3 That the students develop the skills to perform experimental work, handling of material and biological elements and related programs.
- C11 Approach to quality control of each of the production lines of fishery products. Basic knowledge of product quality management.
- C12 Acquire basic knowledge and interpret the legislation applicable to the facilities where the handling and treatment of fishery products is carried out along the commercial chain: hygiene, labeling, food safety, plant self-control (APPCC), etc.
- D1 Ability to understand the meaning and application of the gender perspective in the different fields of knowledge and professional practice with the aim of achieving a more just and egalitarian society.
- D2 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.
- D3 Autonomous work capacity and decision making.
- D5 Commitment to ethics in the profession and in society.

Methodologies	
	Description
Lecturing	Exhibition by the teacher of the contents on the subject matter of study, theoretical bases and / or exercise or projects to be developed by the student.
Laboratory practical	Laboratory practical classes:  Determination of sensory, chemical and microbiological parameters of quality, composition nutritional, presence of additives, contaminants
Seminars	Personalized and/or group tutorials: student interviews with the course's teaching staff for advice / development of activities of the learning process.

Personalized assistance				
Methodologies	Description			
Lecturing	The lecturers will anwer the questions posed by the students about the contents of the course, in face-to-face or online tutorials, or by e-mail.			
Laboratory practica	The student will be guided in the acquisition of basic skills and problem solving related to the subject matter of study. The progress of the student will be monitored.			
Seminars	The student receives, in group and/or individually, advice from the teacher on the theoretical and practical concepts of the subject, for the development of the objectives of the course.			

Assessment						
	Description	Qualification			ning a	
Lecturing	The resolution of problems and practical cases, as well as the autonomous work of the student.	20	A2 A3 A4	B1 B2	C11 C12	D1 D2 D3 D5
Laboratory practical	The performance and results of the internships and the completion of the internship report or questionnaire will be evaluated.	n 20	A2 A3 A4	B1 B2 B3	C11 C12	D1 D2 D3 D5
Objective questions exam	The theoretical knowledge acquired in this course will be evaluated through a test with multiple choice questions.	40	A2 A3 A4	B1 B2	C11 C12	D1 D2 D3 D5
Self-assessment	Test-type questionnaires will be carried out through the teaching platform, so that students can evaluate their degree of acquisition of the subject's competences.	20	A2 A3 A4	B1 B2 B3	C11 C12	D1 D2 D3 D5

#### Other comments on the Evaluation

To pass the course, the student must obtain a grade equal to or greater than 4.5 points out of 10 in the final exam. In case of not reaching this grade, a "Fail" grade will be assigned, with the numerical value of the grade obtained in the final exam.

General	In this course, Self-control in the food chain, prod	duction control, logistic	s and assuranc	e, quality management
description	and quality certification will be addressed.			

- A2 That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
- A3 That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
- A5 That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.
- B1 That the students acquire the comprehension, analysis and synthesis capacities.
- B4 That the students develop the problem-solving abilities of application of the theoretical knowledge in practice.
- C13 Assess the importance of the control and certification of the quality of fishery products as a commercial weapon and with a view to traceability and food safety.
- C14 Know the food alert management procedures by the competent authority and those responsible for the food chain
- C15 Know the critical variables that determine the viability of a product or novel processes. Use tools to obtain critical information for feasibility.
- D1 Ability to understand the meaning and application of the gender perspective in the different fields of knowledge and professional practice with the aim of achieving a more just and egalitarian society.
- D2 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.
- D5 Commitment to ethics in the profession and in society.

Description

Lecturing	Explanation by the lecturer of the contents of the course, theoretical bases and exercises to be developed by the student. Blackboard and audiovisual means will be used.
Case studies	Resolution of cases, doubts and queries both individually or in a small group regarding the follow-up and study of the lessons of the subject.
Studies excursion	Activities of application of knowledge to specific situations and acquisition of basic and procedural skills related to the subject matter of study. They take place in non-academic outdoor spaces. These include field practices, visits to events, research centers, companies, institutions, etc.
Seminars	Personalized and/or group tutorials: student interviews with the course's teaching staff for advice / development of activities of the learning process.

Personalized assistance			
Methodologies	Description		
Lecturing	The lecturers will answer the questions posed by the students, in face-to-face or online tutorials, or by e-mail.

General	Carry out an internship in a company in the seafood co					
description	tasks that, based on the knowledge acquired, allow them to better understand the productive environment of					
	the Sector in a global context.					
	The student will participate in the activities that are so					
	company's staff. These activities will be framed within the existing processes in the company itself related to					
	the conservation of fishing products.					

- Al Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context.
- A2 That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
- A3 That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
- A4 That students know how to communicate their conclusions, and the knowledge and ultimate reasons that sustain them, to specialized and non-specialized audiences in a clear and unambiguous way.
- A5 That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.
- B1 That the students acquire the comprehension, analysis and synthesis capacities.
- B2 That students develop oral and written communication skills in the two co-official languages of autonomy (Spanish and Galician).
- B3 That the students develop the skills to perform experimental work, handling of material and biological elements and related programs.
- B4 That the students develop the problem-solving abilities of application of the theoretical knowledge in practice.
- B5 That the students develop the abilities of teamwork, enriched by the pluridisciplinarity.
- B6 That the students develop the ability of elaboration, presentation and defense of works or reports.
- C1 Know and differentiate the main fishing and aquaculture species of commercial interest in our country, with its main biological characteristics.
- C2 Know the parameters of safety and characterization of the quality of fishery products, as well as their possible toxicological risks, and the legislation applicable to such products.
- C3 Acquire basic knowledge about laboratory analytical control of fishery products, including the biotic and abiotic contaminants potentially present in them.
- C4 Know the main environmental aspects that affect the processing and conservation of seafood products: control and treatment of liquid effluents, sludge, soil and atmospheric emissions. Applicable legislation.
- C5 Acquire the knowledge of business management in industries of the sector.
- C6 Acquire knowledge about marketing and marketing for fishery and aquaculture products.
- C7 Know the operations and basic technologies used in the conservation and transformation of sea products by cold, heat or other physical-chemical methods: refrigeration, freezing, sterilization, pasteurization, semi-preservation.
- C8 Study the different forms of preparation and packaging systems for sea products treated by cold, heat or other methods, both traditionally and new technological orientations: restructured products, prepared dishes, modified atmospheres, high pressures, etc.
- C9 Understand the organization of production in the industry of fishery and aquaculture products treated by cold, heat and other processes. Production methods and their logistics.

- C10 Determine the criteria and procedures for the control of the quality of the products of the fishing and of the containers and packaging used in its commercial circuit. Know the procedures for its analytical control and defect detection.
- C11 Approach to quality control of each of the production lines of fishery products. Basic knowledge of product quality management.
- C12 Acquire basic knowledge and interpret the legislation applicable to the facilities where the handling and treatment of fishery products is carried out along the commercial chain: hygiene, labeling, food safety, plant self-control (APPCC), etc.
- C13 Assess the importance of the control and certification of the quality of fishery products as a commercial weapon and with a view to traceability and food safety.
- C14 Know the food alert management procedures by the competent authority and those responsible for the food chain
- C15 Know the critical variables that determine the viability of a product or novel processes. Use tools to obtain critical information for feasibility.
- D1 Ability to understand the meaning and application of the gender perspective in the different fields of knowledge and professional practice with the aim of achieving a more just and egalitarian society.
- D2 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.
- D3 Autonomous work capacity and decision making.
- D4 Creativity, initiative and entrepreneurial spirit.
- D5 Commitment to ethics in the profession and in society.

External internships in an industry in the canning Address specific practical tasks that, based on the knowledge acquired, sector and / or in a research center.

allow a better understanding of the productive environment of the sector in a global context.

Planning			
	Class hours	Hours outside the classroom	Total hours
Practicum, External practices and clinical practices	220	0	220
Seminars	3	0	3
Report of practices, practicum and external practice	es 2	0	2

Methodologies	
	Description
Practicum, External practices and clinical practices	The students will be integrated into an industry in the seafood preservation sector.  The students will learn and have an overview of all the modules of the production process of the industry where they carry out the internship.
	The students will be assigned a task, within the various modules that the production process involves. The activity of the companies with which the collaboration agreements have been reacher allows students to acquire competencies in the procedures related to the various processes of conservation, safety, quality and technology, environmental management, marketing and innovation and sustainability.
Seminars	The activity carried out within the industry will be followed by the tutors of the master's degree and by a person in charge of the company appointed to supervise and guide the students in the tasks assigned.

Personalized assistance	
Methodologies	Description
Practicum, External practices and clinical practices	Advise students on issues and difficulties that arise during their external internships.
Seminars	An academic responsible person and another from the company will be assigned, to supervise and advise the student's work, and a contact will be maintained with the persons in charge of the Master.

General	Development by the students of a work of theoretical	and/or experime	ntal content rela	ited to the industry of
description	conservation of fishing products. The work will be of an individual nature, supervised by professors of the			
	master's degree and aimed at evaluating the compete	nces associated	with it.	- ·

- A1 Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context.
- A2 That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
- A3 That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
- A4 That students know how to communicate their conclusions, and the knowledge and ultimate reasons that sustain them, to specialized and non-specialized audiences in a clear and unambiguous way.
- A5 That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.
- B1 That the students acquire the comprehension, analysis and synthesis capacities.
- B2 That students develop oral and written communication skills in the two co-official languages of autonomy (Spanish and Galician).
- B3 That the students develop the skills to perform experimental work, handling of material and biological elements and related programs.
- B4 That the students develop the problem-solving abilities of application of the theoretical knowledge in practice.
- B5 That the students develop the abilities of teamwork, enriched by the pluridisciplinarity.
- B6 That the students develop the ability of elaboration, presentation and defense of works or reports.
- C1 Know and differentiate the main fishing and aquaculture species of commercial interest in our country, with its main biological characteristics.
- C2 Know the parameters of safety and characterization of the quality of fishery products, as well as their possible toxicological risks, and the legislation applicable to such products.
- C3 Acquire basic knowledge about laboratory analytical control of fishery products, including the biotic and abiotic contaminants potentially present in them.
- C4 Know the main environmental aspects that affect the processing and conservation of seafood products: control and treatment of liquid effluents, sludge, soil and atmospheric emissions. Applicable legislation.
- C5 Acquire the knowledge of business management in industries of the sector.
- C6 Acquire knowledge about marketing and marketing for fishery and aquaculture products.
- C7 Know the operations and basic technologies used in the conservation and transformation of sea products by cold, heat or other physical-chemical methods: refrigeration, freezing, sterilization, pasteurization, semi-preservation.
- C8 Study the different forms of preparation and packaging systems for sea products treated by cold, heat or other methods, both traditionally and new technological orientations: restructured products, prepared dishes, modified atmospheres, high pressures, etc.
- C9 Understand the organization of production in the industry of fishery and aquaculture products treated by cold, heat and other processes. Production methods and their logistics.
- C10 Determine the criteria and procedures for the control of the quality of the products of the fishing and of the containers and packaging used in its commercial circuit. Know the procedures for its analytical control and defect detection.
- C11 Approach to quality control of each of the production lines of fishery products. Basic knowledge of product quality management.

- C12 Acquire basic knowledge and interpret the legislation applicable to the facilities where the handling and treatment of fishery products is carried out along the commercial chain: hygiene, labeling, food safety, plant self-control (APPCC), etc.
- C13 Assess the importance of the control and certification of the quality of fishery products as a commercial weapon and with a view to traceability and food safety.
- C14 Know the food alert management procedures by the competent authority and those responsible for the food chain
- C15 Know the critical variables that determine the viability of a product or novel processes. Use tools to obtain critical information for feasibility.
- D1 Ability to understand the meaning and application of the gender perspective in the different fields of knowledge and professional practice with the aim of achieving a more just and egalitarian society.
- D2 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.
- D3 Autonomous work capacity and decision making.
- D4 Creativity, initiative and entrepreneurial spirit.
- D5 Commitment to ethics in the profession and in society.

Contents	
Topic	

- Selection of the topic to be studied.

- Search and selection of bibliographical sources
  Laboratory work, pilot plant or information in industries of the sector.
  Advice with the coordinators of the module or the personnel from industry.
- Preparation of reports.
- Presentation and defense of the work.

Planning			
	Class hours	Hours outside the classroom	Total hours
Project based learning	0	200	200
Presentation	2	8	10
Project	2	38	40

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Project based learning	Elaboration of a written document where it is reflected: content of the document, depth of the topic, adequate planning and sequencing, management of bibliographic sources, as well as presentation of results, conclusions and personalized opinions. Ideas of advance and future perspectives of the subject.

Personalized assistance			
Methodologies	Description		
Project based learning	The student will be guided in the acquisition of basic skills and problem solving related to the subject matter of study. The progress of the student will be monitored.		
Tests	Description		
Project	Guide the student in the writing of the work. elaboration of objectives, results and conclusions.		

Assessme	nt					
<u> </u>	Description	Qualification			ning a	
					ing Re	
Presentation	nPresentation by the students before an academic jury of the work carried out, individually or in groups.	30	A1 A2 A3 A4 A5	B1 B2 B3 B4 B5 B6	C1 C2 C3 C4 C5 C6 C7 C8 C9 C10 C11 C12 C13 C14 C15	D1 D2 D3 D4 D5
Project	For the evaluation of the work, the content of the written document will be taken into account. Depth of the topic, adequate planning and sequencing, management of adequate bibliographical sources, as well as presentation of results, conclusions and personalized opinions will be assessed. The quality of the project will be evaluated taking into account the evaluation of the jury (50% total qualification) and that of the tutor/s (20% total qualification).	70	A1 A2 A3 A4 A5	B1 B2 B3 B4 B5 B6	C1 C2 C3 C4 C5 C6 C7 C8 C9 C10 C11 C12 C13 C14 C15	D1 D2 D3 D4 D5
