Resultados de Formación y Aprendizaje

Code

B3	CG3 Conocimiento en materias básicas y tecnológicas, que les capacite para el aprendizaje de nuevos métodos y teorías, y les dote de versatilidad para adaptarse a nuevas situaciones.
B4	CG4 Capacidad de resolver problemas con iniciativa, toma de decisiones, creatividad, razonamiento crítico y de comunicar y transmitir conocimientos, habilidades y destrezas en el campo de la Ingeniería Industrial en la mención de Química Industrial.
B8	CG8 Capacidad para aplicar los principios y métodos de la calidad.
C20	CE20 Capacidad para el análisis, diseño, simulación y optimización de procesos y productos.
D2	CT2 Resolución de problemas.
D6	CT6 Aplicación de la informática en el ámbito de estudio.
D9	CT9 Aplicar conocimientos.
D10	CT10 Aprendizaje y trabajo autónomos.
D17	CT17 Trabajo en equipo.

Resultados previstos en la materia

Expected results from this subject

Training and Learning Results

Identificar los puntos críticos y de control en una planta	B3 B4	C20	D6 D9 D17
Diseñar un sistema de control estadístico de proceso.	B3 B4 B8	C20	D6 D9 D10
Realizar estudios de capacidad del proceso desde el punto de vista de la calidad del producto	B3 B4 B8	C20	D2 D6 D9 D17

Contenidos

Topic

Introducción al control integral de calidad de materias primas, productos semielaborados y terminados. Diseño, producción, venta y postventa.	Introducción al control integral de calidad de materias primas, productos semielaborados y terminados. Diseño, producción, venta y postventa.
Inspección, aceptación y calidad concertada. Trazabilidad. Control e identificación de puntos críticos de las principales industrias químicas y de proceso.	Trazabilidad y puntos críticos de riesgo asociados a la calidad y variables características de calidad de las principales industrias químicas y de las principales industrias químicas y de proceso.
Estudio de la capacidad. Gráficos de control SPC, Estudio de capacidad. Gráficos de control predictivos, SPC. Análisis y toma de decisiones de mejora de la calidad de los productos en la industria química y de proceso. Diseño de un sistema experto.	Inspección, aceptación y calidad concertada. Métricas de medida de calidad.

Ejemplos prácticos de aplicación en industrias químicas y de proceso, orientados al control de calidad de productos.	Trazabilidad. Muestreo de aceptación. Determinación de la capacidad y gráficos SPC.

Metodologías	
	Description
Lección magistral	Exposición en clase de los conceptos y procedimientos claves para el aprendizaje del contenido del temario. Se fomentará la participación activa del alumno
Estudio de casos	Resolución de casos prácticos y ejercicios de aplicación de los conocimientos relacionados con la materia con la ayuda del profesor y de forma autónoma

Atención personalizada

Methodologies Description	
Estudio de casos	Atención para la resolución de dudas y seguimiento del trabajo diario del alumno

Evaluación		Description	Qualification	Training and Learning Results		
Estudio de casos	Resolución de problemas concretos que describan situaciones reales en la industria química y de proceso.	20	B3 B4 B8	C20	D2 D6 D9 D10 D17	
Resolución de problemas y/o ejercicios	Resolución de cuestiones y/o ejercicios teórico-prácticos aplicando los conocimientos adquiridos a realizar en la semana 9.	40	B3 B4 B8	C20	D2 D6 D9 D10 D17	
Resolución de problemas y/o ejercicios	Resolución de cuestiones y/o ejercicios teórico-prácticos aplicando los conocimientos adquiridos a realizar en la fecha fijada por el centro.	40	B3 B4 B8	C20	D2 D6 D9 D10 D17	

Other comments on the Evaluation

Alumnos con evaluación continua:

Aquellos alumnos que obtengan al menos el 50% de la nota de la prueba práctica que se realizará a mitad del cuatrimestre (semana 9) pueden optar por liberar esa materia en el examen final.

-En la segunda convocatoria no se conserva la nota de la primera prueba de evaluación continua.

Alumnos con renuncia oficial a la evaluación continua:

-Para aquellos alumnos con renuncia a la evaluación continua concedida oficialmente por el centro el examen final incluirá una parte específica de los casos prácticos y valdrá el 100% de la nota.

Compromiso ético:

Se espera que el alumno presente un comportamiento ético adecuado. En el caso de detectar un comportamiento no ético (copia, plagio, utilización de aparatos electrónicos no autorizados, y otros) se considerará que el alumno no reúne los requisitos necesarios para superar la materia. En este caso la calificación global en el presente curso académico será acorde a la normativa vigente.

General description	Asignatura obligatoria que se imparten no 7º cuatrimestre do Grao en Química Industrial, unha vez que o alumno estudou as materias nas que deben demostrar os coñecementos necesarios sobre: - Métodos numéricos empregados na enxeñaría química. - Deseño de reactores químicos. - Deseño de equipos para operacións de separación. - Deseño de equipos de transferencia de calor empregados en procesos químicos. - Control e seguridade dos procesos químicos.			
	Esta materia impártese no último ano. O alumno accede despois de adquirir e desenvolver habilidades para xestionar facilmente as ferramentas informáticas da informática dixital, nas que o uso seguirá funcionando e afondar.			

Resultados de Formación e Aprendizaxe

Resultados previstos na materia

Expected results from this subject	Training and Learning Results		
Simular un diagrama de fluxo dun proceso en réxime estacionario. Coñecer os métodos mais importantes de simulación de procesos (modular e baseado en ecuacións). Analizar as características estruturais dun proceso químico e determinar o orde de cálculo das unidades, establecer o fluxo de información e seleccionar as variables ou correntes de corte de forma axeitada. Resolver problemas de gran escala modelados por sistemas de ecuacións alxebraicas (sistemas dispersos).	B3	C20	D6
	B4		D8
			D9
			D10
			D17
Analizar un proceso, determinar os seus graos de libertade e escolher as mellores variables para a súa optimización. Coñecer os fundamentos básicos dos algoritmos mais importantes de optimización determinista, tanto en variable continua como discreta.	B3	C20	D6
	B4		D9
			D17
Modelar axeitadamente un problema de optimización e/ou síntese de procesos e utilizar as ferramentas axeitadas para resolverlo.			
Coñecer os fundamentos básicos do deseño de procesos mediante simuladores de proceso. A descomposición xerárquica e os fundamentos do deseño baseado en superestructuras. Aplicar os conceptos de integración de enerxía para o deseño de redes de intercambio de calor. Saber adquirir y utilizar información bibliográfica y técnica referida a esta materia. Coñecemento e aplicación da terminología inglesa empregada para describir os conceptos correspondientes a esta materia.	B3	C20	D2
	B4		D6
			D9
			D10

Contidos

Topic

BLOCK 1: SIMULACIÓN

TEMA 1. SIMULACIÓN DE PROCESOS. DIAGRAMAS DE FLUXO.
Simulacións por computador. Tipos de simuladores. Optimización.

TEMA 2. SIMULACIÓN SECUENCIAL MODULAR.
Descomposición de sistemas a gran escala. Algoritmos de particionamento. Descomposición de Redes Cíclicas Máximas.

TEMA 3. SIMULACIÓN ORIENTADA A ECUACIONES.
Método de factorización local (criterio de Markowitz). Reordenación "a priori" de matrices dispersas. Fase numérica.

TEMA 4. GRAOS DE LIBERDADE DUN DIAGRAMA DE FLUXO.
Graos de liberdade. Solución de ecuacións Sistemas de ecuacións non lineais. Selección das variables de deseño.

TEMA 5. PROPIEDADES FÍSICAS EN SIMULADORES DE PROCESOS QUÍMICOS.
Obtención e uso de propiedades físicas. Uso dos sistemas de cálculo de propiedades físicas.

TEMA 6. DESEÑO CONCEPTUAL DE PROCESOS.
Síntese xerárquica. Síntese baseada na programación matemática.
Exemplos de aplicación: Síntese de redes de cambiadores de calor (método de deseño "pinch"). Extensións do método de "pinch".

BLOQUE 2: OPTIMIZACIÓN

TEMA 7. OPTIMIZACIÓN DE PROCESOS QUÍMICOS.
Conceptos básicos sobre optimización. Optimización non liñal sin restriccións. Conceptos básicos da optimización non liñal con restriccións (igualdade e desigualdade).

TEMA 8. MÉTODOS NUMÉRICOS DE OPTIMIZACIÓN. OPTIMIZACIÓN SIN RESTRICCIÓN.
Optimización multivariable sen restriccións. Método de gradiente. Método de Newton. Métodos da secante.

TEMA 9. PROGRAMACIÓN LIÑAL (LP).
Definicións e teoremas básicos da programación liñal. Resolución do problema. O algoritmo Simplex. Programación cuadrática.

TEMA 10. MÉTODOS NUMÉRICOS PARA A OPTIMIZACIÓN DE PROBLEMAS NON LIÑAIS CON RESTRICCIÓN.
Métodos de penalización, barreira e Lagrangiana aumentada.
Programación cuadrática sucesiva. Método do gradiente reducido.

ESTUDO DE CASOS

Exemplos prácticos de aplicación en industrias químicas e de proceso, utilizando software de simulación e optimización de procesos.

Metodoloxía docente

Description
Actividades introductoriasPresentación e introducción ó uso dos programas de simulación e optimización: Matlab, Python-Cantera, COCO SIMULATOR, CHEMPSEP, DWSIM, HYSYS e ASPEN PLUS

Lección maxistral	Presentación verbal organizada de temas referidos ós contidos da asignatura, impartidos polo profesor con axudas visuais. Este método didáctico didáctico, implica a comunicación unidireccional do presentador activo ós estudiantes.
Aprendizaxe baseado en proxectos	Os estudiantes traballarán nun proxecto durante un período de tempo prolongado (o cuatrimestre) que os involucre na resolución dun problema do mundo real ou na resposta a unha pregunta complexa. Demostran os seus coñecementos e habilidades creando un produto público ou unha presentación para un público real.
Estudo de casos	Se plantexan escenarios baseados en situacíons nas que os alumnos observan, analizan, rexistran, implementan, conclúen, resumen ou recomendán. Os estudos de casos créanse e utilizázanse como ferramenta de análise e discusión.
Simulación	O alumno ten que preparar, e documentar, unha simulación que implique un proceso orixinal, a mellora de un proceso documentado ou a optimización dun proceso ou planta existente, así como crear unha presentación pública do seu traballo.
Prácticas con apoio das TIC	Se plantexarán simulacións de parte de procesos ou unidades de operación para resolver coas distintas ferramentas informáticas que se contemplan na materia (simuladores de proceso, linguaxes de programación, etc.).
Resolución de problemas de forma autónoma	Se plantexará a resolución de problemas de libros tradicionais da enxeñaría química que serán resoltos mediante as ferramentas propostas na materia, como alternativa ós métodos tradicionais de resolución.
Metodoloxías baseadas en investigación	O alumno deberá documentar o uso de sistemas de busca bibliográfica así como de datos de interese na web (fontes de información titoriais, etc.).

Atención personalizada

Methodologies	Description
Simulación	O alumno propondrá unha simulación de un proceso novo, mellora de un existente ou optimización de un proceso ou planta ou, no seu caso, debe adoptar o asignado polo profesor que titorará de xeito individualizado ou por grupo cada unha das simulacións da clase.
Aprendizaxe baseado en proxectos	O profesor propondrá pequenos proxectos que os alumnos han de resolver mediante as ferramentas que se lles indiquen na clase e entregar para a súa puntuación dacordo á rúbrica correspondente que será publicada na plataforma de e-learning. Cada alumno debe entregar o traballo realizado en clase ó finalizar a mesma. Os proxectos recibirán unha puntuación acorde á rúbrica que se publicará na plataforma de e-learning.
Estudo de casos	Se plantexan escenarios baseados en situacíons nas que os alumnos observan, analizan, rexistran, implementan, conclúen, resumen ou recomendán. Non haberá probas.
Prácticas con apoio das TIC	Na aula informática ou na aula de teoría se farán simulacións e resolución de problemas mediante ferramentas informáticas que han de ser entregados no memo día polos alumnos. Cualificación estará rubricada por rúbrica publicada na plataforma de e-learning.

Avaliación

	Description	Qualification	Training and Learning Results
Aprendizaxe baseado en proxectos	Se realizará durante todo o semestre e se entregará ó concluir as clases presenciais e antes do exame final. A cualificación estará rubricada por rúbrica publicada na plataforma de e-learning.	20	
Simulación	O alumno debe realizar e entregar unha simulación que contribúe á avaliación continua e que debe ser realizada de xeito tutelado durante todo o semestre. A cualificación estará rubricada por rúbrica publicada na plataforma de e-learning.	20	
Resolución de problemas de forma autónoma	Períódicamente o alumno debe entregar resoltos os problemas que se lle plantexan.	20	
Exame de preguntas de desenvolvemento	Corresponde ó exame final da asignatura que, no caso de renuncia á avaliación continua, será o total da nota. Está constituído por un ou varios casos, ou simulacións e a súa corrección stará asimismo rubricada.	40	

Other comments on the Evaluation

Alumnos con avaliación continua: A avaliación continua aplicarase na primeira convocatoria.

Para os alumnos con renuncia concedida oficialmente polo centro á avaliación continua o exame final valerá o 100%.

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) considerarase que o

alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no presente curso académico será de suspenso (0,0).

Resultados de Formación e Aprendizaxe

Code

A2	Que os estudantes saibam aplicar os seus coñecementos ó seu traballo ou vocación dunha forma profesional e posúan as competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de problemas dentro da súa área de estudo.
A3	Que os estudantes teñan a capacidade de reunir e interpretar datos relevantes (normalmente dentro da súa área de estudo) para emitir xuízos que inclúan unha reflexión sobre temas relevantes de índole social, científica ou ética.
A5	Que os estudantes desenvolvan aquelas habilidades de aprendizaxe necesarias para emprender estudos posteriores cun alto grao de autonomía.
B3	CG3 Coñecemento en materias básicas e tecnolóxicas que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacóns.
B7	CG7 Capacidade para analizar e valorar o impacto social e ambiental das solucións técnicas.
B10	CG10 Capacidade para traballar nun medio multilingüe e multidisciplinar.
D1	CT1 Análise e síntese.
D3	CT3 Comunicación oral e escrita de coñecementos.
D5	CT5 Xestión da información.
D7	CT7 Capacidad para organizar e planificar.
D8	CT8 Toma de decisións.
D10	CT10 Aprendizaxe e traballo autónomos.
D15	CT15 Obxectivación, identificación e organización.
D16	CT16 Razoamento crítico.
D17	CT17 Traballo en equipo.

Other comments on the Evaluation	
O alumno/a poderá escoller entre unha das dúas opcións, Opción A (Avaliación global) ou Opción *B (Avaliación continua), para a súa avaliação, segundo detállase a continuación. Opción A /*strong A esta Opción A poderá optar calquera alumno/a matriculado/a en a materia. A avaliação dos coñecementos adquiridos polo alumno/a farase de forma individual, e sen a utilización de ningún tipo de fonte de información, nun único exame escrito que englobará toda a materia recollida no Temario relativa á Aula, Laboratorio e Saídas de estudos ou Prácticas de campo, Contidos e Bibliografía indicados en *nbsp;&esta *guia docente. Os exames coincidirán coas convocatorias oficiais correspondentes. Para superar a materia, será necesario obter unha puntuación igual ou superior ao 50% da puntuación asignada, é dicir, cinco puntos sobre dez (5/10). Opción *B A esta Opción *B poderán optar só os/*as alumnos/*as que asistan e	

participen obrigatoriamente de forma *presencialmente en todos os exercicios e actividades que se propoñan na aula, para realizar tanto de forma individual e/ou en equipo, e que ademais asistan e participen en todas e cada unha das actividades de Laboratorio e Saídas de estudo ou Prácticas de campo propostas. Devanditos exercicios e actividades enmarcaranse en: Traballos tutelados individuais e/ou en equipo, avaliados a través dunha memoria escrita, cun peso total de 40%, é dicir, seis puntos sobre dez (4/10). Presentacións individuais e/ou en equipo en *Power *Point dos resultados dos traballos tutelados. Realizaranse dúas probas de Presentación, unha en equipo cun peso máximo de 30%, é dicir, tres puntos sobre dez (3/10), e unha Presentación individual cun peso máximo de 30%, é dicir, tres puntos sobre dez (3/10). Para superar a materia, é condición necesaria, pero non suficiente, obter como mínimo o 40% da nota máxima asignada a cada unha das partes: Traballos tutelados cun mínimo dun con seis puntos sobre dez (1,6/10); Presentación en equipo cun mínimo dun con dous puntos sobre dez (mínimo 1,2/10); Presentación individual cun mínimo dun con dous puntos sobre dez (mínimo 1,2/10) A materia estará superada cando a puntuación total (Traballos tutelados + Presentacións) resulte unha nota final mínima do 50%, é dicir, un mínimo de cinco puntos sobre dez (5/10). Naqueles casos nos que a pesar de non superar o 40% da nota máxima asignada dalgunha das partes (Traballos tutelados e/ou Presentacións), resulte unha nota igual ou maior a cinco puntos sobre dez (5/10), a nota final tradúcirse nun tres sobre dez (3/10), o que significará un suspenso. Dadas as competencias fixadas nesta materia, a Opción *B é a recomendada para a/a alumna/ou. As/vos alumnas/vos que queiran optar á Opción *B, ten que asistir a todas as Presentacións. E o incumprimento de calquera dos requisitos indicados na Opción *B empraça automaticamente á/a alumna/ou á Opción A. COMPROMISO ÉTICO: Espérase do alumno unha aptitude de comportamento adecuada ao lugar que lle corresponde en relación ao profesor, aos seus compañeiros e en base ás pautas de conduta, tanto *explicitas como implícitas de respeito, todo o cal se considerará tamén á hora de fixar a nota de avaliación para poder superar a materia. Representará un comportamento non ético: copiar, *plagiar, utilizar dispositivos electrónicos ou *telemáticos, ou métodos non explicitamente autorizados, entre outros. Nestas circunstancias indicadas considérase que a/a alumna/ou non reúne requisitos para superar esta materia, implicarao que a cualificación global neste curso académico é de suspenso (0.00).

Contents

Topic**UNIT 1: NUMBERS AND TRENDS****Skills**

- Writing, reading, and presenting facts and numbers correctly in a professional setting.
- Understanding symbols and abbreviations.
- Presenting data: Interpreting and describing graphs, charts, and diagrams.

Language

- Expressing numbers and calculations.
 - Expressing measurement and technical specifications.
 - Saying temperatures.
 - Saying dates, websites and email addresses.
 - Language for talking about trends.
 - Adjectives and adverbs.
 - Prepositions.
 - Describing timelines.
-

UNIT 2: DESIGN AND INNOVATION: DESCRIBING PRODUCTS AND TECHNOLOGIES**Skills**

- Describing uses, appearance, and definitions.
- Giving a short presentation: Structuring a presentation, exploring effective presentation strategies.

Language

- Language of description (e.g., It's really + adj./ It can + verb/ It looks like, it is shaped like /It is in the shape of …); defining relative clauses, reduced relative clauses.
 - Adjectives and qualities, order of adjectives.
 - Comparing and contrasting; superlative adjectives.
 - Nouns and adjectives connected with geometry and properties.
 - Reason and purpose
 - Conditionals.
 - Language for presenting: Key words and phrases for introducing, and concluding your presentation, signposting language for linking ideas; language for dealing with questions; persuasive language.
-

UNIT 3: GIVING INSTRUCTIONS AND DESCRIBING A MANUFACTURING PROCESS**Skills**

- Describing a process; explaining a process using a diagram; discussing the stages of production.
- Writing clear instructions and warnings.

Language

- The Passive Voice: present simple passive structures.
 - Verbs for manufacturing operations.
 - Imperatives for instructions and warnings.
 - Language for sequencing instructions and processes (sequence words).
 - Adverbials of time (once, while, before and after)
 - Prepositions.
-

4. INSPECTION AND QUALITY CONTROL: REPORT WRITING**Skills**

- Writing a short report: general guidelines (structure, format, and style).
- Writing a short report about a problem.

Language

- Possibility and Probability
 - Past simple and Present Perfect.
 - Time expressions.
-

5. JOB SEARCH: PREPARING FOR A JOB INTERVIEWSkills

- Identifying your personal strengths, key skills and experience.
- Writing a short CV.
- Talking about your CV.
- Writing a cover letter.
- Preparing a job interview: asking and answering interview questions.
- Learning strategies to build applicant's confidence.

Language

- Phrases for demonstrating personal strengths and weaknesses.
- Phrases to give details of your personal characteristics, qualifications, transferable skills, professional experience, etc.
- Action verbs; positive adjectives, positive expressions.
- Softening negative information and highlighting positive information.
- Avoiding spelling mistakes.
- Revision of past form of verbs, and prepositions.
- Useful language for opening, main body and closing cover letters.

Planning

	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	0	1
Lecturing	8	15	23
Autonomous problem solving	8	10	18
ICT supported practices (Repeated, Dont Use)	5	8	13
Mentored work	4	16	20
Problem and/or exercise solving	6	10	16
Objective questions exam	6	10	16
Essay	4	15	19
Oral exam	8	16	24

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Introductory activities	Activities directed at presenting the subject, taking contact with the students and gathering information in relation to their previous knowledges of the subject.
Lecturing	Explanation of the linguistic contents and its application (Use of English) in the learning process and the acquisition of the contained theoretical contents of the subject.
Autonomous problem solving	Activities focused on dealing with exercises related to the subject. Students develop the skills and the fulfillment of exercises related with the linguistic skills (Use of English) in Technical English and the communicative skills; especially the oral expression (Speaking).
ICT supported practices (Repeated, Dont Use)	The practice activities in connection to the four communicative skills: oral understanding (Listening), oral expression (Speaking), reading comprehension (Reading), and written expression (Writing), as well as the linguistic skill (Use of English) in Technical English. These activities are done individually or in group.
Mentored work	The analysis and resolution of practical exercises in relation to grammar and vocabulary combined with the communicative skills. Students autonomously perform tasks within and outside the classroom as homework; especially the communicative task of written expression (Writing).

Personalized assistance

Methodologies	Description
Introductory activities	General guidance to students on the subject concerning goals and how to achieve them. Exploring motivations and interests of the students. Indications on assignments and exercises to be done during the course, dates of assignment deliveries and the examination dates and how to achieve goals on the subject. Indicating that no tutorial will be done on the telephone or internet (electronic post, Skype, etc.). In case of any doubt, students will have to contact directly with the professor in the classroom or during tutorial hours.
Mentored work	Activities carried out in the classroom and during tutorials in order to supervise the learning process of the entrusted tasks and in relation to the communicative skill of written expression (Writing) and the linguistic skill (Use of English) in the English language.
Autonomous problem solving	This activity is directed to boost the realization of the diverse exercises related with the communicative skills and the linguistic skill in the application of the theoretical concepts of the language in practice. Detecting the difficulties in the learning process and lessening the different levels of the English language of each student with the rest of the participants in the course.

Lecturing The personalized attention in lecturing aims at the correct comprehension and the encouragement given to students in the classroom and during tutorials during the learning process of the theoretical concepts of the subject; as well as making indications on the practice of exercises to be carried out and giving advice about the performance so as to successfully achieve a pass in this subject.

Tests	Description
Oral exam	The aim of the personalized attention of the oral examination centers in the preparation, encouragement and the supervision of the oral expression (Speaking) in the classroom during the course and previous to the oral examination. The purpose of this activity is to encourage students to express not only with relevance and quality in relation to engineering and its specific vocabulary but also with linguistic correctness.

Assessment		Description	Qualification	Training and Learning Results
Problem and/or exercise solving	Evaluation of the theoretical concept of the Technical English language and its application. Performance of practical exercises in relation to the linguistic skill (Use of English).	20	B10	D4 D10 D18
Objective questions exam	Evaluations of communicative skill of oral understanding (Listening) with contents related to engineering (16%). Evaluations of the communicative skill of reading comprehension (Reading) with contents related to engineering (16%).	32	B10	D1 D10 D18
Essay	Evaluations of the communicative skill of the written expression (Writing).	16	B10	D1 D4 D7 D10 D18
Oral exam	Evaluations of the communicative skill of oral expression (Speaking) in relation to the linguistic skill and vocabulary in the field of engineering.	32	B10	D1 D4 D7 D10 D17 D18

Other comments on the Evaluation

Particular considerations

There are two assessment systems: continuous or final. The selection of a system excludes the other.

1.1. Continuous assessment

To qualify for the system of continuous evaluation, students are required to attend 80% of the total lecture hours with academic progress and participation. Students not reaching that percentage will lose this option. The assignments and tests done during the course will be worth 100 % of the final assessment for those students choosing the continuous evaluation. The non-completion of the assignments requested during the course will be counted as a zero (0.0). The assignments must be delivered or submitted by the deadlines and dates set in advance.

1.2. Final assessment (non-attendants)

Students choosing the final examination will have to take a final overall test that will take place on the official date established by the School of Industrial Engineering. To this end, students should consult the school's website, where the examination date and time are specified.

2. Subject's final grade

2.1. Continuous assessment

The final mark for this subject is calculated taking into consideration all the skills practised during the course. Therefore, each one of them is given the following weight in the final grade:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing: 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course through continuous assessment, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

To completely pass the course, students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the failed part(s) in an exam in July of the current academic year. If the course is not passed in the second call, students will have to resit the exam of the whole course in future calls, except for the next assessment call in September.

Continuous assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

2.2. Final Assessment (non-attendants)

The final assessment is calculated as follows:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

Regarding July's test, to completely pass the course, final assessment students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the exam of the whole course in future calls, including all the skills and linguistic contents of the subject.

Final assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

3. Additional considerations

3.1. During the examinations no dictionaries, notes or electronic devices (mobile phones, tablets, PCs, etc.) will be allowed.

3.2. It is students' responsibility to check all the resources in MooVi and/or their emails, as well as to be aware of examination or submission dates.

3.3. All the above-mentioned comments also pertain to Erasmus students. In the event of not being able to access MooVi, students must contact the professor to solve the problem.

3.4. Students are requested to have an adequate ethical behaviour. In case of detecting an unethical behaviour (coping, plagiarism, use of not authorized electronic devices, and others), it will be considered that the student does not meet the requirements to pass the subject. In this case, the overall grade in the current academic year will be a fail (0.0).

Recommendations

Other comments

We recommend students, who wish to take part in this course, to have a prior A1 level in English so as to reach the A2 level, according to the Common European Framework of Reference for Languages of the Council of Europe.

Requisites:

To register in this subject it is necessary to have passed or to be registered for all the subjects of the lower-division courses to the course where this subject is placed.

We also recommend continuous assessment due to the methodology used to practice and consolidate the learning process of the subject contents. Therefore, the active participation of students is essential to pass the Technical English subject requisites.

It is advisable to check the School's lectures timetable so as to avert imcompatibility of attendance with any other subject. Therefore students will not be permitted to sit for continuous evaluation if there is overlap.

In order to avoid damaging computers, students will not be allowed to take drinks or food into the classroom. If the ingestion of liquid or food is necessary, students must show an official medical prescription.

Contents

Topic

UNIT 1. Facts and figures: Presenting data	UNIT 1 Skills - Writing, reading, and presenting facts and figures in a professional setting. - Understanding symbols and abbreviations. - Describing dimensions and specifications; phrases related to length, width, thickness, etc. - Locating required information in a table of technical data.
UNIT 2. Professional Presentations: Presenting with Impact	Language focus - Expressing facts and figures (mathematical symbols, dates, amounts, internet symbols and abbreviations). - Phrases for approximating numbers; saying results. - Vocabulary for describing trends. - Prepositions.
UNIT 3. Technical Descriptions	UNIT 2 Skills - Delivering impactful presentations. - Structuring a presentation. - Illustrating the importance of body language and voice power to communicate your message clearly and persuasively. - Describing Trends. - Describing and referring to visual aids.

UNIT 1. Facts and figures: Presenting data	Language focus - Expressing facts and figures (mathematical symbols, dates, amounts, internet symbols and abbreviations). - Phrases for approximating numbers; saying results. - Vocabulary for describing trends. - Prepositions.
UNIT 2. Professional Presentations: Presenting with Impact	Language focus - Presentation language: Language for introducing your presentation; language for focusing and emphasizing key points; language for in recapping. - Using persuasive language to create impact. - Signposting language for linking the parts. - Cause-effect verbs. - Describing timelines: past simple, present perfect, etc.
UNIT 3. Technical Descriptions	UNIT 2 Skills - Understanding and describing process diagrams, phases and procedures. - Describing technical functions and applications and explaining how technology works - Describing specific materials; categorising materials and specifying and describing properties - Describing component shapes and features; explaining manufacturing techniques - Describing health and safety precautions and emphasising the importance of precautions.

UNIT 1. Facts and figures: Presenting data	Language focus - Expressing facts and figures (mathematical symbols, dates, amounts, internet symbols and abbreviations). - Phrases for approximating numbers; saying results. - Vocabulary for describing trends. - Prepositions.
UNIT 2. Professional Presentations: Presenting with Impact	Language focus - Presentation language: Language for introducing your presentation; language for focusing and emphasizing key points; language for in recapping. - Using persuasive language to create impact. - Signposting language for linking the parts. - Cause-effect verbs. - Describing timelines: past simple, present perfect, etc.
UNIT 3. Technical Descriptions	UNIT 2 Skills - Understanding and describing process diagrams, phases and procedures. - Describing technical functions and applications and explaining how technology works - Describing specific materials; categorising materials and specifying and describing properties - Describing component shapes and features; explaining manufacturing techniques - Describing health and safety precautions and emphasising the importance of precautions.

UNIT 1. Facts and figures: Presenting data	Language focus - Verbs for describing stages of a process. - The passive form: Present simple passive structures. - Time Connectors. - Verbs for describing movement; verbs and adjectives to describe advantages; adverbs for adding emphasis. - Cause-effect (lead to, result in, etc.) - Negative prefixes (in-, un-, dis-, etc.). - Relative clauses: Defining vs non-defining relative clauses; shortened relative clauses. - Mixed conditionals, first vs. second conditional. - Words for describing mechanisms, machining, properties of materials.
UNIT 2. Professional Presentations: Presenting with Impact	Language focus - Presentation language: Language for introducing your presentation; language for focusing and emphasizing key points; language for in recapping. - Using persuasive language to create impact. - Signposting language for linking the parts. - Cause-effect verbs. - Describing timelines: past simple, present perfect, etc.
UNIT 3. Technical Descriptions	UNIT 2 Skills - Understanding and describing process diagrams, phases and procedures. - Describing technical functions and applications and explaining how technology works - Describing specific materials; categorising materials and specifying and describing properties - Describing component shapes and features; explaining manufacturing techniques - Describing health and safety precautions and emphasising the importance of precautions.

UNIT 4. Applying for a Job

Skills

- Doing a self-evaluation of your strengths and weaknesses.
- Writing different types of CV.
- Becoming acquainted with cover and application letters.
- Preparing for job interviews.
- Demonstrating the best body language for job interviews.

Language focus

- Phrases for demonstrating strengths and weaknesses.
- Useful language for talking about yourself, and demonstrating your skills and experience.
- Action verbs; positive adjectives, positive expressions.
- Softening negatives and turning negatives into positives.
- Avoiding spelling mistakes.
- Phrases for opening and closing a letter of application.

UNIT 5. Writing Emails

Skills

- Writing short emails with appropriate formatting.
- Recognizing and producing formal and informal language in emails.
- Making your writing structured; writing effective openings and closings
- Handling style, tone and voice.

Language focus

- Common email expressions.
- Writing style.
- Creating a warm, professional tone.
- Avoiding spelling mistakes.

Lecturing	8	15	23
Problem and/or exercise solving	6	10	16
Essay	4	15	19
Objective questions exam	3	5	8
Oral exam	8	16	24
Objective questions exam	3	5	8

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Introductory activities	Activities aimed at presenting the subject, getting in touch with students and gathering information about their previous knowledge on the topic.
Mentored work	Analysis and resolution of practical exercises related to the grammatical and lexical contents, and to the communication skills. The students must develop these activities in an autonomous way, specially those homework activities concerning Writing skills.
Autonomous problem solving	Activities in which problems are presented and/or exercises related to the subject. The student must develop the analysis and resolution of problems and/or activities concerning the four communicative skills at an individual level, as well as the technical English linguistic skill (Use of English); specially those ones concerning Speaking.
ICT supported practices (Repeated, Dont Use)	Practice of the four communicative skills: listening, speaking, reading and writing, as well as the technical English linguistic skill (Use of English) at an individual or group level.
Lecturing	Explanation of linguistic contents and their application (Use of English) for the learning and acquisition of the theoretical contents of the subject.

Personalized assistance

Methodologies	Description

Introductory activities	The objective of the introductory activities is to provide general guidance on the subject; to promote learning strategies; to make general notes about the work and exercises, deadlines for the submission of work and the exam dates; and to give advice on how to pass the subject. It is important to know that no tutorials will be done on the telephone or internet (email, Skype, etc.). In case of any doubt or comment, students should contact directly with the professor in the classroom or during tutorial hours.
Autonomous problem solving	This activity seeks to help students with the practical exercises related to the communicative skills and the linguistic skills and their application for the learning and acquisition of the theoretical contents of the subject.
Mentored work	Practice of the different exercises in relation to the communicative skills and linguistic skills in order to apply English theoretical concepts.
Lecturing	The personalised attention for the master class is focused on the attention of students in the classroom and during tutorial hours. It focuses on the correct comprehension and promotion of the learning of the subject's theoretical concepts, as well as on providing guidance on work and practical exercises and on giving advice on how to pass the subject.

Tests	Description
Oral exam	The objective of the personalised attention of the oral exam is focused on the preparation, promotion and supervision of the oral expression (Speaking) in the classroom during the course and before the exam. This activity seeks to help the students not only to express themselves with relevance and appropriateness using the topics and vocabulary from the field of engineering, but also with linguistic correction.

Assessment		Description	Qualification	Training and Learning Results
Problem and/or exercise solving	Evaluation of theoretical concepts and their application. Resolution of practical exercises related to the linguistic skill (Use of English) of technical English.	20	B10	D7 D10 D18
Essay	Evaluation of the writing skill.	16	B10	D1 D4 D7 D9 D10 D18
Objective questions exam	Evaluation of the listening skill with engineering-related contents.	16	B10	D4 D9 D10 D18
Oral exam	Evaluation of the speaking skill with engineering-related vocabulary and topics.	32	B10	D1 D4 D7 D10 D17 D18
Objective questions exam	Evaluation of the reading skill with engineering-related topics and vocabulary.	16	B10	D1 D4 D7 D10 D17 D18

Other comments on the Evaluation

Particular considerations

There are two assessment systems: continuous or final. The selection of a system excludes the other.

1.1. Continuous assessment

To qualify for the system of continuous evaluation, students are required to attend 80% of the total lecture hours with academic progress and participation. Students not reaching that percentage will lose this option. The assignments and tests done during the course will be worth 100 % of the final assessment for those students choosing the continuous evaluation. The non-completion of the assignments requested during the course will be counted as a zero (0.0). The assignments must be delivered or submitted by the deadlines and dates set in advance.

1.2. Final assessment (non-attendants)

Students choosing the final examination will have to take a final overall test that will take place on the official date established by the School of Industrial Engineering. To this end, students should consult the school's website, where the examination date and time are specified.

2. Subject's final grade

2.1. Continuous assessment

The final mark for this subject is calculated taking into consideration all the skills practised during the course. Therefore, each one of them is given the following weight in the final grade:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing: 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course through continuous assessment, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

To completely pass the course, students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the failed part(s) in an exam in July of the current academic year. If the course is not passed in the second call, students will have to resit the exam of the whole course in future calls, except for the next assessment call in September.

Continuous assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

2.2. Final Assessment (non-attendants)

The final assessment is calculated as follows:

Listening: 16%

Speaking: 32%

Reading: 16%

Writing 16%

On the other hand, the practical exercises related to the grammatical and lexical contents and to the communicative skills, and the application of linguistic contents (Use of English) will have a weight of 20% of the mark obtained. Therefore, both parts (theory and practice) will add up to 100%, being 5 (five) the required mark to pass the subject.

To pass the course, it is necessary to obtain an average grade of 5 points with a minimum of 4 (out of 10) in each of the parts. If this is not the case, the final average grade of the subject will be truncated with a maximum grade of 4.5 (out of 10), even if the arithmetic average of the tests is higher.

Regarding July's test, to completely pass the course, final assessment students who obtained a mark below 4 in any of the parts on the first edition of records will have to resit the exam of the whole course in future calls, including all the skills and linguistic contents of the subject.

Final assessment will consider not only the relevance and appropriateness of the content of the answers, but also their linguistic correctness.

Partial or total plagiarism in any of the assignments or activities will result in an automatic fail of the subject. To claim ignorance of what plagiarism is, will not exempt students of their responsibility in this regard.

3. Additional considerations

- 3.1. During the examinations no dictionaries, notes or electronic devices (mobile phones, tablets, PCs, etc.) will be allowed.
- 3.2. It is students' responsibility to check all the resources in MooVi and/or their emails, as well as to be aware of examination or submission dates.
- 3.3. All the above-mentioned comments also pertain to Erasmus students. In the event of not being able to access MooVi, students must contact the professor to solve the problem.
- 3.4. Students are requested to have an adequate ethical behaviour. In case of detecting an unethical behaviour (coping, plagiarism, use of not authorized electronic devices, and others), it will be considered that the student does not meet the requirements to pass the subject. In this case, the overall grade in the current academic year will be a fail (0.0).

Recommendations

Other comments

We recommend students to have some knowledge of English. This course will start from an A2 level and it will reach B1 level, according to the European Framework of Reference for Languages of the Council of Europe.

Requisites:

To register in this subject, it is necessary to have passed or to be registered for all the subjects of the lower courses.

We also recommend continuous assessment due to the methodology used to practise and consolidate the contents of the subject. Therefore, the active participation of students is essential to pass the Technical English subject.

It is advisable to check and compare this subject's timetable with the School's lectures timetables so as to avoid incompatibilities. Students will not be allowed to choose continuous assessment if there is an overlap with other subjects.

In order to avoid damaging the room's computer equipment, students will not be allowed to take drinks or food into the classroom. If the ingestion of liquids or food is due to medical reasons, students must show an official medical prescription.

Sending emails or using of mobile phones during the lessons are prohibited.

The student who does not comply with the information in the previous paragraph will also lose the opportunity to follow the continuous assessment process.

IDENTIFYING DATA

Methodology for the preparation, presentation and management of technical projects

Subject	Methodology for the preparation, presentation and management of technical projects			
Code	V12G350V01905			
Study programme	Grado en Ingeniería en Química Industrial			
Descriptors	ECTS Credits 6	Choose Optional	Year 4th	Quadmester 2nd
Teaching language	Spanish Galician English			
Department				
Coordinator	Alonso Rodríguez, José Antonio			
Lecturers	Alonso Rodríguez, José Antonio González Cespón, José Luis Seoane González, Pablo			
E-mail	jaalonso@uvigo.es			
Web	http://moovi.uvigo.gal/			
General description	The aim of this course is to prepare the students to handle the methods, techniques and tools that are needed for the elaboration and management of technical documents in the industrial field of Engineering. It will also be sought to develop skills in the handling of information and communication technologies related to the professional field of the student's degree. Furthermore, the student skills to communicate properly the knowledge, procedures and results in the Industrial Engineering field will be strengthened. An essentially practical approach will be used, based in the solution of specific application exercises -with guidance of the subject's lecturer- that will require to apply the theoretical contents of the course.			

Training and Learning Results

Code	
B3	CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
C18	CE18 Knowledge and skills to organize and manage projects. Know the organizational structure and functions of a project office.
D2	CT2 Problems resolution.
D3	CT3 Oral and written proficiency.
D5	CT5 Information Management.
D6	CT6 Application of computer science in the field of study.
D7	CT7 Ability to organize and plan.
D8	CT8 Decision making.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D11	CT11 Ability to understand the meaning and application of the gender perspective in the different fields of knowledge and in professional practice with the aim of achieving a more just and equal society
D13	CT13 Ability to communicate orally and in writing in the Galician language.
D14	CT14 Creativity.
D15	CT15 Objectification, identification and organization.
D17	CT17 Working as a team.
D18	CT18 Working in an international context.
D20	CT20 Ability to communicate with people not expert in the field.

Other comments

Previously to the realisation of the final assessments, students should check in the FAITIC platform to know whether it is necessary for them to carry any particular documentation, materials, etc. into the exam room to perform the tests.

It is necessary that the student registered in this course, either has passed all courses of the former years, or is registered in the courses he's not passed yet.

Other comments on the Evaluation

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) considérase que o

alumno non reúne os requisitos necesarios para superar a materia. Neste caso a cualificación global no presente curso académico será de suspenso (0.0).

A avaliación nesta materia ten un compoñente moi alto de avaliación continua durante a realización das diferentes actividades académicas desenvolvidas durante o curso. No caso de convocatorias diferentes da convocatoria de maio, a avaliación realizarase no laboratorio, mediante o desenvolvemento práctico dunha aplicación similar ás desenvolvidas durante o curso.

Resolución de problemas e/ou exercicios	A finalidade de esta proba de desenvolvemento, que terá lugar na semana previa a semana de exames da Escola, é a resolución dun caso práctico que deberán resolver os alumnos de modo que se aplique de maneira práctica os coñecementos adquiridos	30	

Other comments on the Evaluation

Con respecto ao exame de XULLO (2ª convocatoria), se manterá a cualificación obtida polo alumno nos controis e presentacións / exposicións realizados durante o período docente. Iso significa que o alumno únicamente realizará próbaa tipo test do devandito exame. Cando a Escola libere a un alumno do proceso de avaliación continua, a súa cualificación será o 100% da nota obtida en próbaa tipo test anteriormente citada. Compromiso éticoEspérase que o alumno

presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, por exemplo), considerarase que *el alumno non reúne os requisitos necesarios para superar a materia.

General description	(*)Introduction to laser technology and its applications for undergraduate students of the industrial field.		

Training and Learning Results

Code		
B10	CG10 Ability to work in a multidisciplinary and multilingual environment.	
D10	CT10 Self learning and work.	

Expected results from this subject

Expected results from this subject	Training and Learning Results
- Know the physical principles in which it bases the operation of a laser and his parts.	B10 D10
- Know the main properties of a laser and relate them with the potential applications.	
- Know the different types of lasers differentiating his specific characteristics.	
- Know the main applications of the technology laser in the industry.	

Contents

Topic	
Chapter 1.- INTRODUCTION	1. Electromagnetic waves in the vacuum and in the matter. 2. Laser radiation. 3. Properties of the laser radiation.
Chapter 2.- BASICS	1. Photons and energy level diagrams. 2. Spontaneous emission of electromagnetic radiation. 3. Population inversion. 4. Stimulated emission. 5. Amplification.
Chapter 3. COMPONENTS OF A LASER	1. Active medium 2. Excitation mechanisms. 3. Feedback mechanisms. 4. Optical cavity. 5. Exit device.
Chapter 4. TYPES OF LASER	1. Gas lasers 2. Solid-state lasers 3. Diode lasers. 4. Other lasers.
Chapter 5. OPTICAL COMPONENTS AND SYSTEMS	1. Spherical lenses. 2. optical centre of a lens. 3. Thin lenses. Ray tracing. 4. Thin lenses coupling. 5. Mirrors. 6. Filters. 7. Optical fibers.
Chapter 6. INDUSTRIAL APPLICATIONS	1. Introduction to laser materials processing 2. Introduction to laser cutting and drilling. 3. Introduction to laser welding. 4. Introduction to laser marking. 5. Introduction to laser surface treatments.

Planning	Class hours	Hours outside the classroom	Total hours
Laboratory practical	18	30.6	48.6
Lecturing	32.5	65	97.5
Essay questions exam	1.7	0	1.7
Report of practices, practicum and external practices	1.9	0	1.9
Problem and/or exercise solving	0.3	0	0.3

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	Description
Laboratory practical	Activities of application of the knowledge to specific situations and of acquisition of basic and practical skills related to the matter object of study. They will be developed in the laboratories of industrial applications of the lasers of the EEI.
Lecturing	Exhibition on the part of the teacher of the contents on the matter object of study. Exhibition of real cases of application of the laser technology in the industry.

Personalized assistance

Methodologies	Description
Laboratory practical	

Assessment	Description	Qualification	Training and Learning Results
Essay questions exam	Several tests consisting of development questions will be proposed, so that no test exceeds 40% of the overall grade for the subject..	70	B10 D10
Report of practices, practicum and external practices	The evaluation of the laboratory practices will be carried out by means of the qualification of the corresponding practice reports.	20	B10 D10
Problem and/or exercise solving	During the course there will be carried out a test of follow-up of the subject that will consist of two questions of equal value.	10	B10 D10

Other comments on the Evaluation

If some student was resigning officially the continuous assessment, the final note would be calculated by the following formula: (0.8 x Exam qualification) + (0.2 x Practices qualification). It is mandatory to carry out the laboratory practices in order to pass the subject. It is mandatory to attend 75% of the theory lessons to pass the subject. Ethical commitment: it is expected an adequate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0). The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Other comments on the Evaluation

Alumnos con avaliación continua:

-Aqueles alumnos que obteñan polo menos o 50% da nota da proba práctica que se realizará cara a mediados do cuatrimestre (semana de o 19 a o 23 de novembro de 2018) poden optar por liberar esa materia no exame final.

-Para poder presentar as memorias dos estudos de casos propostos é necesario asistir polo menos a o 80% das clases prácticas. En caso de non asistir polo menos a o 80 % das clases prácticas a nota desta parte será de 0,0.

-En a segunda convocatoria consérvase a nota de a avaliación continua.

Alumnos con renuncia oficial a a avaliación continua:

-Para aqueles alumnos con renuncia a avaliación continua concedida oficialmente polo centro o exame final incluirá unha parte específica dos casos prácticos e valerá o 100% da nota.

Compromiso ético:

Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plagio, utilización de aparellos electrónicos non autorizados, e outros) considerarase que o alumno non reúne os requisitos necesarios para superar a materia. En este caso a cualificación global no presente curso académico será acorde a normativa vigente

Practices through ICT	The professor will attend the doubts of the students so much in the computer classroom as in the schedule of tutorial.
Mentored work	The professor will attend the doubts of the students so much in the classroom as in the schedule of tutorial.

Assessment

	Description	Qualification	Training and Learning Results
Lecturing	Classical master explanation on whiteboard supported by presentation on transparencies, videos and any material that the teacher considers useful to make the syllabus of the subject.	15	B4 D2 B5 D9 B6 D10 B7
Problem solving	Realization of applied laboratory practices	25	B4 D2 B5 D9 B6 D10 B7
Mentored work	Preparation of a memory and presentation of the work proposed, individually or in group, on the thematic proposal to the start of course.	20	B4 D7 B5 D9 B6 D10 B7 D17 B11 D20
Objective questions exam	Objective proof (1) consisting of short questions or multiple choice to know the progressive evolution of the students during the development of the matter.	20	B4 D7 B5 D9 B6 B7 B11
Objective questions exam	Objective proof (2) consisting of short questions or multiple choice to know the progressive evolution of the students during the development of the matter.	20	B4 D7 B5 D9 B6 B7 B11

Other comments on the Evaluation

The final examination will be composed by a theory part (15%) and a problem part (25%) and it will be mandatory to obtain a minimum mark of 3,5 out of 10 between both tests. The continuous evaluation (EC) will be evaluated by the work (W) and by 2 objective tests (PO); those who have officially renounced the EC will have had to take a specific questionnaire (CE) at the first opportunity of the course announcement.

The continuous evaluation (EC, 40%) will be evaluated through the work and of objective proofs; those that have renounced officially to the EC will have to make a specific questionnaire (SQ) at the earliest opportunity of the course call. In the second opportunity (July call), the students that have made the EC will be able to choose between keeping the EC mark or make the SQ of the second opportunity.

The End of Degree call will be fully evaluated by means of an exam (100%), that is, the EC of the previous course will not be taken into account.

A numerical rating system of 0 to 10 points will be used according to current legislation (RD 1125/2003, September 5, BOE September 18).

It is expected an adequate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

General description	A materia de Deseño de Plantas Químicas e de Proceso ten como visión e como misión proporcionar ao futuro Graduado en Enxeñaría en Química Industrial os coñecementos, capacidades e habilidades que lle permitan deseñar, avaliar e implantar plantas de procesado no ámbito da enxeñaría química.			
	É unha materia de natureza interdisciplinar porque require de coñecementos previos sobre procesos e tecnoloxías de transformación de produtos, construcións e instalacións industriais; así como sobre metodoloxías de elaboración, organización e xestión de proxectos, entre outros.			
	O estudo da materia é unha ferramenta fundamental para afianzar os coñecementos adquiridos polo alumnado durante o estudo da carreira, desde os aspectos fundamentais de química física, matemáticas, expresión gráfica, nos cales descansan as aplicacións de enxeñaría química, ata a *implementación dos mesmos na elaboración de proxectos de procesos e plantas de proceso.			
	Para logralo emprégase un enfoque amplio dos contidos da materia, buscando a integración dos coñecementos adquiridos ao longo da carreira, mediante a *implementación de metodoloxías de aprendizaxe activas para que os contidos expostos en clases teóricas aplíquense no desenvolvemento das actividades prácticas, orientadas á realidade industrial da profesión, asimilando o emprego ágil e preciso da distinta normativa de aplicación e das boas prácticas profesionais establecidas, apoíándose nas novas tecnoloxías para documentar, elaborar, xestionar o deseño de procesos e plantas de proceso no ámbito profesional da enxeñaría química.			

Resultados de Formación e Aprendizaxe

Code

B1	CG1 Capacidad para a redacción, sinatura e desenvolvemento de proxectos no ámbito da enxeñaría industrial, que teñan por obxecto, segundo a especialidade, a construcción, reforma, reparación, conservación, demolición, fabricación, instalación, montaxe ou explotación de: estruturas, equipos mecánicos, instalacións enerxéticas, instalacións eléctricas e electrónicas, instalacións e plantas industriais, e procesos de fabricación e automatización.
B3	CG3 Coñecemento en materias básicas e tecnolóxicas que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacions.
B4	CG4 Capacidad para resolver problemas con iniciativa, toma de decisións, creatividade, razonamento crítico e capacidade para comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial na mención de Química Industrial.
B5	CG5 Coñecementos para a realización de medicións, cálculos, valoracións, taxacións, peritaxes, estudios, informes, planes de labores e outros traballos análogos.
B6	CG6 Capacidad para o manexo de especificacións, regulamentos e normas de obrigado cumprimento.
C18	CE18 Coñecementos e capacidades para organizar e xestionar proxectos. Coñecer a estrutura organizativa e as funcións dunha oficina de proxectos.
D2	CT2 Resolución de problemas.
D7	CT7 Capacidad para organizar e planificar.
D8	CT8 Toma de decisións.
D10	CT10 Aprendizaxe e traballo autónomos.
D14	CT14 Creatividade.
D17	CT17 Traballo en equipo.
D20	CT20 Capacidad para comunicarse con persoas non expertas na materia.

Resultados previstos na materia

Expected results from this subject

Training and Learning Results

Comprender os aspectos básicos de formulación xeral que supón a implantación dun proceso.	B1 B3	
Coñecer e interpretar a diferente normativa de obrigado cumprimento existente referente á actividad.	B6	D8 D20
Desenvolver documentos que expresen a idea de deseño concibida	B1 B4 B5	D2 D7 D8 D14 D17
Habilidade para o traballo en grupo con obxectivos.	B4	D8 D14 D17
Adquirir habilidades para xestionar a información relativa ás plantas de proceso	B4 B6	D2 D7 D8 D10 D14 D17 D20
Capacidade para o deseño de instalacións e sistemas auxiliares na industria química e de proceso.	B1 B4 B5 B6	C18 D2 D7 D8 D10 D14 D17 D20

Contidos

Topic

Introducción e presentación da materia.	Presentación. Guía docente da materia. Criterios e normas para o desenvolvemento da materia.
Instalacións de iluminación	Luz: concepto, onda electromagnética, resonancia. Percepción da luz. Fisiología do ollo. Absorción e reflexión. Xeración da cor: RGB e CMYK. Unidades luminosas: lumen e lux. Iluminación. Curvas fotométricas. Niveis de luz. UNE 12464. Calculo do numero de fontes e luminarias. Aplicacións de cálculo: DIALUX ou INDALUX. Eficiencia energética.
Instalacións eléctricas	Repasso de conceptos básicos: intensidade, impedancia e voltaje. Tensión monofásica e trifásica. Diferenzas e aplicación. Conexións de fornezo. Elementos dunha instalación eléctrica. Protección magnetotérmica e diferencial. Neutro e toma de terra. Automatización de instalacións, Contactores. Accionamiento por lóxica eléctrica ou microcontrolador. Deseño dunha instalación eléctrica. Dimensionamiento. Línea de forza e línea de alumado. Reglamento Electrotécnico de Baixa Tensión.
Ventilación	Ventilación Conceptos de ventilación. Calidade de aire. Efecto invernadero. Humidade do aire. Sicrometría. Conductos de aire. Versión consolidada do Real Decreto 1027/2007.
Fontanería e saneamiento	A auga. Caudales de auga e presións. Compoñentes dunha instalación. Tuberías de distribución. Montaxes. Auga quente. Tuberías de evacuación. Probas reglamentarias.
Ruído industrial	Ruído industrial Concepto de ruído. Ondas. Parámetros. Presión e potencia acústica, dB e dBA. Fisiología do oído. Reverberación. Tempo de reverberación T60 e T30. Absorción. Coeficiente de absorción e materiais. Lei de Sabine. Absorción en grandes volumes. Illamento. Concepto de enerxía. Lei de masas. Frecuencias de coincidencia e resonancia. Curvas de illamento. Control do ruído nunha industria. Propagación do son fonte-transmisión-recepción. Enfermidades laborais e relación cos medicamentos. Equipos de protección individual.
Reglamento APQ	Real Decreto 656/2017
Aire comprimido	Aire. Parámetros do aire. Equipos de compresión. Real Decreto 2060/2008

Metodoloxía docente

	Description
Actividades introductorias	Presentáse a materia, información dos contidos da mesma, metodoloxías que se van a aplicar, traballos a realizar na asignatura e forma de avaliación. Así mesmo realizásen dinámicas na clase para fomentar a interrelación no alumnado.
Lección maxistral	Clase maxistral participativa onde se exponen os obxectivos e os principais contidos do temario e poranxe a disposición dos alumnos todos aqueles materiais necesarios para o desenvolvemento das actividades prácticas programadas.
Resolución de problemas	O alumno debe desenvolver as soluciones axeitadas ou correctas a os exercicios plantexados que se basean na teoría impartida. Realizásen aplicando fórmulas, algoritmos ou procedementos de transformación dánda información dispoñible. Será necesaria a interpretación dos resultados.
Aprendizaxe baseado en proxectos	Realizáse un traballo aplicando a metodoloxía de "Aprendizaxe Baseada en Proxectos- ABP". Realización dun proxecto de ingeniería, traballando cun equipo aberto. Farase fincapé na aplicación de ferramentas e coñecementos de ingeniería industrial para crear soluciones de ingeniería para as necesidades reais dunha industria.

Atención personalizada

Methodologies	Description
Aprendizaxe baseado en proxectos	O estudiante realizará un proxecto de enxeñería, traballando cun equipo aberto. Farase fincapé na aplicación de ferramentas e coñecementos de enxeñería industrial para crear soluciones de ingeniería para as necesidades reais dunha industria. Faranse titorías de grupo co profesor para aclarar dúbihdas e para o seguimiento do traballo.

Traballo	Determinación del nivel de ruido de una instalación	22 B1 B3 B4 B5 B6	D2 D7 D8 D10 D14 D17 D20

Other comments on the Evaluation

SISTEMA DE AVALIACIÓN:

O sistema de avaliação por defecto é o sistema de avaliação continua. O alumno que desexa aproveitar un sistema de avaliação non continuado deberá solicitalo oficialmente, no tempo e na forma establecidos para iso na E.E.I. Se o estudiante non solicita u obtén o veredicto favorable da renuncia á avaliação continua, enténdese que está no sistema de avaliação continua.

O alumno que pretende solicitar a exención de avaliação continua deberá notificarlle o profesor o máis axiña posible. Recoméndase facelo ao comezo do curso ou antes de comezar o ensino.

A avaliação levarase a cabo en función das rúbricas publicadas na plataforma TEMA da materia.

CRITERIOS DE SUPERACIÓN DA MATERIA mediante avaliação continua:

Para aprobar o alumno pola avaliação continua debe satisfacer simultaneamente dúas condicións:

- a) obter unha puntuación mínima de 4 das 10 en cada unha das seccións available ou partes sinaladas.
- b) obter unha puntuación media, ponderada segundo as porcentaxes indicadas anteriormente, cun mínimo de 5 a 10.

Se unha sección é suspendida, ou o estudiante desexa mellorar o grao dunha sección, ter un máximo de dous (2) oportunidades para facelo. Neste caso, aplicarase un coeficiente corrector á cualificación da sección. O prazo para tales correccións será establecido polo profesor.

CRITERIOS DE SUPERACIÓN DA MATERIA mediante avaliação continua:

Os alumnos que opten por renunciar oficialmente á avaliação continua deberán realizar un traballo supervisado polo profesor, consistente nun proxecto industrial ou similar, e unha proba de avaliação. Para obter a cualificación atoparase a media proporcional (teoría do 60% e prácticas do 40%). E é obrigatorio obter unha nota mínima de 4 puntos sobre 10 posibles en cada unha das partes. Para superar a materia, a media mencionada debe ser como mínimo de 5 puntos sobre 10 posibles.

Compromiso ético:

Espérase que o alumno presente un comportamento ético axeitado. No caso de detectar un comportamento non ético (copia, plaxio, utilización de aparatos electrónicos non autorizados, etc.) considerarase que o alumno non reúne os requisitos necesarios para superar a materia. Nese caso a cualificación global no presente curso académico será de suspenso (0.0 puntos).

Non se permitirá a utilización de ningún dispositivo electrónico durante as probas de avaliación, salvo autorización expresa. O feito de introducir un dispositivo electrónico non autorizado na aula de exame será considerado motivo de non superación da materia no presente curso académico e a cualificación global será de suspenso (0.0 puntos).

General description	<p>The use of microorganisms for the transformation of raw materials has been carried out by humans since antiquity, although it is more recent (2nd half of 20th century) the use of biocatalysts (microorganisms, enzymes or other biological systems) in industrial processes. The biotechnology industry can be considered an emerging sector of high economic profitability, which makes it necessary to have the scientific and technological knowledge that allow developing and adapting bioprocesses in the different sectors of application.</p> <p>The subject aims to provide students with a global view on the use of biocatalysts (microorganisms, cells or biomolecules) for the development of biotechnological industrial processes as an alternative to traditional processes. The main unit operations involved in this type of process will be studied, as well as the specific aspects that differentiate them from conventional industrial chemical processes. Given that it is a field in continuous expansion, reference will be made to the most recent advances and trends.</p>			
English Friendly subject: International students may request from the teachers: a) resources and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.

Problem and/or exercise solving	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Case studies	Processes of interest will be selected, which are representative of the current trends in the biotechnology sector, and a critical analysis will be carried out, in groups or individually. Short presentations will be made in the classroom, encouraging debate, as much as possible.
Laboratory practical	Laboratory experiments and field practices in companies related to the processes treated throughout the course will be carried out. The students will have the support material necessary for a proper understanding of the experiments to be carried out. A brief final report will be prepared in which the main results and conclusions should be collected.
Presentation	The students will make brief presentations of the cases studied in the classroom, as well as the supervised work. A question time will be included, in which the questions posed must be answered.
Lecturing	The lecturer will present the general aspects of the program in a structured way, with special emphasis on the fundamentals and most important or difficult to understand aspects. The lecturer will provide, through the Tem@ platform, the necessary material for a correct follow-up of the subject. The student will be able to work previously the material handed out by the lecturer and consult the recommended bibliography to complete the information.
Mentored work	The students will develop a small project on a subject assigned by the lecturer. The work will be carried out in groups, that will deliver a written essay and make a presentation.
Seminars	Proposal and resolution of practical cases related to the subject matter. Complementary activity to the case study.

Personalized assistance

Methodologies	Description
Lecturing	Academic activity carried out by the lecturer during tutoring hours where students, individually or in small groups, can ask questions about the subject, and receive guidance and additional support. This activity can also be carried out in a remote way (through email or virtual campus).

Laboratory practical	Academic activity carried out by the lecturer during tutoring hours where students, individually or in small groups, can ask questions about the subject, and receive guidance and additional support. This activity can also be carried out in a remote way (through email or virtual campus).
Seminars	Academic activity carried out by the lecturer during tutoring hours where students, individually or in small groups, can ask questions about the subject, and receive guidance and additional support. This activity can also be carried out in a remote way (through email or virtual campus).
Mentored work	Academic activity carried out by the lecturer during tutoring hours where students, individually or in small groups, can ask questions about the subject, and receive guidance and additional support. This activity can also be carried out in a remote way (through email or virtual campus).
Case studies	Academic activity carried out by the lecturer during tutoring hours where students, individually or in small groups, can ask questions about the subject, and receive guidance and additional support. This activity can also be carried out in a remote way (through email or virtual campus).
Presentation	Academic activity carried out by the lecturer during tutoring hours where students, individually or in small groups, can ask questions about the subject, and receive guidance and additional support. This activity can also be carried out in a remote way (through email or virtual campus).

Assessment

	Description	Qualification	Training and Learning Results		
Case studies	The work done during the seminars, case studies and practical classes will be evaluated based on: - assistance - attitude and participation of the students during the sessions - quality of submitted reports	20	B3	C16	D1
			B4	C19	D2
					D3
					D9
					D10
					D16
					D17
Presentation	The students will make a presentation of the supervised work, which will be assessed based on its clarity, rigor and demonstration of the knowledge acquired on the subject.	10			D1
					D3
					D16
					D17
Mentored work	The report presented on the assigned work subject will be evaluated. This report must include some minimum aspects, based on a guide that will be provided to the students.	10	B3	C16	D1
			B4	C19	D2
					D3
					D9
					D10
					D16
					D17
Essay questions exam	Written tests will be carried out, which will include essay questions, for the evaluation of the acquired competences in relation to the contents of the course.	30	B3	C16	D1
			B4	C19	D2
					D3
					D9
Problem and/or exercise solving	Written tests will be carried out, which will include short questions or exercises and problems, for the evaluation of the acquired competences in relation to the contents of the course.	30	B3	C16	D1
			B4	C19	D2
					D3
					D9

Other comments on the Evaluation

1. Considerations on continuous evaluation.

- The participation of the student in any of the acts of evaluation of the course will imply the condition of presented and, therefore, the assignment of a qualification.
- Attendance at a minimum of 80% of practical classes (laboratory, industry visits, seminars) is mandatory, which cannot be recovered.
- To pass the course, students must obtain at least a score of 5 points out of 10 in the partial exam and in the final exam, and a minimum of 4 points out of 10 in each of the other evaluation sections (practical classes, project). In any case, the overall qualification required to pass the course, resulting from the weighted sum of all the evaluation sections, will be 5 points out of 10.
- Students may waive the continuous assessment system through the procedure and within the period established by the School. If such resignation is requested and authorized, 100% of the grade will be assigned by taking a final exam, in which questions can be asked about all the topics taught in the course, including those corresponding to

practical classes.

2. Considerations about the exams (partial and final).

- **Partial exam.** During the course there will be a partial and eliminatory test, which will include problems and/or exercises, as well as essay questions, and which will have a weight in the overall grade of 30 %. To pass this test, a score of at least 5 points out of 10 must be obtained.
- **Final exam 1st opportunity.** It will include the contents not evaluated in the partial test, and will have a relative weight of 30 % in the overall grade of the course. In case of not having passed the partial test, the students will be given the opportunity to repeat the evaluation of the corresponding contents, on the same date assigned for the final exam.
- **Final exam 2nd opportunity.** The exam may put forward questions about all the subjects taught in the course, including those corresponding to practical classes. Students who have obtained the minimum qualification established in this guide for the various evaluation sections (practical classes, project, partial exam), may only be assessed for the rest of the content.

3. Considerations on the qualification records

- **1st opportunity qualification record.** The global mark will be the weighted sum of those obtained in all the assessments carried out (practical classes, project, partial exam and final exam), provided that the minimum required grades have been passed (4 points out of 10 in practical classes and project, 5 points out of 10 in partial and final exams). In case of failing or not showing up for the partial and/or final exam, the record will reflect the Fail rating, with a numerical value resulting from the weighted sum of the practical classes and project grades, applying the global grade contribution percentages specified in this guide; the contents approved in these two sections will be considered as passed with a view to the 2nd opportunity qualification record.
- **2nd opportunity qualification record.** The global mark will be the weighted sum of those obtained in all the assessments carried out, provided that the minimum required marks have been passed. In case of failing or not taking the final exam, the record will reflect the Fail grade, with a numerical value resulting from the weighted sum of the practical classes and project grades, applying the global grade contribution percentages specified in this guide.

4. Ethical considerations

The student is expected to exhibit an adequate ethical behavior. In case of detecting unethical behavior (copying, plagiarism, use of unauthorized electronic devices, and others), it will be considered that the student does not meet the necessary requirements to pass the subject. In this case, the overall grade in the current academic year will be Fail (0.0).

The use of any electronic device during the evaluation tests will not be allowed unless expressly authorized. The introduction of a non-authorized electronic device in the exam room will be considered a reason for not passing the subject in this academic year and the overall rating will be Fail (0.0)

Teaching language	#EnglishFriendly Spanish			
Department				
Coordinator	Longo González, María Asunción			
Lecturers	Longo González, María Asunción Moure Varela, Andrés			
E-mail	mlongo@uvigo.es			
Web				
General description	In this course, the fundamental aspects related to the structure of organic compounds and their reactions are presented. Particular attention will be paid to polymerization methods and techniques, and to the intermediate chemicals most frequently used on an industrial scale, as well as other sectors of interest in the organic chemical industry.			
	English Friendly subject: International students may request from the teachers: a) resources and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

Training and Learning Results

Code

B3	CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
B4	CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and the ability to communicate and transmit knowledge and skills in the field of industrial engineering specializing in Industrial Chemistry.
C4	CE4 Ability to understand and apply the basic knowledge of general chemistry, organic chemistry and inorganic chemistry, and their applications in engineering.
D2	CT2 Problems resolution.
D9	CT9 Apply knowledge.
D10	CT10 Self learning and work.
D16	CT16 Critical thinking.
D17	CT17 Working as a team.

Contents

Topic

1. The organic chemical industry.	1.1. Introduction and general characteristics. 1.2. Raw materials 1.3. Petrochemistry 1.4. Intermediate products and final products.
-----------------------------------	---

2. Fundamental concepts of organic chemistry.	2.1. Bonds, hybridisation and geometry. 2.2. Hydrocarbons. Aromaticity. Resonant structures. 2.3. Functional groups. 2.4. Intermolecular interactions 2.5. Conformations and isometry.
3. Reactivity of organic compounds.	3.1. Kinetics and mechanisms of reaction. 3.2. Homogeneous and heterogeneous catalysis. 3.3. Reactivity of organic compounds. 3.3.1. Reactivity of substrates 3.3.2. Electronic structure of reagents. 3.3.3. Reaction intermediates 3.4. Types of organic reactions.
4. Ethylene. Propylene. Intermediate and end-products. Polymerisation.	4.1. Addition reactions. 4.2. Industrial products from ethylene. 4.3. Industrial products from propylene. 4.4. Polymeric materials. Classifications. 4.4.1. Polymerisation reactions. Additions and condensations. 4.4.2. Polyethylene and polypropylene.
5. Fraction C4. Dienes and polyenes. Intermediate and end-products. Fibres and elastomers.	5.1. Butenes. 5.2. Dienes, types and characteristics. 5.3. Synthesis of Diels Alder. 5.4. Elastomers. 5.4.1. Isoprene rubbers. 5.4.2. Isobutylene rubbers. 5.4.3. 1,3-butadiene rubbers. 5.5. Fibres 5.5.1. Acrylic, polyamides and polyesters.
6. Fraction BTX. Intermediate and end-products. Resins.	6.1. Reactivity of the arenes. Benceno. 6.2. Effect of substituents. Activators and deactivators. 6.3. Industrial derivatives of toluene. 6.3.1. Production of phenol and its derivatives. Phenolic and epoxi resins 6.3.2. Polyesters. Styrene polymers.
7. Other organic compounds of industrial interest.	7.1. Nitrogen compounds. 7.1.1. Dyazonium salts . Dyes and pigments. 7.2. Halogenated compounds. Solvents and insecticides. 7.3. Oxogene compound. Organic acids, alcohols and ketones of industrial interest. 7.4. Tensoactive agents. Types and characteristics.

Planning	Class hours	Hours outside the classroom	Total hours
Problem solving	9	27.5	36.5
Laboratory practical	18	18	36
Mentored work	1.5	14	15.5
Lecturing	16	40	56
Problem and/or exercise solving	2	0	2
Presentation	2	0	2
Objective questions exam	2	0	2

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	Description
Problem solving	Throughout the course, exercises will be solved, either in the classroom or autonomously by the students, and handed out for evaluation if needed.
Laboratory practical	Laboratory practices will be carried out, and they will include questions or exercises, which must be submitted for evaluation. This activity is mandatory to pass the course.
Mentored work	Topics related to the contents of the course will be proposed to the students, so that they prepare an individual or group work on any of them.
Lecturing	It will consist of the exposition of the contents of the course, based on the proposed bibliography and the documentation provided on the FAITIC platform

Personalized assistance	
Methodologies	Description

Lecturing	Personalized attention to students will be provided for all activities in the course, in the hours scheduled for tutorials.
Problem solving	Personalized attention to students will be provided for all activities in the course, in the hours scheduled for tutorials.
Laboratory practical	Personalized attention to students will be provided for all activities in the course, in the hours scheduled for tutorials.
Mentored work	Personalized attention to students will be provided for all activities in the course, in the hours scheduled for tutorials.

Assessment		Description	Qualification	Training and Learning Results		
Laboratory practical	Attitude, participation and quality of the work carried out in the laboratory will be considered. In addition the student will respond to questions raised in each of the practices, and deliver the required lab reports.		20	B3 B4	C4	D9 D16 D17
Problem and/or exercise solving	Partial tests will be carried out, which will include short answer questions and problems, for the evaluation of the skills acquired in relation to the contents of the course.		30	B3	C4	D9 D16
Presentation	The quality of the contents of the delivered work will be evaluated, together with the presentation and the answers to the questions.		20	B3 B4	C4	D10 D16 D17
Objective questions exam	There will be a final exam, which will include short questions and problems, to evaluate the acquisition of the competences of the course.		30	B3 B4	C4	D2 D9 D16

Other comments on the Evaluation

1. Considerations on continuous evaluation.

- The participation of the student in any of the acts of evaluation of the course will imply the condition of presented and, therefore, the assignment of a qualification.
- Attendance at a minimum of 80% of laboratory practices is mandatory, which cannot be rescheduled.
- To pass the course, students must obtain at least a score of 5 points out of 10 in all the evaluation sections (laboratory practices, project, partial exam, final exam). So, the overall qualification required to pass the course, resulting from the weighted sum of all the evaluation sections, will be 5 points out of 10.
- Students may waive the continuous assessment system through the procedure and within the period established by the School. If such resignation is requested and authorized, 100% of the grade will be assigned by taking a final exam, in which questions can be asked about all the topics taught in the course, including those corresponding to practical classes.

2. Considerations about the exams (partial and final).

- **Partial exam.** During the course there will be a partial and eliminatory test, which will include short questions and problems or exercises, and which will have a weight in the overall grade of 30 %. To pass this test, a score of at least 5 points out of 10 must be obtained.
- **Final exam 1st opportunity.** It will include the contents not evaluated in the partial test, and will have a relative weight of 30 % in the overall grade of the course. In case of not having passed the partial test, the students will be given the opportunity to repeat the evaluation of the corresponding contents, on the same date assigned for the final exam.
- **Final exam 2nd opportunity.** The exam may put forward questions about all the subjects taught in the course, including those corresponding to practical classes. Students who have obtained the minimum qualification established in this guide for the various evaluation sections (laboratory practices, project, partial exam), may only be assessed for the rest of the content.

3. Considerations on the qualification records

- **1st opportunity qualification record.** The global mark will be the weighted sum of those obtained in all the assessments carried out (laboratory practices, memory and presentation of project, written exams), provided that the minimum required grades have been passed. In case of failing or not showing up for the partial and/or final exam, the record will reflect the Fail rating, with a numerical value resulting from the weighted sum of the laboratory practices and the project, applying the global grade contribution percentages specified in this guide; the contents approved in these two sections will be considered as passed with a view to the 2ndopportunity qualification record.
- **2nd opportunity qualification record.** The global mark will be the weighted sum of those obtained in all the assessments carried out, provided that the minimum required marks have been passed.In case of failing or not taking the final exam, the record will reflect the Fail grade, with a numerical value resulting from the weighted sum of the laboratory practices and the project, applying the global grade contribution percentages specified in this guide

4. Ethical considerations

The student is expected to exhibit an adequate ethical behavior. In case of detecting unethical behavior (copying, plagiarism, use of unauthorized electronic devices, and others), it will be considered that the student does not meet the necessary requirements to pass the subject. In this case, the overall grade in the current academic year will be Fail (0.0).

The use of any electronic device during the evaluation tests will not be allowed unless expressly authorized. The introduction of a non-authorized electronic device in the exam room will be considered a reason for not passing the subject in this academic year and the overall rating will be Fail (0.0)

General description	Since ancient times, man has used biotechnological processes to obtain products of interest. Currently, the biotechnology sector is one of the areas that is experiencing the greatest growth, which entails the need to select, within a space of possibilities, those alternatives that, based on a predetermined criterion, allow meeting the desired objectives . The search for a formal approach to the design problem promotes the need to find mathematical models that fit the empirical data and that allow greater ease in the optimization and simulation of these processes. All this will result in greater efficiency and ease of control of the diversity of biotechnology-based processes. English Friendly subject: International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

Training and Learning Results

Code

- B3 CG3 Knowledge in basic and technological subjects that will enable students to learn new methods and theories, and provide them the versatility to adapt to new situations.
- B4 CG4 Ability to solve problems with initiative, decision making, creativity, critical thinking and the ability to communicate and transmit knowledge and skills in the field of industrial engineering specializing in Industrial Chemistry.
- B6 CG6 Capacity for handling specifications, regulations and mandatory standards.
- B10 CG10 Ability to work in a multidisciplinary and multilingual environment.
- C19 E19 Knowledge of mass and energy balances, biotechnology, mass transfer, separation operations, chemical reaction engineering, reactor design, and recovery and processing of raw materials and energy resources.
- C21 CE21 Ability to design and management procedures applied experimentation, especially for the determination of thermodynamic and transport properties, and modeling of phenomena and systems in the field of chemical engineering, systems with fluid flow, heat transfer, mass transfer operations, kinetics of chemical reactions and reactors.
- C22 CE22 Ability to design, manage and operate simulation procedures, control and instrumentation of chemical processes.
- D2 CT2 Problems resolution.
- D6 CT6 Application of computer science in the field of study.
- D8 CT8 Decision making.
- D9 CT9 Apply knowledge.
- D10 CT10 Self learning and work.
- D14 CT14 Creativity.
- D15 CT15 Objectification, identification and organization.
- D17 CT17 Working as a team.

Methodologies

	Description
Introductory activities	In this activity the different parts and topics developed during the course will be presented to the students, as well as the aims, competences and evaluation criteria. Likewise, the project case will be given to different groups and the way to tackle it will be explained
Lecturing	Lecturing will be structured by following the contents distribution in a sequential manner, and highlighting the foundations and more difficult parts to be understood by the students. The lecturer will facilitate, through moovi platform, the material required for a correct follow-up of the matter. The student will have to work on the material prior to the lecture and consult the recommended bibliography to complete the information.
Mentored work	Along the course, the students will develop a work consisting in modelling and simulating a biotechnological plant, based on scientific literature and laboratory data. A report must be carried out where all the details, simulation, modelling, data discussion, control strategy, plans, etc. are included.
Laboratory practical	The students will perform laboratory experiments , and all the required material will be available for them in the laboratory to ease their ability to sucessfully carry out biotechnological tasks like media preparation, enzyme determination, plate culturing or bioreactor set up. They will also perform visits to important biotechnological companies from our surroundings like Lonza Biologics. The student will prepare a final report in which the main results and conclusions must be collected, in accordance with a guide that will be facilitated them through the platform tem@.
Presentation	The students will make a public defence on the simulation projects, and will be evaluated by a jury composed by lecturers from the department of chemical engineering and/or professionals from the private sector in the field of the chemical engineering

Personalized assistance

Methodologies	Description

Lecturing	During the tutorships, individually or in groups, the student may ask the lecturer about any doubt posed on the matter. Likewise, the students also will be able to do queries to the professor through the moovi platform or by email. The lecturer will inform on the available schedule in the presentation of the matter and in moovi platform
Mentored work	During the tutorships, individually or in groups, the student may ask the lecturer about any doubt posed on the matter. Likewise, the students also will be able to do queries to the professor through the moovi platform or by email. The lecturer will inform on the available schedule in the presentation of the matter and in moovi platform
Presentation	During the tutorships, individually or in groups, the student may ask the lecturer about any doubt posed on the matter. Likewise, the students also will be able to do queries to the professor through the moovi platform or by email. The lecturer will inform on the available schedule in the presentation of the matter and in moovi platform

Assessment

	Description	Qualification	Training and Learning Results			
Mentored work	During some sessions, the students will develop a work on a biotechnological process that will be exposed in front of a jury, that will evaluate it in accordance with some quality criteria	25	B4 B6 B10	C19 C21 C22	D2 D6 D8 D9 D10 D14 D15 D17	
Laboratory practical	The students will develop laboratory practices on biotechnological processes, going from data obtaining to process modelling and simulation. After the practical session, a report must be delivered where the main results are critically discussed	15	B3 B6	C19	D2 D6 D8 D9 D14 D17	
Presentation	The project will be exposed to a jury composed by lecturers and/or professionals from private companies of chemical engineering.	20	B4 B6 B10		D2 D6 D8 D14 D15 D17	
Essay questions exam	A global evaluation of the competencies described in the matter will be carried out at the end of the teaching period. To pass the exam, the students will have to get a minimum of 50% of the maximum mark.	40	B3 B4 B10	C19 C21 C22	D2 D6 D8 D9 D10 D14 D15 D17	

Other comments on the Evaluation

The participation of the student in any of the evaluation activities involve that she/he will be subjected to assessment and involves a "presented" mark. A total of 5 points out of 10 should be reached to pass the subject. Analogously, the essay questions exam must be qualified with 5 out of 10 to pass the subject. It is expected that the student shows an ethical behaviour in what it concerns to copy, plagiarism, utilisation of unauthorised electronic devices or commitment with the team work. Otherwise, it will be considered that the student does not meet the indispensable requirements to pass the matter. In this case, the global qualification in the present academic course will be "fail" (0). Finally, the utilisation of any electronic device during the evaluation will not be allowed except for explicit permission. In case of detecting his presence in the classroom during the examination the student will be assessed with a global mark "fail".

Essay questions exam	2	10	12
Problem and/or exercise solving	2	10	12

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Description	
Lecturing	Theoretical class in which the professor will expose the most notable appearances of each subject, taking like base the available documentation in the platform Tema.
Mentored work	The students will make a work related with the best available technicians applicable to a process. The main points that the students have to develop and the bibliography recommended will be indicated.
Presentation	The students will make an oral presentation of the work made and will answer to the questions made by the professor and by the other students.
Problem solving	Some exercises will be solved in class and others will be solved by the students and delivered ion time

Personalized assistance

Methodologies	Description
Problem solving	The students can solve any doubts during the assigned hours.
Mentored work	The work will be monitored along the course.

Assessment

Description		Qualification Training and Learning Results		
Mentored work	The students will realise and will deliver the work assigned.	10	B7	D9 D10 D17
Presentation	The students will realise an oral presentation of an assigned work	10	C16	D9
Problem solving	The students will have to realise and deliver the exercises proposed.	15	B4 B7	C16 D2 D9
Essay questions exam	The students will realise an exam of all the subject	25	B7	C16 D9
Problem and/or exercise solving	It will make a proof of practical application on management of waste	40	B4	C16 D2 D9

Other comments on the Evaluation

It is precise to reach a minimum grade of 3,5/10 in each one of the sections evaluable.

Second opportunity: the qualifications of the sections mentored work, presentation and problem solving will be maintained

The students that renounce to the continuous evaluation have to make an examination of all the matter in the date fixed by the EEI for these exams

Commitment ethic: it expects that the student present a behaviour ethic suitable. In the case to detect a behaviour no ethic (copy, plagiarism, use of devices unauthorised, and others) it will be considered that the student fails to meet the necessary requirements to pass the matter. In this case the qualification in the present course will be failing grade (0.0).

General description	O Traballo de Fin de Grao (TFG) é un traballo orixinal e persoal que cada estudiante realizará de forma autónoma baixo tutorización docente, e debe permitirlle mostrar de forma integrada a adquisición dos contidos formativos e as competencias asociadas ao título. A súa definición e contidos están explicados de forma más extensa no Regulamento do Traballo Fin de Grao aprobado pola Xunta de Escola da Escola de Enxeñaría Industrial o 21 de xullo de 2015.			

Resultados de Formación e Aprendizaxe

Code

B1	CG1 Capacidad para a redacción, sinatura e desenvolvemento de proxectos no ámbito da enxeñaría industrial, que teñan por obxecto, segundo a especialidade, a construcción, reforma, reparación, conservación, demolición, fabricación, instalación, montaxe ou explotación de: estruturas, equipos mecánicos, instalacións enerxéticas, instalacións eléctricas e electrónicas, instalacións e plantas industriais, e procesos de fabricación e automatización.
B2	CG2 Capacidad para a dirección das actividades obxecto dos proxectos de enxeñaría descritos na competencia CG1.
B3	CG3 Coñecemento en materias básicas e tecnolóxicas que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacions.
B4	CG4 Capacidad para resolver problemas con iniciativa, toma de decisións, creatividade, razonamento crítico e capacidade para comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial na mención de Química Industrial.
B10	CG10 Capacidad para traballar nun medio multilingüe e multidisciplinar.
B12	CG12 Exercicio orixinal a realizar individualmente e presentar e defender ante un tribunal universitario, consistente nun proxecto no ámbito das tecnoloxías específicas da Enxeñaría Industrial no campo de Química Industrial de natureza profesional no que se sinteticen e integren as competencias adquiridas nos ensinos.
D4	CT4 Comunicación oral e escrita de coñecementos en lingua estranxeira.
D12	CT12 Habilidades de investigación.
D13	CT13 Capacidad para comunicarse por oral e por escrito en lingua galega.

Topic

Proxectos clásicos de enxeñería	Poden versar, por exemplo, sobre o deseño e mesmo a fabricación dun prototipo, a enxeñaría dunha instalación de producción, ou a implantación dun sistema en calquera campo industrial. Polo xeral, neles desenvólvese sempre a parte documental da memoria (cos seus apartados de cálculos, especificacións, estudos de viabilidade, seguridade, etc. que se precisen en cada caso), planos, prego de condicións e orzamento e, nalgúns casos, tamén se contempla os estudos propios da fase de execución material do proxecto.
Estudos técnicos, organizativos e económicos	Consistentes na realización de estudos relativos a equipos, sistemas, servizos, etc., relacionados cos campos propios da titulación, que traten un ou máis aspectos relativos ao deseño, planificación, producción, xestión, explotación e calquera outro propio do campo da enxeñaría, relacionando cando cumpla alternativas técnicas con avaliaciós económicas e discusión e valoración dos resultados.
Traballos teórico-experimentais	De natureza teórica, computacional ou experimental, que constitúan unha contribución á técnica nos diversos campos da enxeñaría incluíndo, cando cumpla, avaliación económica e discusión e valoración dos resultados.

Metodoloxía docente

	Description
Actividades introductorias	O alumno realizará, de forma autónoma, unha procura bibliográfica, lectura, procesamento e elaboración de documentación.
Traballo tutelado	O estudiante, de maneira individual, elabora unha memoria segundo as indicacións do Regulamento do Traballo Fin de Grao da EEI.
Presentación	O alumnado debe preparar e defender o traballo realizado diante dun tribunal de avaliación segundo as indicacións do Regulamento do Traballo Fin de Grao da EEI.

Atención personalizada

Methodologies Description

Traballo tutelado	Cada alumno terá un tutor e/ou un co-tutor encargados de guiarlle, e que lle marcarán as directrices oportunas para realizar o TFG.

Compromiso ético: Espérase que o alumno presente un comportamento ético adecuado. No caso de detectar un comportamento non ético (copia, plaxio ou outros) considerarase que a cualificación global no presente curso académico será de suspenso (0.0).

Requisitos: Para matricularse no Traballo Fin de Grao é necesario superar ou ben estar matriculado de todas as materias dos cursos inferiores ao curso no que está situado o TFG.

Información importante: No momento da defensa do TFG, o alumno deberá ter todas as materias restantes do título superadas, tal como establece o artigo 7.7 do Regulamento para a realización do Traballo Fin de Grao da Universidade de Vigo.

A orixinalidade da memoria será obxecto de estudo mediante unha aplicación informática de detección de plaxios.

General description	Mediante a realización de prácticas en empresa o alumno poderá aplicar os coñecementos e as competencias adquiridas durante os seus estudos, o que permitirá complementar e reforzar a súa formación e facilitar a súa incorporación ao mercado laboral.			

Resultados de Formación e Aprendizaxe

Code	
B1	CG1 Capacidad para a redacción, sinatura e desenvolvemento de proxectos no ámbito da enxeñaría industrial, que teñan por obxecto, segundo a especialidade, a construcción, reforma, reparación, conservación, demolición, fabricación, instalación, montaxe ou explotación de: estruturas, equipos mecánicos, instalacións enerxéticas, instalacións eléctricas e electrónicas, instalacións e plantas industriais, e procesos de fabricación e automatización.
B2	CG2 Capacidad para a dirección das actividades obxecto dos proxectos de enxeñaría descritos na competencia CG1.
B3	CG3 Coñecemento en materias básicas e tecnolóxicas que os capacite para a aprendizaxe de novos métodos e teorías, e os dote de versatilidade para adaptarse a novas situacions.
B4	CG4 Capacidad para resolver problemas con iniciativa, toma de decisións, creatividade, razonamento crítico e capacidade para comunicar e transmitir coñecementos, habilidades e destrezas no campo da enxeñaría industrial na mención de Química Industrial.

Resultados previstos na materia

Expected results from this subject	Training and Learning Results
Capacidade para adaptarse ás situacions reais da profesión.	B1 B2 B3 B4
Integración en grupos de traballo multidisciplinares.	B2 B3 B4
Responsabilidade e traballo autónomo.	B1 B2 B3 B4

Contidos

Topic	
Integración nun grupo de traballo nunha empresa.	O alumno integrarase no contexto organizativo dunha empresa, téndose que coordinar cos diferentes membros do grupo de traballo ao que sexa asignado.
Realización de actividades ligadas ao desempeño da profesión.	Ao alumno encomendaráselle unha serie de tarefas relacionadas cos coñecementos e coas competencias dos seus estudos.

Metodoloxía docente	
	Description
Prácticum, Practicas externas e clínicas	O alumno integrarase nun grupo de traballo nunha empresa onde terá a oportunidade de poñer en práctica os coñecementos e as competencias adquiridas durante os seus estudos, e así complementar e reforzar a súa formación.

Atención personalizada	
Methodologies	Description
Prácticum, Practicas externas e clínicas	O alumno dispoñerá dun titor na empresa onde fará a súas prácticas e dun titor académico.

Avaliación		Description	Qualification	Training and Learning Results
Prácticum, Practicas externas e clínicas	Os estudiantes en prácticas deberán manter un contacto continuado non só co seu titor na empresa, senón tamén co seu titor académico.	100	B1 B2	
	Ao concluir as prácticas, os alumnos deberán entregar ao seu titor académico unha memoria final e o informe en documento oficial D6-Informe do estudiante.		B3	
	Na avaliación terase en conta a valoración do desempeño do alumno realizada polo titor na empresa, o seguimiento realizado polo titor académico e os informes entregados polo alumno.		B4	

Other comments on the Evaluation	
Adicionalmente ao xa exposto nesta guía docente é preciso facer as seguintes aclaracións:	
1º. Esta materia rexerase polo establecido no Regulamento de Prácticas en Empresa da EEI (http://eei.uvigo.es/opencms/export/sites/eei/eei_gl/documentos/escola/Normativa/practicas_empresa.pdf).	
2º. A Escola fará pública a oferta de prácticas en empresa curriculares entre as que o alumnado, que cumpra os requisitos descritos no artigo 6 do citado regulamento, deberá facer a súa escolla dentro do prazo fixado ao efecto. O procedemento de realización de prácticas en empresa curriculares está establecido no artigo 7 do regulamento.	
3º. A duración das prácticas pode chegar a ser ata de un máximo de 240 horas, para que o alumno saque o maior proveito da súa estadía na empresa. Será a empresa na súa oferta de prácticas a que estipulará a duración das mesmas.
